Presented to the Legislature, 28th April, 1922. *Mr. Stover. Not Printed.*
- No. **88** Return to an Order of the House of April 29th, 1921. That there be laid before this House, a return of copies of all Correspondence between R. T. Harding and the Honourable the Attorney-General, or any other Minister of the Crown, or any Officer of the Government since March 1st, 1921, with reference to a certain account for \$500 rendered James Hourigan & Co. by the said R. T. Harding, and also copies of all letters from Crown Timber Agent Wylie since 1st June, 1920, referring to the settlement with James Hourigan & Co. for \$12,600. Presented to the Legislature, 1st May, 1922. *Mr. Hill. Not Printed.*
- No. **89** Report of the Mothers' Allowances Commission for the year 1921. Presented to the Legislature, 3rd May, 1922. *Printed.*

- No. **90** Return to an order of the House of 12th April, 1922. That there be laid before this House, a Return of all copies of all correspondence, memoranda and reports between the Toronto and Hamilton Highway Commission and the Minister of Public Works or any member of the Government since November 15th, 1919. Presented to the Legislature, 11th May, 1922. *Mr. Henry. Not Printed.*
- No. **91** Report of the Ontario Civil Service Commissioner for the year 1921. Presented to the Legislature, 12th May, 1922. *Printed.*
- No. **92** Statement showing sums credited to The Highway Improvement Fund and all payments chargeable thereto as of October 31st, 1921. Presented to the Legislature, 12th May, 1922. *Not Printed.*
- No. **93** Report of the Soldiers' Aid Commission of Ontario for the year 1921. Presented to the Legislature, 16th May, 1922. *Not Printed.*
- No. **94** Statements showing all sums credited to the Highway Improvement Fund and all payments chargeable thereto for the fiscal years ending October 31st, 1920, and 1921, respectively. Presented to the Legislature, 23rd May, 1922. *Not Printed.*
- No. **95** Return to an Order of the House of 9th February, 1921, That there be laid before this House, a Return of copies of all letters of instruction or other correspondence from the Attorney-General or any of the members of the Government, or Officials, addressed to any Police Magistrates or Crown Attorneys in the Province of Ontario; and any communications or letters in reply thereto relating to the imposition of penalties, or the trial of cases, and their disposition under The Ontario Temperance Act and amendments thereto. Presented to the Legislature, 30th May, 1922. *Mr. Dewart. Not Printed.*
- No. **96** Return to an Order of the House of 25th May, 1922, that there be laid before this House, a Return showing (1) What Legislative Grants were earned in each of the years 1920 and 1921 by (a) Rural Public Schools, (b) Rural Separate Schools, (2) What was the actual amount paid to each Rural Public and Separate School for the said years. Presented to the Legislature, 6th June, 1922. *Mr. Cooke. Printed.*
- No. **97** Report of the Agricultural Development Board for the year 1921. Presented to the Legislature, 8th June, 1922. *Not Printed.*
- No. **98** Copies of Order-in-Council designating, pursuant to section 14 of the Hospitals and Charitable Institutions Act, Hospitals, Refuges, Orphanages and Infants' Homes to which aid may be granted. Presented to the Legislature, 8th June, 1922. *Not Printed.*

-
- No. **99** Return to an Order of the House of 29th April, 1921, That there be laid before this House, a Return of copies of all correspondence, reports and documents, relating to the dismissal of Magistrate Hastings, of Dunnville. Presented to the Legislature, 9th June, 1922. *Mr. Price. Not Printed.*
- No. **100** Return to an Order of the House of the 20th March, 1922, that there be laid before the House a Return of copies of all correspondence between any Minister of the Crown and any member of the Hydro-Radial Commission in connection and dealing with accounts for remuneration of services by each and every member of the Commission whether such accounts were paid in full for the amount claimed or reduced in amount. Presented to the Legislature, 9th June, 1922. *Mr. Hay. Not printed.*
- No. **101** Return to an Order of the House of the 24th February, 1922, that there be laid before the House a Return of all papers, documents, memoranda, recommendations, letters, telegrams and communications of every kind between any Municipal corporations, associations, bodies or persons and the Prime Minister or any Minister of the Government regarding the appointment or suggestion to appoint Peter Heenan, M.P.P. for Kenora, a Member of the Hydro-Electric Power Commission of Ontario. Presented to the Legislature, 9th June, 1922. *Mr. Thompson. Not Printed.*

Statement of Secretary and Law Clerk....	69

To His Honour, HENRY COCKSHUTT, ESQ.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

As required by law I submit for the information of Your Honour and the Legislative Assembly, the Annual Report of the works under the control of the Public Works Department, comprising the Reports of the Deputy Minister, the Architect, the Engineers, the Accountant and Law Clerk, for the twelve months ending the 31st of October, 1921.

Respectfully submitted,

F. C. BIGGS,

Minister of Public Works and Highways.

Department of Public Works, Ontario,
Toronto, March 6th, 1922.

REPORT

OF THE

Deputy Minister of Public Works

Toronto, March 6th, 1922.

HONOURABLE F. C. BIGGS,

Minister of Public Works and Highways.

SIR,—I have the honour to transmit the reports of the Provincial Architect, the Provincial Engineer, the Secretary and Law Clerk and the Accountant of the Public Works Department regarding the works carried on by the Department for the fiscal year ending October 31st, 1921.

The repairs and maintenance of the Parliament and Departmental Buildings includes the properties in the city used for offices by several departments of Government. Spadina House (Old Knox College building) is occupied by the Department of Labour and Health, and the Registrar-General branch of the Provincial Secretary, the rental, fuel, water and light, and cleaning of building being charged to the repair and maintenance appropriation. The maintenance and repair of No. 46 Richmond Street West, numbers 5, 15, 17 and 47 Queen's Park, also the rental of part of the McLean Publishing Company's building on University Avenue is also chargeable to repair and maintenance appropriation.

The principal buildings under construction during the year are as follows:

PARLIAMENT AND DEPARTMENTAL BUILDINGS.—To provide additional accommodation for the Departments of Government, No. 47 Queen's Park, purchased in 1920, was fitted up for the Ontario Railway and Municipal Board. A hearing room was constructed on the north side of the building with an entrance from St. Albans Street, large vaults were also built for the safety of important documents and maps and some slight changes made in the partitions. The building makes very convenient and comfortable quarters for the Board. The old Knox College building at Spadina Crescent, rented in October, 1920, has been converted into an admirable building for offices and laboratories of the Department of Labour and the Provincial Board of Health. Large vaults and fireproof offices for the Registrar-General's branch were constructed, making safe housing for the vital statistics of the Province and bright fireproof working rooms for the officials in charge. No. 25 Queen's Park, purchased in June, 1921, from the Trustees of St. Michael's College, is being fitted up for the Ontario Board of License Commissioners and staff, and the Provincial Police.

EDUCATIONAL BUILDINGS.—The work upon the reconstruction of the main building for the School for Deaf, Belleville, has made good progress. The front part of the new building is nearing completion, after which the old building may be taken down and work on the new building continued until fully completed. Extensive changes are being made in the Normal School building at Toronto, to improve the general plan and give better lighting to the classrooms. The English-French Training School at Sturgeon Falls was completed and occupied after the Easter holidays. The Architect's branch of the Department has given much time in advising the Inspector of Public and Separate Schools in the designing of public schools. The Architect has also given much time in inspection of plans of Technical Schools in several parts of the Province.

AGRICULTURAL BUILDINGS.—The main building, containing the classrooms for the Ontario Agricultural School at Kemptville, was completed shortly after the close of the fiscal year 1920. The Students' Residence building was commenced early in the year and completed in an expeditious manner during the year. These buildings were erected from the Federal subsidy for the encouragement of agriculture. A new veterinary college building and a new dairy building are in course of erection at the Ontario Agricultural College, Guelph, and good progress has been made.

PUBLIC INSTITUTION BUILDINGS.—The work of construction at the Ontario Hospital, Whitby, has been continued steadily throughout the year. The Acute Hospital for women is completed and ready for occupation. The Acute Hospital for men is roofed in and the interior work well advanced. A number of cottages for guards were completed and occupied early in the year. The construction works being carried on by the Public Works Department at Burwash Industrial Farm were completed early in the year and the buildings transferred to the Provincial Secretary's Department. The building and equipment are in excellent condition. The work of reconstruction of Orchard House at the Ontario Hospital, Hamilton, after the fire, was completed and equipped and occupied before the end of the fiscal year, the new work being of fireproof construction.

DISTRICT BUILDINGS.—The work on the new Court House at Sault Ste. Marie was suspended for some time. In the spring of 1920 the contractors were unable to proceed owing to the great advance in prices of labour and materials. The Department paid them for the work done by them and revised the plans and specifications and let a new contract on March 15th, 1921. The work has been pushed on vigorously and excellent progress made.

More extended reference to the above and other buildings will be found in the Architect's report.

The Engineers' Branch of the Public Works Department has charge of inland navigation in the Province, the construction of bridges in Northern Ontario and parts of counties bordering on the unorganized districts, the construction of drainage in Northern Ontario and the inspection of drainage under the Provincial Drainage Aid Act. The weather conditions for public works were very favourable during 1921. The navigation works undertaken during the year consisted of dredging in the Huntsville chain of lakes, the canal between Peninsula and Fairy Lakes has been completed, also the work in the Muskoka River between Fairy and Marys Lake. Extensive repairs were

made to the docks at Port Carling. The bridges constructed consist of six steel bridges, twenty-five concrete bridges and eighty-five timber bridges varying in length from twenty feet to four hundred feet. Drainage works costing \$30,000 were constructed by the Department and many drainage schemes in older Ontario were inspected by the Engineer of the Department.

The report of the Secretary and Law Clerk will give a list of contracts entered into during the fiscal year. The report of the Accountant will give the expenditure by the Department under the Supply Bill.

I have the honour to be,

Sir,

Your obedient servant,

R. P. FAIRBAIRN,
Deputy Minister of Public Works.

REPORT OF ARCHITECT.

HONOURABLE F. C. BIGGS,

Minister of Public Works and Highways.

SIR,—I have the honour to report on the works carried on and works completed during the past fiscal year ending October 31st, by the Architect's Branch of your Department.

GOVERNMENT HOUSE.—Only such repairs as were necessary were made to the residence and outbuildings, including the lodge, employees' houses and greenhouses. The buildings were suitably decorated for the farewell reception of His Excellency the Duke of Devonshire. The grounds, walks, drives and gardens have been kept in good order.

PARLIAMENT BUILDINGS.—Repairs have been made, as required from time to time, to the buildings and equipment, several minor alterations having been made in the north wing, necessitated by the removal of the Board of Health and Registrar-General's Branch of the Provincial Secretary's Department, to the offices prepared for them in the Government Office Building, formerly known as Old Knox College, now called Spadina House. In this building, the offices formerly occupied by them on the first floor of the north wing of the Parliament Buildings have been handed over to the Department of Education and the Deputy Provincial Registrar, and have relieved to a considerable extent the overcrowded and congested condition of this part of the building. Improvements and additions were made to the heating, ventilating and lighting of the building.

The offices of the Department of Labour have been removed from No. 15 Queen's Park and No. 46 Richmond Street West, to Spadina House, being located on the first and second floors, including the Factory Inspectors and Boiler Inspectors. The offices formerly occupied by these Departments at No. 46 Richmond Street West have been allotted to the Mothers' Allowance Commission, who have recently moved to their new quarters.

The alterations, additions and improvements to No. 47 Queen's Park were completed and the building occupied by the Ontario Railway and Municipal Board early in the year.

The addition to the garage, No. 15 Queen's Park, was completed and the building occupied in December.

KNOX COLLEGE.—The old Knox College Building, located on Spadina Crescent, which has been leased by the Government, has been remodelled and an addition erected to the north-east wing, to give vault and office accommodation for the Registrar's Branch of the Provincial Board of Health and fully equipped laboratories have been provided for this Department on the first second and third floors of the north-west wing. The laboratories in connection with the Board of Health at No. 5 Queen's Park, have been moved to this building. The space formerly occupied by them at No. 5 Queen's Park is now occupied by the Mines Department, who now occupy the whole of this building. The whole of the offices of the Provincial Board of Health and Registrar's Department have been moved to the apartments prepared for them in this building.

OSGOODE HALL.—The buildings have been kept in good repair, about the usual amount of painting having been done to the corridors and offices. The grounds have been kept in their usual good order.

PUBLIC INSTITUTIONS.

The only work carried out by this Department at the Institutions, with the exception of the Ontario Hospital, Whitby, consisted of the reconstruction of the Orchard House, Ontario Hospital, Hamilton, which was damaged by fire on the 23rd of February, the roof of the upper storey being demolished by fire and the whole of the upper storey destroyed, with the exception of the brick walls, of which it was only necessary to take down a few courses and rebuild. Considerable damage was done by water to the floors below. A number of chimneys, however, had fallen, and several had to be taken down. The whole of the work was rebuilt in good time and considerable improvements made in the reconstruction of the upper floor, with a view to providing against damage by fire. The whole of the ceilings of the upper floor have been covered with a cement slab, as the fire originated in the roof, as have several other fires at our Institution. Work was done under day labour, all materials being purchased by tender by this Department.

A new water supply system has been installed at the Ontario Hospital, Kingston, the work being done under the supervision of your Engineer, Mr. Halford. Considerable work was done by our electricians in laying new conduit for electric wiring on the grounds and buildings.

A fire alarm and fire protection system has been installed by our electricians at the Ontario Hospital, Orillia. The renewal of fixtures in the main building has been completed. An activated sludge sewage disposal system has been installed in the grounds of this Institution, through which the sewage from the whole of the buildings is passed. This work was done under the supervision of Mr. Allen, of this Department, under the direction of Mr. Dallyn, Sanitary Engineer for the Provincial Board of Health. The apparatus is working satisfactorily.

Steam boilers and machinery at the Institution have been inspected and reported on by Mr. W. H. Bradt, Boiler Inspector of this Department, who has also supervised the erection of boilers, etc.

ONTARIO HOSPITAL, WHITBY.—Work was continued on the Acute Hospital for Women, which is about finished and can be occupied whenever required. Good progress has been made with the Acute Hospital No. 2 for men, the excavations for foundations being commenced in December. At the time of writing this building is roofed. The plumbing and heating is well under way, temporary heat being provided for, and the work will be continued throughout the winter, and the building will be ready for service by June 1st.

The tunnel for steam and other piping leading from the power plant to No. 1 Acute Hospital has been completed. Another tunnel, connecting Nos. 1 and 2 Acute Hospitals, has also been completed. The grounds surrounding these buildings have been graded and walks and roads leading thereto have been laid.

A great deal of attention has been given the other portions of the grounds, including grading, sodding and planting. This work will be continued next season.

INDUSTRIAL FARM, BURWASH.—All of the work at this Institution, which was being carried out by this Department, has been completed and handed over to the Provincial Secretary's Department, who are now responsible for the care of same.

EDUCATIONAL.

The Normal Schools in Hamilton, Stratford and North Bay and the Normal and Model Schools in Toronto and Ottawa, have received the necessary attention of the officials of your Department. Repairs and alterations have been made as required.

NORMAL AND MODEL SCHOOL, TORONTO.—Extensive alterations have been commenced in this building, the intention being to remove the Normal School from the North Building to the front building (the original Normal School) and the Model School to the north building. It is proposed to demolish the present Model School building which obstructs the light on the north and south sides of the other buildings respectively, and erect a one-storey building between the two with space enough on each side to give ample light to the other buildings.

The Compensation Board have removed from this building to more commodious offices in the Bond Building, Richmond and Sheppard Streets, the rooms vacated by them having been changed into class-rooms and offices for the School.

The Ontario College of Art has also removed its studios, located on the third floor, to the addition recently built to the Grange. A portion of the Museum on the second floor has been moved to the rooms vacated by the College of Art.

A large amount of work is entailed in connection with these alterations in removing the exhibits of the Museum and re-decorating the whole of the building. Additional furniture is also being supplied to the class-rooms.

Preliminary plans are also being prepared for the proposed extension of the Model School (north building), giving accommodation for four additional class-rooms.

TRAINING SCHOOL, STURGEON FALLS.—Plans and specifications were prepared for this building, tenders called for and the contract awarded to Jeffrey & Stevens, Contractors, North Bay, for general trades. Contract for plumbing and heating was awarded to McKelvey & Birch, of Kingston. The building has been completed and fully furnished.

ONTARIO SCHOOL FOR DEAF, BELLEVILLE.—Work was resumed on the portion of the new main building (which was commenced last year) early in the spring. Good progress has been made with the work, the building has been roofed in and plastering is well under way. Steam heat is on in the building and work will be continued through the winter, and the building will be ready for occupation by next May. Plans have been prepared for the completion of the building. Owing to the unsatisfactory carrying on of the work done last year under contract, it was decided that the Department should carry out the work, purchasing all materials and hiring the men. This has been done so far as the stone, brick work and carpentry work is concerned, and has proved to be most satisfactory in every way. Capable foremen were

employed and labour troubles avoided. The work being done under contract includes roofing by Douglas Bros., of Toronto; steam heating and plumbing by Messrs. McKelvey & Birch, of Kingston; plastering by A. D. Grant, of Toronto; painting by Hart Brothers, of Belleville; the electric wiring by the Toronto Electric Co., of Toronto; iron stairs by the Canadian Ornamental Iron Work, of Toronto; marble, tile and terrazzo flooring by the Italian Mosaic & Tile Co., of Toronto; and mastic flooring by the Vulcan Asphalt and Supply Co. The building is two stories and basement in height, is designed in the Tudor Gothic style of architecture, consisting of a centre building and two wings, and is being built within 12 feet of the old main building, which will be demolished as soon as this portion of the new building is finished. The main entrance is in the centre of the lower front facade leading to a vestibule, from thence to the reception room, the floor at this portion being of tile. A cross corridor extends through the centre building with connecting corridors in the wings. The main staircase is located in the centre of the building, is of steel with marble steps and lighted by stained glass windows on the landing in the centre building. Provision is made for the Principal's and Bursar's offices on the first floor; the library and teachers' room are located on the upper floor in this part of the building. The building in all contains 22 class-rooms and when the wings are completed, will give eight more, making thirty in all, giving accommodation for 350 pupils. Ample play rooms, well lighted, are provided in the basement, the floors being of mastic. Good progress has been made with the work, and when completed it will be one of the most up-to-date of our educational buildings, in all of its appointments. Special attention has been paid to the heating and ventilating equipment, which has been designed by Mr. Melvern F. Thomas, C.E., who is also supervising the work.

Plans are being prepared for a new dining hall to accommodate 350, and a kitchen in connection with the main building, to take the place of the present dining hall and kitchen, which are inconvenient, badly lighted and too small to accommodate the increasing number of pupils. The dining hall, kitchen, bakery and cold storage will be under the same roof.

Plans are also being prepared for an Assembly Hall or Chapel, also in connection with the Main Building, with a seating capacity of 450 persons.

The main entrance drives and walks are being remodelled and relaid, particular attention being given to the planting of shrubs and laying out of flower beds. The buildings in connection with the School have been kept in good repair.

ONTARIO SCHOOL FOR BLIND, BRANTFORD.—Repairs to buildings have been given proper attention. Cement walks to grounds in front of the building commenced last year, have been completed, the work being done under contract by Mr. J. Bartle, of Brantford.

SCHOOL HOUSE AT MATHESON.—Plans and specifications were also prepared for a school house at Matheson, tenders were called for and the contract awarded to R. Wallace & Sons, Contractors, North Bay; the contract for plumbing and heating was awarded to A. Brazeau, of Timmins. This building has been completed and fully furnished.

TECHNICAL SCHOOLS.—Plans and specifications for the new Technical Schools being erected at Sudbury, Sarnia, Hamilton, Sault Ste. Marie and Windsor, were submitted by the Department of Education to your Department

for examination as to the structural work, which was figured out by the officials of this Department and reported on by myself. In each case structural changes were suggested by the Department, which the local architects agreed to and changed their plans in compliance therewith.

RURAL SCHOOLS.—The following work was done by this Department in connection with Public, Separate and Consolidated Schools for the Department of Education: Working drawings have been prepared for Schools at Mindemoya, Savard, Dorion, No. 13 Seneca, Nobel, Barwick, Swastika, Stratton, Benmiller, and additions to Hudson School; also for alterations to Oneida and Low Banks Rural Schools, and Community Halls to all three and four-roomed schools. The buildings at Mindemoya, Dorion, Nobel, Barwick, Stratton and Swastika are in course of erection and nearing completion. Considerable alterations were also made to the Northern Academy, Monteith.

Sketch plans have been prepared for extensions to New Liskeard Public School, Sturgeon Falls Separate School, Delhi, Tamworth, Manitowaning Public Schools, and for proposed school at Cache Bay, Porquois Junction, Eagle River, Bruce Mines, Ignace, Bethany, Warsaw, Pickerel Landing, Virgil, Welland, Wellington and Smoky Falls, besides a number of one-roomed rural schools, for which duplicate plans only have been sent.

Sixteen sets of plans for schools by other architects have been submitted and reported on. The following schools have been visited and reported on for dilapidation, ventilation and questions of heating: Charlton, Minden, Canfield, MacTier, No. 13 Seneca, New Liskeard and Navan. In all, eight sites for schools have been reported on in the various districts, including Porquois Junction, Gore Bay, Savard, Cache Bay and Benmiller. There have been twenty meetings held with School Boards, either here or at Schools throughout the Province, in connection with various matters affecting the schools enumerated above.

The above work, including the preparing of plans, specifications and supervision, was assigned to Mr. Geo. White, Assistant Architect, who is to be commended for the energy and interest he has displayed, and credit is due him for successfully carrying on the work.

AGRICULTURE.

ONTARIO AGRICULTURAL COLLEGE, GUELPH.—Plans and specifications were prepared for a new Veterinary College and for a new Dairy Building, tenders called for and contracts awarded for the work of same as follows:

Construction work (general trades), for both buildings, Messrs. Schultz Bros., of Brantford; heating, ventilation and plumbing of the Veterinary College to Messrs. Sheppard & Abbott, of Toronto; heating, ventilation and plumbing of Dairy Building, Messrs. Purdy, Mansell, Limited, of Toronto; electric wiring of Veterinary College, Canada Electric Co., of Toronto, and of the Dairy Building to The G. B. Grinyer Co., of Guelph, the lowest tender being accepted in all cases. Owing to the difficulty in procuring stone, the work on these buildings was much retarded for time; fair progress is now being made and the indications are that both buildings will be roofed in before the end of December, and, unless something unforeseen occurs, will be completely finished and furnished in time for the fall sessions in 1922.

AGRICULTURAL SCHOOL, KEMPTVILLE.—Plans and specifications were prepared for a residence for boys and girls in connection with this School, to accommodate about 100 students, conveniently located to the other buildings. Tenders were called for and the contract for structural work awarded to Messrs. Taylor & Lackey, of Ottawa, who have carried out their contract in a most satisfactory manner and in record time. Work was commenced in June and is now completed and the students are in residence. The contract for heating and ventilation was awarded to Messrs. Purdy, Mansell, Limited, of Toronto, who have also done their work in record time and in a satisfactory manner. The electric wiring and installation of fixtures were done by our own electricians. The building is built of cement foundation with brick superstructure, is two stories and basement in height, the upper storey plastered in stucco, the roof in blue slate, giving a very effective treatment. The building has a frontage of 160 ft., with wings extending 60 ft. at each end; a large dining hall with kitchen in the rear of same is located in the centre and is approached by corridors from girls' and boys' wings at the sides with an entrance from the front. Commodious verandahs extend in front of wings on both floors. The comfort and convenience of the students have been carefully considered in every detail in connection with this work. The building has been fully finished and equipped.

An activated sewage disposal plant has been installed in the low ground to take the sewage from the buildings in this group. The structural work and drainage was done by Messrs. Taylor and Lackey, and plumbing by Purdy, Mansell, Limited, of Toronto. The plans were prepared by Mr. E. M. Allen, of this Department, under instructions from Mr. Dallyn, Sanitary Engineer for the Provincial Board of Health.

HORTICULTURAL EXPERIMENTAL STATION, VINELAND STATION.—Plans and specifications were prepared for the two double cottages for employees, which have been erected on the grounds. The whole of the work, with the exception of plumbing, heating, electric wiring and tinsmithing, has been carried out satisfactorily by day labour under a capable foreman, the materials being purchased by tender by this Department.

BUILDINGS IN THE DISTRICTS.

COURT HOUSE, SAULT STE. MARIE.—The contract for the completion of this building was awarded to Messrs. Stuart & Sinclair, of Hamilton, in June last, after tenders were called for and theirs being found to be the lowest. Good progress has been made with the work. Roads and walks are now being laid to the front and rear of the building.

Improvements have been made to the heating plant at the gaol in Sault Ste. Marie, which is now working satisfactorily.

COURT HOUSE, PARRY SOUND.—Plans and specifications were made for an extensive addition to the Court House in Parry Sound, to give additional spaces for offices. Tenders were called for, the lowest being accepted and the following contracts awarded: for general trades, Messrs. Stuart & Sinclair, of

Hamilton; heating and plumbing by McTaggarts, of Parry Sound. The electric wiring will be done by our own men. The work will be continued throughout the winter and the building will be completed early in the year.

The buildings throughout the Districts, including Court Houses, Gaols and Registry Offices, have been kept in good repair. Inspection of them is made from time to time by the officials of the Department.

All of which is respectfully submitted.

I have the honour to be, Sir,

Your obedient servant,

F. R. HEAKES,

Architect.

Toronto, October 31st, 1921.

REPORT OF ENGINEER.

HONOURABLE F. C. BIGGS,

Minister of Public Works and Highways.

SIR,—I have the honour to submit the annual report on the business of the Engineer's Branch of the Public Works Department during the fiscal year ending October 31st, 1921.

Exceptionally favourable weather for construction enabled the completion of all works for which funds had been provided. The work, as usual, was carried out by day labour under our regular staff of foremen. The only contracts entered into were for the furnishing of material for construction. The year's construction programme was the most extensive yet carried out by this department. The problem of unemployment is receiving attention throughout the country. An extensive program for winter's work has been arranged and it is the intention to keep the construction crews constantly employed.

On bridge work, the year's activities included the erection of six steel bridges, three on timber abutments and three on concrete. The largest of these was the Falardeau bridge on White River—three spans of 92 feet each—and the Mattawin bridge in Thunder Bay District—one span of 120 feet. Twenty-five concrete bridges were constructed. The largest of these were arch spans of 66 feet—on the Sauble River in Bruce County, and the South River, near Powassan, in Parry Sound.

Eighty-five timber bridges were constructed, varying in length from 20 feet to 400 feet.

On drainage work, the usual programme was followed in the different districts. Favourable weather for work allowed us to complete all the work projected. About \$30,000 was expended on this line of work.

For Public Institutions, plans were prepared for water supply and drainage systems.

DREDGING.—The dredge belonging to the Department continued work in the Huntsville waters, completing the channel at the canal between Peninsula and Fairy Lakes. The narrows at Huntsville were also improved. Buoys were placed to mark dangerous shallows. The work at Huntsville is complete and the dredge machinery is being moved back to Lake Muskoka to resume work at Bracebridge and Port Carling, where improvements are badly needed.

The expenditure from the Maintenance fund was unusually heavy. A great number of public works, bridges and dams, constructed with timber, are rapidly going to decay. The repair and renewal of these works is rapidly mounting in cost. This year about \$80,000 was expended on this work. The heaviest expenditures were on the Huntsville Locks, Dollars Dam and Magnetawan Dam. The latter work is to be renewed in masonry during the coming winter.

The most important expenditures from the Maintenance fund in the different districts were as follows:

RECAPITULATION.

MAINTENANCE EXPENDITURE.

GENERAL.

Tools, repairs to equipment, etc.....	\$2,125 18	
Storehouse, freight, cartage, etc.....	216 96	
Superintendent's Office, expenses.....	276 00

WORKS CONSTRUCTED UNDER SPECIAL APPROPRIATIONS.

RAINY RIVER DISTRICT—BRIDGES.

Burriss Bridge, 10 and 11, Con. 4.—Located over a creek on the 10 and 11 side-road, Con. 4. It is a timber bridge, 45 feet long, supported by 4 bents of piles. Caps and stringers 10" flatted tamarac; floor 3" tamarac plank. Approaches well graded. Cost \$508.80.

First Concession Bridge, 8 and 9, Mather.—Located over the north branch of Sturgeon Creek on the 8 and 9 side line of Mather. A pile trestle, 45 feet long, with 3 spans of 15 feet each; has caps and stringers of 10" flatted tamarac, floor 3" tamarac plank, railing 4" x 4" pine; approaches well graded. Cost \$810.05.

Lash-Devlin Bridge, Sec. 30.—Located over a small creek on the Lash-Devlin boundary west of Sec. 30, Lash. A pile trestle bridge with a clear span of 16 feet. Caps and stringers are 10" flatted tamarac, cover 3" tamarac plank. The approaches are well filled and a good strong guard rail is placed on bridge and fill. Cost \$609.38.

McKelvie Bridge.—Located over a deep ravine on the River Road in the Township of McIrvine. The bridge is a pile trestle structure, 180 feet long. Piles run in length from 20 to 40 feet. Piles and bents are well braced and driven at 16 foot centres. Caps and stringers are of white pine. Caps are 10" x 10" and stringers 8" x 10". Floor is 3" tamarac plank. A strong guard rail is placed on each side of bridge. The fill at the east end is constantly sliding in and displaces the pile bents. The sliding is caused by springs in the bank. To remedy this, a covered drain has been placed between the natural bank and the fill, to cut off the water. The total cost of the bridge was \$2,327.00.

River Road Bridge, Morley.—Located over a ravine at lot 46 on the River Road in the Township of Morley. A pile trestle bridge, 75 feet long, with 5 spans of 15 feet each. Caps are 10" x 10" tamarac; stringers 8" x 10" tamarac; floor 3" tamarac plank. Approaches are well graded and strong guard rails in place. Cost \$1,178.83.

South Pine Bridge, 31 and 32, Morley.—Located over the south branch of the Pine River on the road between Secs. 31 and 32, Morley. It is a pile trestle, 75 feet long, of the same construction as above-described bridge. Cost \$971.50.

Sturgeon Bridge, 8 and 9, Con. 6, Dobie.—Located over the east branch of the Sturgeon River on the road between Lots 8 and 9, Con. 6, Dobie. It is a pile trestle bridge, 40 feet long, with 3 spans of 13' 4" each. Standard construction. Cost \$628.72.

Worthington Bridge, Lots 40 and 41.—Located over a small creek at the line between Lots 40 and 41, on the river road in Worthington. It is a pile

bridge, with a clear span of 16 feet. The approaches are well graded. Cost \$589.76.

Mr. Frank Clement, Road Inspector, was in charge of all the bridge work in Rainy River. By securing timber during the preceding winter, he was able to keep the cost of his work considerably below the estimated cost.

KENORA DISTRICT BRIDGES.

Anderson Road Bridges.—Two small bridges on the Anderson Road in Jaffray and Mellick. The bridges have a clear span of 12 feet. The abutments are of rubble masonry. The stringers and floor are of flatted tamarac. Extensive fills were placed at each end of the bridges. Cost \$785.20.

Mission Bridges, Kenora.—Situated over a creek at the Industrial School at Kenora. It is a timber structure, with a 20-foot span and timber crib abutments. The grading of approaches through marsh was the most expensive part of the work. Total cost \$479.67.

Pelletier Bridge, Mellick.—This was repair work, consisting of renewing 172 feet of flooring, repairing the railing and putting on a few sway braces. Cost \$496.00.

Rice Creek Bridge, Mellick.—Located over Rice Creek at Lot 4, Con. 4, Mellick. A timber bridge on timber crib piers. It has a centre span of 24 feet, with a 12-foot span at each end. Overall length 80 feet. Cost \$570.71.

Beaver Bridge, 2nd Line, Sandford.—Located over Beaver Creek at Lot 6, on the 2nd line of Sandford. A pile trestle bridge, 112 feet long, with pile bents driven at 16-foot centres. Roadway 14 feet clear. Caps, stringers and floor flatted tamarac. D. Hutchison was foreman in charge. \$1,057.10 was the cost.

Wabigoon Bridge, Con. 4, Sandford.—Located over the Wabigoon River at Lot 2 on the 4th line of Sandford. A timber truss bridge, 176 feet long. It has a centre truss span of 60 feet, with a King truss span and a 16-foot trestle span at each end. Pile piers carry the deck. The main two or centre piers are enclosed in timber cribs to resist the ice pressure. Pile timber was secured from Crown Lands in the vicinity and the flooring was procured from the Keewatin Lumber Co. The bridge is painted and well constructed. The approaches are well graded. Total cost \$5,193.66. Mr. Dan Hutchison was foreman in charge.

THUNDER BAY DISTRICT BRIDGES.

Mattawin Bridge, Dawson Road.—Located over the Mattawin River at Sunshine on the Dawson Road. It is a steel bridge on concrete abutments. It has a clear span of 120 feet and has 6 panels of 20 feet each. Roadway is 14 feet clear width. The abutments of concrete are 13 feet in height to the floor level and rest on solid rock. Extensive fills of rock are required at each end. This season the abutments were constructed and the steel erected. The concrete floor will be laid next spring and the approaches completed. The steel

span was supplied by the Hamilton Bridge Works at a cost of \$4,630.00. To date, \$8,000.00 has been expended on the bridge and it will take \$1,000.00 to complete the work. Mr. S. W. Butt was foreman in charge.

Silver Mountain Road Bridge.—Located over a creek at Lot 7, Con. 5, Gillies. It is a timber bridge with a clear span of 20 feet. Cost \$470.67.

Sixth Concession Bridge, Beaver Creek, Gillies.—Located over Beaver Creek, on the Hymers Road, between Lots 6 and 7, Gillies. A timber bridge with a clear span of 16 feet. Cost \$431.53.

Slate River Bridges, 2nd Line, Paipooonge.—The Slate River makes an oxbow bend at Lots 9 and 10, making a double crossing of the 2nd line of Paipooonge. The old timber bridges were completely played out. Two new timber bridges were constructed. The bridge at Lot 10 has a centre span of 50 feet, with approach spans of 18 feet at each end, giving an overall length of 86 feet. Roadway is 14 feet. Double pile piers carry the truss. Single pile piers are driven at each end. The truss members, caps and corbels are 10" x 12" pine. Piles are of tamarac, well braced. Stringers are 10" flatted tamarac and floor is of 3" pine plank. Guard rail in place.

The bridge at Lot 9 follows the same construction as the bridge at Lot 10. It has a centre span of 60 feet, with approach spans of 20 feet 6 inches at each end, giving an overall length of 101 feet. The double pile piers that carry the truss span are 5 feet wide; are provided with cut-waters. The cut-water and face of pier are sheeted with 3" plank. The bridges are well painted with everjet paint. The approaches are well graded and gravelled. \$2,811.59 was expended on the two bridges.

Sunshine Creek Bridge, 2nd Line.—Located over Sunshine Creek, on the 2nd Line. It is a timber bridge, 36 feet long. \$404.19 was expended on the bridge.

SAULT STE. MARIE DISTRICT BRIDGES.

Gore Bridge, Sections 21 and 22, Korah.—Located over a creek on the line between Sections 21 and 22, Korah. It is a concrete bridge, with a clear span of 15 feet. The abutments are 4 feet 6 inches wide at the base and 9 feet in height to the floor level. The 6 inch concrete floor slab is supported by 4 main beams, 12" wide and 15" deep. Each beam is reinforced with four 1" square twisted steel bars. The floor is reinforced with 5 8" square bars. The railing is of moulded concrete posts, bedded in the floor and supported at the top by a reinforced concrete rail. The top rail is supported by 3 main posts 12" x 12", reinforced with 5 8" bars. The approaches are well graded. Total cost \$1,005.95.

Root Bridge, Sections 8 and 9, Tarentorus.—Located over the north branch of the Root River on the road between Sections 8 and 9 in Tarentorus. It is a concrete beam bridge with a clear span of 30 feet. The abutments rest on a secure gravel bottom and are 8 feet in height to the floor level. The 6" concrete floor slab is carried by 4 main beams 12" wide and 30" deep. Each beam is reinforced with 5 bars, 1" square twisted steel. The floor is reinforced with

5/8" square bars. The railing is standard moulded concrete posts. Very heavy fills were placed at each end of the bridge to build up a proper roadway. Total cost of bridge \$1,840.72.

Searchmont Bridge, Goulais River.—Located over the Goulais River, at Searchmont, in the Township of Hodgins. This bridge consists of two steel spans of 80 feet each on timber pile piers. A 16-foot trestle span is placed at each end of the steel, giving an overall length of 202 feet. The centre pier consists of a double line of piles. 21 piles are placed in the pier. The piles are enclosed in a heavy timber crib built up to high-water level, and filled with stone. The piers are built with a cut-water faced with steel plate. The shore piers consist of double lines of piles. The piers are 6 feet wide and are finished with wings on the up-stream end. The face of the pier and wings is sheeted with 3" plank. The fill at each end falls to a natural slope around the shore bent of piles.

The steel was supplied by the Dominion Bridge Co., at a contract price of \$6,125.00. All work, including erection and painting of steel, was under the direction of S. W. Butt, Public Works Foreman. The total cost of the bridge was \$12,887.70.

ALGOMA DISTRICT—BRIDGES.

Bridgeland Road Bridges—Located over the Little Thessalon River, on the Bridgeland road, in the Township of Bridgeland. Two timber bridges are built on the same plan and are about 2 miles apart, the first being about 6½ miles north of Little Rapids. The bridges are 72 feet long over all. The centre span is 32 feet clear, supported on cedar cribs, well cross-tied and drift-bolted, and filled with stone. A 3" fine plank floor carries the traffic. It is supported by a king truss of 10" x 12" timbers. The approaches are well graded. Cost \$1,507.00.

Cummings Creek Bridge, Gould.—Located on a creek at Lot 5 on the 2nd line of Gould. It is a timber bridge, 50 feet in length. Expenditures \$285.00.

Dunn's Rapids Bridge, Galbraith.—Located over the east branch of the Little Thessalon River at Lot 4, Con. 3, Galbraith. It is a timber bridge, 68 feet in length, 14 foot roadway. It has a centre span 28 feet clear, supported by timber cribs, well drift-bolted and filled with stone. Stringers are 10" x 12" pine. 3" hemlock floor. Approaches are well graded and there is a strong guard rail in place. Cost \$528.00.

Galbraith Bridge, Con. 2.—Located in McPhee's Valley, on the Ophir-Dunn Valley Road, Con. 2, Galbraith. It is a timber bridge, 14 feet long, built of cedar. The floor is carried on pile bents. The approaches are built up of stones and earth. A strong guard-rail is placed on each side of bridge and fill. Cost \$579.37. The fill is the expensive part of the work.

McLeod's Bridge, Con. 4, Aberdeen.—Located over a creek at Lot 12, Con. 4, Aberdeen. The old bridge was 32 feet long. The new timber bridge is 20 feet long, built entirely of cedar. Pile bents carry the floor. A new fill of stone

was placed at each end of bridge and top-dressed with gravel. A strong guard rail is placed at each side of bridge and fill. Cost \$431.56.

Shakespeare Bridge, Lot 7, Con. 1.—Located in a ravine at Lot 7, Con. 1, Shakespeare. It is a cedar box culvert, 44 feet long, 4 feet wide and 3½ feet high, inside measure. The ravine is filled above the culvert. The fill is 12 feet high and 20 feet wide on top. 800 yards of earth and stone were placed in the fill. The fill is top-dressed with 18 inches of gravel. Cost \$400.00. Jas. Barkley, road inspector, was in charge of the construction of all these bridges.

Station Bridge, Bar River.—Located over Bar River at Bar River Station, on the road between Sections 3 and 4, Laird. It is a concrete pile trestle, 54 feet 8 inches in length. It has a centre span, 20 feet long with end spans of 15 feet each. The floor system is carried on 4 bents of concrete piles. The piles in the two centre bents are 30 feet long and in the two shore bents 25 feet long. Each pile is reinforced with 4¾" bars, with spiral winding of No. 7 wire. Concrete caps are placed over the heads of piles. Four main beams carry 6" floor slab, reinforced with 5 8" bars. On the centre span, the beams are 12" wide and 15" deep and on the end spans, the beams are 12" wide and 12" deep. Each beam is reinforced with 4 steel bars, 1" square, with stirrups of No. 7 wire. The railing is of moulded concrete posts. At each end of the bridge a fill of stone is placed. The fill is allowed to fall to a natural slope. An excavation is made for the toe of the slope, to bring the stone below the bed of the river and prevent the displacement of the stone through scour. Cost \$2,040.51. S. W. Butt was foreman in charge.

Sucor Creek Bridge, Johnston.—Located over Sucor Creek, on the Desbarats Road, the west town line of Johnston. It is a concrete beam structure, with a clear span of 15 feet. The abutments are of concrete and are 9 feet high to the floor level. A 6" floor slab is carried on 4 beams. The beams are 12" wide, 15" deep, reinforced with four 1" square twisted steel bars. The railing is the standard, with moulded concrete posts. The approaches were well graded. Cost complete, \$1,460.00. Walter Robinson was foreman in charge.

MANITOULIN DISTRICT—BRIDGES.

Assiginack Bridge.—Concrete abutments; seven lines of cedar stringers. 3" cedar plank floor, clear width 12 feet; strong guard rail in place and approaches well graded and gravelled. Total cost, \$298.92.

Barrie Island Bridge.—Located over the narrow channel between Barrie Island and the mainland at Con. 7, Gordon. The bridge has a clear width of 8 feet. Rubble masonry abutments and a 12" floor slab, reinforced with 5 8" square bars. The balance of the channel, which is shallow, is filled with rock and top-dressed with gravel. Total cost, \$1,136.46.

Beaudoin Creek Bridges, Baldwin.—No. 1, located over Beaudoin Creek, at Lot 6, Con. 2, Baldwin. It is a timber bridge with a clear span of 20 feet. All cedar timber. Abutments and cribs are filled with stone; stringers and floor

are of flatted cedar and approaches are well graded. A good strong guard rail is placed at each side of the bridge and fill.

No. 2 bridge is located over the same creek at Lot 7, Con. 6, Baldwin. It is a timber bridge with a clear span of 16 feet of the same construction as No. 1. Cost of both bridges, \$695.92.

Black Creek Bridge.—Located over Black Creek at Lot 8, on the line between Cons. 3 and 4, Baldwin. A timber bridge with a clear span of 16 feet, cedar crib abutments, stone filled. Stringers and floor are of flatted cedar. Cost \$291.20.

Gore Bay Main Street Bridge.—Located over a creek on the main street in the town of Gore Bay. It is a concrete bridge, with a length of 40 feet and a clear width of 10 feet. The walls are 10 feet in height to the floor level and are 3 feet 6 inches wide at the base. The floor is a 12" slab reinforced with 5/8" square twisted bars. The creek valley is well graded to the street level. Cost \$1,500.00. Walter Robinson was foreman in charge.

Ice Lake Bridge, Allan.—Located over Ice Lake Creek at Lot 18, Con. 9, Allan. The bridge has a clear span of 18 feet. Rubble masonry abutments set in cement mortar. Stringers and floor are of flatted cedar. A king truss supports the floor. Approaches are well graded and gravelled. Cost \$554.40.

Indian Point Bridge.—The old pivot pier at the Indian Point swing bridge has become badly battered with ice and logs at the up-stream face. The upper corner adjacent to the channel was also badly battered by boats and scows. To guard against further damage to the pier, a new guard pier, 16 x 24 feet, was built just above the pivot pier and joined to it. This new pier is strongly built of heavy timber, well cross-tied and drift-bolted. It is filled with stone to high water level. The top timbers on the pivot pier were removed and replaced with new timbers, 12" x 12" square. A new base of concrete was placed beneath the timber under the pivot. This concrete base, which is 2 feet thick, rests on the stone filling of the pier. The swing span was properly lined up and balanced and is now in good working condition. Walter Robinson, Foreman Public Works, was in charge of the work. Cost \$2,730.00.

Turtle Creek Bridge, Sheguiandah.—Located on Turtle Creek on the road between Lots 20 and 21, Con. 4, Sheguiandah. It is a concrete beam bridge with a clear span of 25 feet. The bottom is rock and the abutments are 6 feet in height to the floor level. The 6" floor slab, reinforced with 5/8" bars, is carried on four concrete beams. These beams are 24" deep and 12" wide and are reinforced with five 1" square twisted bars. The railing is of standard moulded concrete posts. A long fill is placed at each end of the bridge in the creek valley. A strong guard rail is placed at each side of the fill. Walter Robinson was foreman in charge. Total cost, \$1,956.00.

Willett Creek Bridge, Gordon.—Located on Willett Creek, at Lot 15 on the 7th Con. Road of Gordon. It is a concrete bridge with a clear span of 11 feet. The bottom is rock and the abutments are 9 feet in height to floor level. The floor is a 12" slab, reinforced with 5/8" bars at 8" centres. The railing is of moulded concrete posts. The approaches are well graded. Walter Robinson was foreman in charge. Cost \$794.00.

SUDBURY DISTRICT BRIDGES.

Neelon Bridge.—Located over Whitefish Creek at Lot 3, Con. 1, Neelon. The bridge has a span of 20 feet, rubble masonry abutments 8 feet high; a timber deck of flatted cedar, floor and stringers. A heavy fill is placed at each end of the bridge. The fill is faced with stone. Cost \$613.36.

Hagar Creek Bridge, Lot 2, Con. 4.—Located over Hagar Creek at Lot 2, Con. 4, Hagar. It is a timber bridge with a clear span of 16 feet, and timber crib abutments, 14 x 17 feet and 5 feet high, stone-filled. Stringers and floor 10" flatted cedar. Approaches well filled. Guard rail on each side of bridge and fill. Cost \$215.25.

Sixth Concession Bridge, Lot 9, Hagar.—Located over a creek, an arm of the north branch of the Veuve River, at Lot 9 on the 5th and 6th Concession line. It is a timber bridge 46 feet long, with a clear span of 30 feet on timber crib abutments, stone filled. The floor span is supported by a king truss. The stringers are of 10" flatted cedar. Floor 5" flatted jack-pine. The old bridge was 80 feet long. The approaches are well filled with earth and rock. A guard rail is placed on each side of bridge and fill. Cost \$497.60.

Whitson Creek Bridge, 5th Line, Rayside.—Located over Whitson Creek on the 5th Con. line of Rayside. It is a pile trestle bridge, 75 feet long, with pile bents driven at 15 foot centres. The caps and stringers are of 10" flatted cedar. Floor 3" pine plank. Strong guard rail on each side of bridge. A. L. McDonald, Foreman Public Works, looked after the construction of these bridges. Approaches properly graded. Cost \$808.00

STURGEON FALLS DISTRICT BRIDGE.

Casimir-Jennings Bridges.—No. 1.—Located over a creek at Lot 6, on the Appleby-Jennings townline. A timber bridge with a clear span of 12 feet. The abutments are cedar pile piers. The piles were set in holes 6 feet deep bored with a 10" auger. Caps and stringers 10" flatted cedar. Floor flatted tamarac. Approaches well graded. No. 2.—Located over a creek at Lot 7, on the same townline. This bridge is of the same size and construction as the bridge at Lot 6. No. 3.—Locally known as Cherrifles bridge, is located over a creek at Lot 10 on the Appleby-Jennings townline. It has a clear span of 14 feet and follows the same construction as the above described bridge. No. 4.—Located over a creek at Lot 7, Con. 2, Casimir. It has a clear span of 12 feet and follows the same construction as the bridges described. No. 5.—Located at Lot 9, Con. 5, Casimir. It has a clear span of 12 feet on the same line of construction as the others described. No. 6.—Two bridges over a creek on the road between Lots 6 and 7 in Con. 1, Appleby. The bridges have a clear span of 15 feet and constructed on the same plan as bridge No. 1, described above.

Janes Bridge, Sturgeon River.—Located at the elbow in the Sturgeon River in the township of Janes. The Sturgeon Valley Road follows the north side

of the river to the elbow. Here a crossing is necessary for the further extension of the road. The new bridge consists of a steel span 70 feet long on timber pile abutments. The balance of the bridge is a pile trestle of 7 spans of 16 feet each, giving a total length of 190 feet. The pile piers supporting the steel consist of double rows of piles, 4 feet apart, 21 piles in each pier. The main pier in the stream is enclosed in a strong timber crib, filled with stone to high water level. The main shore pier is sheeted with 3" plank. Five piles are driven in each bent in the trestle and the piles are well braced. The floor is of 3" pine plank. A strong guard rail is placed at each side of the bridge.

The steel span, including floor joist was supplied by the Hamilton Bridge Works, at a contract price of \$1,698.00. All work in connection with the bridge, including the erection of the steel was done under the direction of A. L. McDonald, Foreman Public Works. Total cost, \$6,282.00.

Southern Bridge, Sturgeon Falls.—This bridge was erected last year, but the work was not fully completed. The work was continued this year and the bridge was opened to traffic in July.

TEMISKAMING BRIDGES.

Barlow Bridge, Con. 6, Armstrong.—Located over a creek at Lot 2 on the road between Cons. 5 and 6 of Armstrong. The bridge is a pile trestle. The pile bents were placed and capped, new flatted stringers were put on (6 lines) and a new floor of 3" tamarac plank put on. The hills on each side were cut down and 1400 yards of earth were placed in the fill. A strong guard rail 130 feet long was placed at each side of bridge and fill. \$419.00 was expended on the work.

Falardeau Bridge, White River.—Located over White River at Lot 4 on the road between Con. 5 and 6, Casey. The bridge has an over-all length of 340 feet. It comprises 3 steel spans of 90 feet each centre to centre bearings. At the west end the approach is a pile trestle of 48 feet of 3 spans. At the east end, the approach is a single span of 16 feet.

The two centre piers are built of piles enclosed in stone-filled timber cribs. The cribs are 12 feet wide and 32 feet long with an angled cutwater up stream. An ice-breaker, consisting of a single row of piles extends up stream from the pier. The piles are capped with a heavy timber. The timber is sheeted with a 12 by 12 steel angle.

A 16 foot frame bent is built up from the head of the piles in the pier. This frame bent carries the steel. The outer piers are of heavy piles, which extend full height to the bridge seat. The steel spans are provided with steel floor joist. The flooring throughout consists of 3" pine and tamarac plank. The steel spans are furnished with a pipe railing and the approaches are finished with a wooden guard rail.

The steel was furnished by the Hamilton Bridge Works at a contract price of \$9,588.00.

All the work in connection with the bridge, including erection and painting of the steel was done under the direction of C. R. Dolmage, Foreman Public Works. The total cost of the bridge was \$22,000.00.

Harley-Casey Townline Bridge.—Located in a ravine in the 2nd. Con. on the townline between Harley and Casey. It is a concrete box culvert, 40 feet long, with wing walls 6 feet long at each corner. The culvert is 6 feet wide and 4' 6" high inside dimensions. The side walls are carried down 3 feet below the bottom of the stream and are 3' 3" wide at the base, and 18" wide at the top. The top is a concrete slab, 12" thick, reinforced with $\frac{5}{8}$ " square twisted bars at 8" centres. The fill is 9 feet above the top of the culvert, and is top-dressed with gravel. A strong guard rail is placed at each side of the fill. J. W. Davis was foreman in charge. Cost \$3,345.00.

Hudson Creek Bridge, Con. 2, Kerns.—A timber bridge located over Hudson Creek at Lot 6, Con. 2, Kerns. The bridge has an overall length of 92 feet. The centre span is 48 feet clear. Piers are 6 feet wide with a 16 foot approach span at each end. Truss timbers, needle beams, caps and corbels are 10 x 12 pine. Flooring is 3" pine. Stringers 6 rows, 5 x 12 pine. Railing and posts, 4 x 4. Hub rail, 1 $\frac{1}{2}$ x 8. The approaches are well graded. The truss timbers are dressed and well painted with Ever Jet paint. D. H. McIntosh was foreman in charge. Cost, \$1,178.00.

Judge Bridge.—This work consisted of replacing the flooring of the bridge, 370 feet in length, with 3" tamarac plank. New wheel guards were placed. The approach spans were levelled up. Broken sheeting of piers renewed. The approaches were regraded in proper manner. The west approach was raised 18" for a distance of 100 feet. W. E. Kerr was in charge of the work. Cost, \$757.85.

North Road Culvert.—Located in a ravine on the road leading north from New Liskeard in the 4th Concession of Dymond. The culvert takes the place of a long timber trestle. It is 40 feet long, with 6 foot wing walls at each corner. It is 4' 6" high and 6 feet wide inside dimensions. The side walls are 3' 3" wide at the base and extend down 3' below the bottom of the ravine. The top slab, 12" thick, is reinforced with $\frac{5}{8}$ bars. The fill is 9 feet above the top of the culvert, being about 14 feet above the bottom of the ravine. Strong guard rails are placed at each side of fill. J. W. Davis was foreman in charge. Cost of work complete, \$2,403.55.

Little Otter Bridge.—Located over the Little Otter Creek, at Lot 8, on the Ingram-Hilliard townline. It is a timber bridge, 68 feet long, with a centre span of 36 feet. The east pier is a pile crib and the west abutment is a timber crib, well bedded and filled with stone. The timbers are well drift-bolted. Approaches are well graded. The work was done under the direction of W. E. Kerr. Cost, \$543.91.

North and Pine Street Bridges, New Liskeard. North Street Culvert. Located on a creek on the north road in the town of New Liskeard. This creek leads in from the country to the north and east of the town. It has been a difficult matter to maintain bridges, owing to the rapid erosion of the clay banks. To prevent further erosion, it was decided to put in a corrugated pipe culvert, with concrete collar or retaining wall, at each end. The pipe culvert is 40 feet long and 3 feet in diameter, and discharges into a wooden

apron to guard against erosion. The retaining wall is 34 feet long at the up-stream end. The roadway fill extends about 12 feet above the pipe.

Pine Street Culvert.—This culvert is located over the same creek as the north road culvert. It comprises a corrugated Pedlar pipe, 42 inches in diameter and 50 feet long. A concrete collar with wing walls is placed at the up-stream end. At the lower end, an abutment of square timber well drift-bolted, holds the fill. The pipe discharges on a timber apron, well bedded and bolted. The roadway fill extends about 12 feet above the top of the culvert. The cost of the two culverts which were built by the town of New Liskeard was \$3,100.00. The department contributed \$1,400.00 to the cost of the work. Sutcliffe and Neelands were engineers in charge.

NIPISSING DISTRICT BRIDGES.

Antoine Creek Bridge, Con. 6, Mattawan.—Located over Antoine Creek on Con. 6, Mattawan. It is a timber bridge, with a clear span of 30 feet. The piers are timber cribs 11x 16 and about 10 feet in height and filled with stone. The approaches are built up of stone. Timber wings are built up on the up-stream end, 50 feet long. These wings are timber cribs, 8 feet wide and 6 feet high. Strong guard rails are placed at each side of fill. Cost, \$972.22.

Astorville Bridge.—Located over an arm of Lake Nosbonsing at the village of Astorville in the township of Ferris. The old timber bridge at this place is completely worn out. It is about 500 feet long. It was decided to abandon the wooden structure and build a causeway of earth and stone across the bay, leaving a small opening for a waterway. This causeway was commenced this season and 252 feet in length was constructed. A roadway 16 feet in width has been provided. The fill from 3 to 6 feet in height, is built above high-water level. The remaining timber structure was repaired with timber from the section of bridge removed. \$1,998.00 was expended on the work.

Barbotte Creek Bridge, Con. 6, Calvin.—A timber bridge repaired. \$132.00 was expended on the work.

Barrett Creek Bridge, Con. 24, Cameron.—A timber deck bridge, located over Barrett Creek on the 24th Concession of Cameron. The bridge has a clear span of 20 feet. The abutments are of stone and concrete 6 feet in height. The deck is cedar timber, heavy fills are placed at each end of the bridge. \$500.00 was expended on the work.

Chippewa Creek Bridge, Con. 3, Widdifield.—A timber deck bridge on abutments of stone and concrete. The abutments are 9 feet in height, span of 15 feet clear. Deck is of cedar. The fill at the north end of the bridge is 240 feet in length and at the south end the fill is 400 feet long. A strong guard rail is placed at each side of bridge and fill. \$499.00 was expended on the work.

Dickson Bay Bridge.—Located over a creek at Dickson Bay in the township of Mattawan. A timber bridge with a clear span of 16 feet. Timber crib abutments, stone-filled. On the south end the approach 55 feet long, is a timber crib filled with gravel. The north approach is an earth fill. A strong

guard rail is placed at each side of bridge and fill. \$600.00 was expended on the work.

Fifth Con. Bridge, Barrett Creek, Cameron.—Located over Barrett Creek on the 25th Con. of Cameron. A timber deck bridge on stone and concrete abutments, 7 feet in height. The deck is all cedar. The fill at the east end is 62 feet long and at the west end, 34 feet long. A strong guard rail at each side of bridge and fill. \$808.00 was expended on the work.

Laplante Bridge, Con. 8, Bonfield.—Located over a creek on the 30th side line in the 8th Con. of Bonfield. A timber bridge with a clear span of 12 feet. The abutments are timber cribs, stone filled. The approaches at each end are 40 feet long and are walled with timber and filled with earth and stone. A strong guard rail is placed at each side of bridge and fill. Cost of work \$599.14.

Le Clair Bridge, Con. 10, Ferris.—Located over a creek on the road between Cons. 10 and 11, Ferris. There are two bridges close together—one has a span of 16 feet and the other 8 feet. The abutments are of stone and concrete. The decks are of cedar timber. The fills at each end of both bridges are heavy. \$499.74 was expended on the work.

North Creek Bridge, Con. 4, Widdifield.—Located over North Creek, Lot 7, Concession 4, Widdifield, near Widdifield Station. It is a concrete beam bridge, with a clear span of 20 feet. The abutments are of solid concrete and are 9' 6" in height to the floor level. They are supported on pile foundations. The 6" floor slab is reinforced with $\frac{5}{8}$ " bars and is carried on 4 main beams. These beams are 12 inches wide and 18 inches deep, reinforced with 4 steel bars 1" square. The railing is of moulded concrete posts. A heavy fill is placed at each end of bridge. J. W. Davis was foreman in charge. Cost, \$2,164.00.

Moreau Bridge, 15 Sideline, Ferris.—Located over a creek on the 15 Concession of Ferris. The bridge has a clear span of 14 feet. Stone and concrete abutments. Cedar deck. The approaches, 150 feet on north end and 65 feet on south end, are filled with earth and stone. Cost, \$497.91.

Socker Creek Bridge.—Located over Socker Creek on the Ferris-Chisholm townline. The bridge has a clear span of 12 feet stone and concrete abutments, 9 feet high. Cedar deck. The approaches, 300 feet on the east end, and 600 feet on the west end, are built up of earth and stone. The creek bed was cleared at this point, and the stone removed was used in the approach fills. Total cost, \$495.10.

PARRY SOUND DISTRICT BRIDGES.

Commanda Bridge, Nipissing Road.—Located over Commanda Creek on the Nipissing Road, near the west boundary of Gurd. It is a concrete beam bridge, with a clear span of 32 feet. The concrete abutments are about 8 feet in height. The 6" floor slab reinforced with $\frac{5}{8}$ " bars, is carried on four main concrete beams. These beams are 30" deep and 14" wide, reinforced with 6" steel bars, 1" square. The railing is of moulded concrete posts. Approaches are well graded. T. J. Paget was foreman in charge. Cost, \$2,380.00.

Dufferin Creek Bridge, Spence.—Located over Dufferin Creek on the Nipissing road in the township of Spence. A concrete beam bridge with a clear span of 17 feet. Concrete abutments 9 feet high rest on pile foundations. The 6" floor slab reinforced with $5\frac{1}{8}$ " bars, is carried on four main concrete beams, 12" wide and 15" deep. The beams are reinforced with four one-inch square twisted steel bars. The railing is of moulded concrete posts. Approaches are well graded. John Orr, Road Inspector, supervised the construction. Cost, \$2,177.00.

McCartney Bridge, Armour.—Located over the Magnetawan River at Lot 7, on the road between Cons. 10 and 11 of Armour. It is a concrete beam bridge with a clear span of 30 feet. The abutments of mass concrete are 10 feet in height, resting on solid rock. The floor slab is 6" thick reinforced with $5\frac{1}{8}$ " bars and is carried on four main concrete beams. The beams are 12" wide and 30" deep, reinforced with five one-inch square twisted steel bars. The railing is of moulded concrete posts. Approaches are well graded. T. J. Paget was foreman in charge. Total cost, \$2,192.00. The township of Armour contributed \$600.00 toward the cost of the bridge, leaving the cost to the department of \$1,592.00.

Rainy Lake Bridge.—Located over a creek at Rainy Lake, Lot 14, Con. 1, Shawanaga. It is a timber bridge, with a clear span of 16 feet, cedar crib abutments, stone filled. Stringers are 10" pine and cedar flatted. Floor is of 6" flatted cedar. Approaches are built up of stone and top-dressed with gravel. Cost of bridge, \$203.25.

Shawanaga Bridge, Con. 2, Burpee.—Located over Shawanaga Creek at Lot 10. A timber bridge with a clear span of 15 feet. Cedar crib abutments, stone filled. Deck flatted cedar. Approaches stone filled. Cost of bridge, \$433.75.

Third Line Bridge, South River.—A steel bridge on concrete abutments, located over South River at Lot 28 on the road between Cons. 2 and 3 in Himsworth. The steel span is 70 feet long, "C to C" of bearings, with roadway 14 feet in clear width. The abutments are of mass concrete, 16 feet in height to floor level, 6 feet wide at the base. The abutments are carried on heavy pile foundations, 35 piles being placed under each. A 6" concrete floor slab is placed on the bridge. The grading of approaches was left for the road gang. The steel span was supplied by the Hamilton Bridge Co. at a contract price of \$2,325.00. P. R. Switzer was foreman in charge. Total cost, \$4,486.00.

Thirteenth Line Bridge, South River.—Located over South River at Lot 22 on the road between Cons. 12 and 13 of Himsworth about three miles west of Powassan. This is a concrete arch with a clear span of 66 feet at the spring of the arch ribs. The arch has a clear height of 12 feet and the deck is carried on two arched ribs. The ribs are 18" thick, heavily reinforced with 1" bars. Parapet walls extend 3' 6" above the floor level. The rib and wall have a depth of 6' at the centre of the arch. The top railing of wall is 12" x 12" in size, reinforced with four $\frac{3}{4}$ " square twisted bars. Stirrups of $\frac{5}{8}$ " bars are placed at 24" centres, extending from the bars in the bottom of arch rib to bars in the top rail.

The floor system consists of two floor beams between the arch ribs, at 23 feet centres. These floor beams are 15" wide and 24" deep, reinforced with 1" bars. Two longitudinal beams 12" wide and 20" deep, tied into the abutments and floor beams carry a 6" floor slab, reinforced with $\frac{5}{8}$ " bars. The abutments and wing walls are of mass concrete. The wings extend in line with arch ribs to the rock wall of the valley.

The approaches were levelled off by blasting and the rock used in filling in the ravine. C. R. Dolmage was foreman in charge. The total cost of the bridge was \$7,675.00.

Trout Creek Bridge.—Located over Trout Creek on the Muskoka Road in the village of Trout Creek. It is a concrete trestle with an overall length of 72 feet and a clear width of 16 feet. It has a centre span of 27 feet with an approach span of 20 feet at each end. Four bents of concrete piles carry the floor. Owing to the height of the floor above the bottom of the creek, seven piles are used in each of the two centre bents. Four piles are used in the shore bents. The piles in the centre bents are 30 feet long, 8" square at point and 14" square at the head. Each pile is reinforced with four $\frac{3}{4}$ " bars, which are wound with No. 7 wire. The reinforcing projects 12" beyond head of pile. A concrete cap is built up from the head of piles. Four main floor beams carry the 6" floor slab. On the centre span the floor beams are 12" wide and 24" deep, reinforced with six 1" square twisted bars. For the 20 foot spans the beams are 12" wide and 18" deep, reinforced with four 1" bars. The railing is of moulded concrete posts with top rail supported on main posts 12" square, placed at 9 foot centres. A stone fill is placed at each end of bridge and is allowed to fall to a natural slope around the piles. The approaches are well graded. P. R. Switzer was foreman in charge. Total cost, \$5,439.74.

White Oak Bridge, Humphrey.—Located over White Oak Creek at Lot 77, Con. B., Parry Sound Road, township of Humphrey. It is a concrete beam bridge with a clear span of 27 feet on concrete abutments, 11' 6" in height to the floor level. The abutments rest on pile foundations. A 6" floor slab reinforced with $\frac{5}{8}$ " bars is carried on four main girder beams 14" wide and 30" deep. Each beam is reinforced with seven 1" square twisted bars. The railing is of moulded concrete posts. A heavy fill was placed at each end of the bridge. T. J. Paget was foreman in charge. Heavy transportation charges and an isolated location made the cost unusually heavy. Total cost, \$3,586.00.

MUSKOKA DISTRICT BRIDGES.

Boyne Creek Bridge, Dwight.—Located over Boyne Creek on the north shore of the Lake of Bays in the township of Franklin, a short distance west of Dwight. This is a timber bridge on timber abutments. The deck of the bridge was raised 12" to allow the passage of logs. An entirely new structure was built. The approaches were built up of stone. The roadway for about 400 feet west of the bridge had been cut away by the action of the water in the lake. A solid wall of stone 4 feet wide was placed here and the road widened to standard width. \$944.00 was expended on the work.

Echo Creek Bridge, Baysville-Dorset Road.—Located over Echo Creek on the Baysville-Dorset Road at Lot 1 in the township of McLean. It is a

concrete bridge with a clear span of 12 feet. The abutments are concrete, 9 feet in height to floor level. The deck is a 12" slab, reinforced with $\frac{5}{8}$ " bars; railing of concrete posts. The approaches are well graded. Cost, \$1,161.00.

East Creek Bridge, Oakley.—Located over East Creek at Lot 10, Con. 5, Oakley. A timber bridge with a clear span of 14 feet. Built entirely of cedar. Approaches filled with stone and top dressed with gravel. Cost, \$231.13.

Fox Lake Bridge.—Located over Buck River at Lot 27, Con. 9, Stisted. A timber bridge 79 feet long over all, the bridge has a centre span of 40 feet, with a queen truss support. Approach spans of 12 feet are built at each end and the centre piers are 7 feet wide. They are built 10 feet high. The decayed timbers on the top of piers were removed and replaced with new timbers. An entirely new deck was put on. Strong guard rails were placed on each side of bridge and fill. The approaches were properly graded. Cost, \$866.40.

Fifteenth Side Line Bridge, Stisted.—Located over Black Creek at Lot 8, on the 15th side line of Stisted. A timber bridge with a clear span of 15 feet. Cedar crib abutments, filled with stone. Stringers five lines of 10" flatted tamarac flooring 6" flatted cedar. A strong guard rail is placed on each side of bridge and fill. Approaches are properly graded. Cost, \$186.00.

Gordon's Bridge, Trout Creek, Ridout.—Located over Trout Creek on the Baysville-Dorset Road in the township of Ridout. It is a concrete bridge with a clear span of 12 feet built after the same plan as the Echo Creek bridge, before described. Cost, \$926.66.

Glass Mill Bridge, Monck.—Located over a creek at Lot 27, Con. 12, Monck. A concrete beam bridge, with a clear span of 20 feet. The concrete abutments are 9' 6" in height to the floor level. A 6" floor slab is carried on 4 main beams 12" wide and 18" deep, each reinforced with 4 bars of 1" square twisted steel. The railing is of concrete posts. Approaches properly graded. The concrete abutments rest on pile foundations. Total cost, \$1,792.00.

Ryde-Draper Bridge.—Located over a creek at Lot 14, on the townline between Ryde and Draper. It is a wooden bridge, with a clear span of 15'. Cedar crib abutments carry a deck of flatted stringers and flatted flooring. The approaches are properly graded. A strong guard rail is placed on each side of bridge and fill. Cost, \$205.50.

Skeleton River Bridge, Parry Sound Road, Watt.—Located over Skeleton River on the Parry Sound Road, Lot 22, Con. 13, Watt. In order to straighten the road, the bridge was moved east about $\frac{1}{4}$ of a mile. The new site requires abutments about 16' high. The bottom is soft, necessitating pile foundations for the abutments. The bridge is a concrete structure with a clear span of 25 feet. The 6-inch floor slab is supported by 4 main concrete beams. The beams are 12" wide and 24" deep, reinforced with 4 bars 1" square twisted steel. Railing is of standard moulded concrete posts. The grading of approaches was done by the Roads Department. The cost of the bridge was \$2,478.75

All the bridges of the Muskoka District were constructed under the direction of Wm. Lowe, Foreman Public Works.

SIMCOE COUNTY BRIDGES.

Hog Creek Bridge, 5th Con., Tay.—Located over Hog Creek at Lot 7, on the road in front of the 5th Con. of Tay. It is a concrete beam bridge with concrete pile abutments. It has a clear span of 20 feet. Each end of the bridge is supported on 4 concrete piles 18 feet long. The piles are 8" square at the lower end and 14" square at the head. Each is reinforced with four $\frac{3}{4}$ " square twisted bars, with spiral winding of No. 7 wire. The reinforcing bars project 12" above the head of the pile. Reinforced caps are built up from the piles to the floor. Four main floor beams carry a 6" floor slab. The beams are built into the caps directly over the piles. The beams are 12" wide and 18" deep, each reinforced with four 1" square twisted bars. The railing is our standard moulded concrete posts. At each end an excavation was made below the bottom of the stream. A fill of stone was placed at each end. The fill falls to a natural slope around the piles making a durable and secure abutment. Cost of bridge, \$1,650.00.

Marl Creek Bridge, Vespra.—Located over Marl Creek at Lot 2 on the road in front of Con. 11 of Vespra. A standard concrete beam bridge with a clear span of 25 feet concrete abutments 13 feet in height to floor level a built on a skew to line in with the stream. Pile foundations support the abutments. A heavy fill is placed at each end. Cost, \$1,921.61.

North River Bridge, 3rd Line, Matchedash.—Located over North River on the road in front of Con. 3 at Lot 5, Matchedash. It is a concrete trestle with an overall length of 76 feet. The centre span is 30 feet clear and the end spans are 20 feet each. The deck is supported by 4 bents of piles. The two middle bents have 5 piles in each and the end bents 4 piles in each. The extra pile in the centre bent is merely a guard to protect the supporting pile on the upstream and from damage from ice and logs. The deck is of standard beams, floor and post railing all heavily reinforced; stone fills, properly bedded below the bottom of the stream are placed at each end to hold the approach fills. Total cost, \$3,748.00. A steel bridge with a similar water way could not be constructed at this place for less than \$6,000.00.

Silver Creek Bridge, Orillia Townline.—Located over Silver Creek on the townline between the township of North and South Orillia. It is a standard concrete beam bridge with a clear span of 17 feet. The abutments are 12 feet in height to the floor level. The approaches are well graded; the concrete work was done during the winter. Cost of work, \$1,966.00.

Third Line Bridge, Matchedash.—Located over a creek at Lot 6 on the 3rd Con. road of Matchedash. A concrete beam bridge with a clear span of 20 feet supported on concrete piles. Each end is filled with stone well bedded below the bottom of the stream. Cost, \$1,317.00.

Oro and Tecumseh Bridges.—In the spring of 1921, a number of important highway bridges were carried away by an unusual flood. The work of replacing all these bridges was a heavy burden on the municipalities. The matter was reported to the Government and on investigation it was decided that the Department of Public Works should undertake the renewal of a number

of the bridges, the townships undertaking to supply all the gravel required and to do all the necessary team work. Four bridges were built by the Department.

Fourth Line Bridge.—Located over a creek on the road in front of the 4th Con. of Tecumseh. A standard concrete beam bridge with a clear span of 17 feet. The township furnished the reinforcing steel for this bridge.

Newton Bridge.—Located over a creek at Lot 24 on the road in front of the 10th Con. of Tecumseh. A standard concrete beam bridge with a clear span of 35 feet. The abutments are 18' 6" in height to the floor level.

Ninth Concession Bridge.—Located over a creek at Lot 21 on the road in front of the 9th Con. of Tecumseh. A standard concrete beam bridge with a clear span of 35 feet. The abutments are 14' 6" in height to the floor level.

Willow Creek Bridge, Oro.—Located over Willow Creek at Lot 19 on the road in front of the 3rd Con. of Oro. A standard concrete beam bridge with a clear span of 20 feet. The abutments are 11' 6" in height to the floor level. The approaches are well graded. The four bridges in Oro and Tecumseh were constructed at a cost of \$7,981.66 to the Department of Public Works. All the bridges in Simcoe County were constructed under the direction of Amos Train, Public Works Foreman.

GREY COUNTY BRIDGES.

Indian River Bridge, Keppel.—Located over the Indian River at Lot 34 on the road in front of Concession 18, Keppel. A standard concrete beam bridge, with a clear span of 25 feet. The abutments are 7 feet in height to the floor level. Long fills were placed at each end of the road. A concrete box culvert was also constructed in the vicinity of the bridge. Total cost, \$2,051.70. S. Cole was foreman in charge.

Walter's Falls Bridge.—Located over a branch of the Bighead River at Walter's Falls on Lot 2, Con. 12, Holland. A concrete arch bridge with a width of 12 feet and a height of 10 feet, inside measurement. The length at the top of the arch is 56 feet. The side walls are 3 feet wide at the base and 2' 6" at the spring line. The arching is 15" in depth at the key. It is reinforced throughout with $\frac{5}{8}$ " square twisted bars. Heavy wing walls are placed at 3 corners to hold the fill. A grist mill wall protects the fourth corner. The roadway provided is 22 feet wide. A very heavy fill was required to provide a proper roadway, as the fill extends 16 feet above the top of the arch, or 27 feet above the bottom of the stream. The work was completed in a very satisfactory manner. Total cost is \$4,072.00. S. Cole was foreman in charge.

NORTH BRUCE BRIDGES.

Sauble Bridge, Con. 12, Amabel.—Located over the Sauble River on the sideroad between lots 32 and 33 in the Lake Shore range of lots. It is a concrete arch bridge, with a clear span of 66 feet between footings. The roadway is 14 feet in clear width. The arch rings have a clear height of 12 feet above the spring line. The construction is fully described in the report on the Thir-

teenth Concession Bridge in the Parry Sound District. Sam Cole was foreman in charge. Total cost, \$6,780.00.

Sixth Line Bridge, Sauble River.—Located over the Sauble River at Lot 6 on the Sixth Line of Amabel. A steel bridge on concrete abutments. The steel span is 71 feet long "C to C" with a 14 foot clear roadway. The abutments are 18 feet in height to the floor level and 7 feet in width at the base. They are provided with wing walls 14 feet in length at each corner. The steel span including steel floor joist was supplied by the Dominion Bridge Co. at a cost of \$1,990.00. All the work, including the erection and painting of the steel, was done under the direction of Sam Cole, Public Works Foreman. Total cost of bridge was \$5,555.00.

VICTORIA AND HALIBURTON

Beech Lake Bridge, situated on Lot 16, Con. 3 of Stanhope, between Beech and Boscung Lakes. It is a timber bridge 131 feet long. The centre truss span, 30 feet long, is supported on framed bents that stand on crib foundations. Three spans of 16 feet each are placed at each end of the centre span. These spans are supported on framed bents resting on mud sills. Very little grading was required. P. R. Switzer was foreman in charge. Cost, \$1,976.26.

Bear Lake Bridge, Glamorgan.—Situated at Lot 30, Con. 2, Glamorgan. A timber bridge 35 feet long, with a clear span of 25 feet. The outside stringers are two lines of 10" x 12" timbers bolted together at 6 foot spaces by $3\frac{3}{4}$ " bolts. A 10" x 12" needle beam is placed under the floor stringers at the centre. The deck is supported on timber crib abutments stone filled. A heavy fill was placed at each end of the bridge. The work was done under the direction of Jos. Alsop, Reeve of the Township, under a plan prepared by this Department. Total cost, \$510.57.

Furnace Falls Bridge.—Situated over Burnt River at Lots 17 and 18, Con. 1, Snowdon. A concrete beam bridge with a clear span of 40 feet and an approach span of 15 feet. The abutments are solid concrete from 14 to 16 feet in height to the floor level. The outside beams with the railing act as girders, 6 feet in depth. The two centre beams 12" in depth are supported by an 18" floor beam, between the main girders. In the approach span the floor beams are 15" deep and 12" wide. The deck is well reinforced with square twisted bars. P. R. Switzer was foreman in charge. Total cost, \$3,606.50.

NORTH HASTINGS BRIDGES.

Jenkins Creek Bridge.—Located at Lot 6, Con. 12, Monteagle. A timber bridge with a 20 foot clear span. The abutments are 14 feet. The bridge is built entirely with cedar timber. The approaches are well graded with stone and gravel. Strong guard rails are placed at each side of bridge and fill. Cost, \$497.03.

Mullett Creek and Bradley Lake Bridges.—These bridges were reconstructed and shortened to 20 feet. The approaches were graded. Cost, \$587.52.

Papineau Creek Bridge.—Located at Lot 3, Con. 6, McClure. It has a 20 foot span. Abutments are cedar timber filled with stone. Approaches well graded. Cost, \$511.75.

Storring Bridge, Elzevir.—Located over the Scootamata River at Lot 6, Con. 9, of Elzevir. It is a concrete beam bridge with a clear span of 35 feet. The abutments are 12 feet in height to the floor level. The structure is well reinforced with square twisted bars. The bridge was constructed by the County bridge gang under plans prepared in this Department. Walter Wiggins directed the work. Total cost, \$2,786.07.

Swaynes Bridge.—Located over a creek at Lot 28, Con. 8, Limerick. A timber bridge with a 20 foot clear span. Crib abutments stone filled. The timber used was cedar. The approaches are well graded. Cost, \$491.00.

Fraser Creek Bridge.—Located at Lot 21, Con. 4, Carlow. This is a small bridge with a very extensive fill. The fill, 360 feet long, is of stone, top-dressed with gravel. A strong guard rail is placed at each side of bridge and fill. Cost, \$939.00.

York River Bridge, Carlow.—Located over the York River at Lot 20, Con. 10, Carlow. It is a timber structure 122 feet with a fill 34 feet long at each end. It has 3 spans of 30, 32 and 33 feet. The deck over each span is supported by a King truss. The timber in the old piers was removed to low-water level and rebuilt with new timber for a height of 10 feet. The piers are filled with stone. The noses of centre piers are protected with 8 inch angle-irons. Total cost, \$2,488.53.

Waterhouse Creek Bridge.—Located at Lot 4, Con. 15, Faraday. It is a pile structure 30 feet long, with 3 pile bents. The timber is all cedar. Approaches well graded. Total cost, \$400.00.

Walter Wiggins, Road Inspector, directed the work on all bridges in North Hastings.

ADDINGTON BRIDGES.

Beaver Lake and Salmon River Bridge, Sheffield.—Located over the Salmon River near Beaver Lake, Lot 12, Con. 7, Sheffield. It is a 60 foot steel span on concrete abutments. The south abutment consists of a stone-filled timber crib built up to low water level. A concrete pier rests on this crib. The pier is 7 feet in height to floor level. At the north end a long rock fill is placed.

The concrete bridge seat is built up on this rock fill from low-water level. The bridge has a concrete floor. The steel span was furnished by the Hamilton Bridge Company at a cost of \$2,730.00. Total cost of bridge was \$4,997.92.

Bolton Creek Bridge.—Located over Bolton Creek in Oso on the road between Clarendon and Zeland. A timber bridge with a clear span of 12 feet. The abutments are cedar cribs, stone filled. The approaches consist of stone fills resting on long timber foundations. The timber is 35 feet long and is buried in the bog. At the north end of the bridge a rock ledge was cut to ease the grade. The rock cut is 35 feet long, 12 feet wide and 4 feet in depth. The approaches are well gravelled 100 feet in length at each end. Cost, \$798.00.

Love Mill Bridge, Canonto.—Located over the Clyde River at the Head of Love's Mill Pond on the Ompah-Folger Road. It is a concrete bridge with a cover of concrete on steel beams. The bridge has a clear span of 14 feet. On the west end the fill is 63 feet long and 8 feet in height. The hill adjoining was cut down and graded over a length of 150 feet. On the east end, the hill was cut from 2 to 5 feet over a length of 120 feet.

Eagle Creek Bridge.—Located over Eagle Creek at Lot 26, Con. 1, Hinchinbrooke. This is a concrete bridge with a clear span of 11 feet. The abutments are 9 feet in height. The floor is a concrete slab well reinforced. A substantial guard rail is placed at each side of bridge. The approaches are well graded and gravelled. Cost, \$459.54.

Clyde River Bridge, Trout Creek, Canonto.—Located on a new road near the Lawrence Mill. It has a clear span of 12 feet. Stone abutments 6 feet high. The floor is of flatted cedar. Approaches well graded and gravelled. Cost, \$800.00.

All bridges in Addington were constructed under the direction of W. W. Pringle, Road Inspector for the district.

RENFREW DISTRICT BRIDGES.

Brennan Creek Bridge.—Located over Brennan Creek, Lot 16, Con. "A", Hagarty. A timber bridge with a clear span of 20 feet. Cedar crib abutments with cedar deck with railing. Approaches about 25 feet long at each end, 8 feet in height, filled with stone and gravelled. Cost, \$487.00.

Enos Creek Bridge.—Located near boundary of Raglan and Lyndock on the Madawaska Road. It is a timber bridge with a span of 28 feet. The abutments are stone-filled cribs, 7 feet in height. The approaches are well graded and gravelled. Cost, \$500.00

Killaloe Village Bridge.—Situating over Brennan Creek in the village of Killaloe. It is concrete, with a clear span of 30 feet. The roadway is 18 feet in clear width. The abutments are 13 feet in height to floor level. The 8" floor slab is carried on 4 main beams. The beams are 12 inches wide and 36" in depth, reinforced with six 1" square twisted bars. The railing is of standard moulded posts. The approaches are well graded. J. W. Davis was foreman in charge. Total cost, \$2,141.00.

Little Madawaska Bridge.—Located over a creek at Lot 190, N.B.R., in the township of Sherwood. A timber bridge with two 16 foot spans. The cedar deck is supported on 3 crib piers. Approaches well graded. Cost, \$399.80.

Quadville Bridge.—Located in the village of Quadville in the township of Lyndock. A timber bridge with a centre span of 30 feet and 2 short end spans. Timber crib abutments support the ends and the centre truss span is supported on frame bents of 10" x 10" timbers, 4 posts to each bent. The bridge has been raised 2½ feet above the former height. The approaches are well graded and strong guard rails placed at each side of bridge and fill. Cost, \$1,220.00.

Smeltzer Creek Bridge.—Located over the Smeltzer Creek at Lot 24, Con. 19, Raglan. A timber bridge with a 30 foot span. Five new cedar stringers were put on and a new cover of 6" flatted cedar. A fill 30 feet long and 6 feet deep was put in and a strong guard rail placed at each side of bridge and fill. Cost, \$394.00.

Silver Creek Bridge.—Located over Silver Lake Creek in South Algoma. A timber bridge with a clear span of 20 feet. The abutments are cedar crib piers filled with stone. Five lines of stringers carry a 3" cedar plank floor. The approaches are well graded. Cost, \$502.00.

Varin Bridge, Griffith.—A timber bridge with 3 spans of 25 feet each. The deck is supported on timber crib piers 10 feet in height. The approaches are well graded. Part of the timber used was taken from the old Griffith Bridge. The balance of timber used was supplied free of cost. Expenditure, \$399.00.

REPAIRING AND RECONSTRUCTION OF BRIDGES AND OTHER PUBLIC WORKS FROM THE MAINTENANCE FUND.

RAINY RIVER DISTRICT.

Bergland Road Bridges.—Three bridges 45 feet long were recovered with 3" plank. The Bergland Bridge was furnished with a new Queen truss span 40 feet in length. \$284.40 was expended on these bridges.

Grassey River Bridge, McCrosson.—This is a long timber bridge at the north end of the Bergland Road. An entire new deck was placed on the bridge. Cost, \$423.44

Mather Bridge, 8 and 9, Con. 1.—A new deck was placed on the bridge and the approaches regraded.

Morley Bridge, between Secs. 34 and 35.—A new deck was placed on the bridge and the washed-out approaches regraded.

Section 13 Bridge, Dobie.—A new timber bridge with a 20 feet span constructed to replace a bridge carried away by the flood in the spring. Cost, \$431.28.

KENORA DISTRICT BRIDGES.

Anderson Road Bridges.—Two bridges on the Anderson Road were recovered.

Keewatin Town Bridge.—The long bridge over the bay between the town of Keewatin and the C.P.R. station was overhauled. The deck was practically renewed. Cost, \$985.93.

Pigeon Bridge, Lot 7, Con. 1, Zealand.—This bridge is 112 feet long and 15 feet in height. The structure was generally repaired, all defective timber removed and replaced. New bracing was put on and a new cover and railing.

Nugget Creek Bridge, Lot 6, Con. 1, Zealand.—Bridge is 272 feet long. All defective plank was replaced in the floor. New braces put on.

THUNDER BAY BRIDGES.

Marks Bridge, Con. 3.—This bridge was furnished with a new cover and the approaches properly graded. Cost, \$189.36.

Pitch Creek Bridge, Con. 3, O'Connor.—A new timber bridge with a span of 16 feet. Pile abutments. Cost, \$356.13.

Sunshine Bridge, Dawson Road.—One of the bents of the bridge was straightened. One of the piers, that had been undermined, was put in place and stoned to prevent further scour, and the approaches were graded. Cost, \$100.00.

Whitewood Creek Bridge, Con. 4, O'Connor.—A new timber bridge with an 18' span. Pile piers. Cost, \$406.70.

SOO DISTRICT BRIDGES.

Goulais Bridge, Fenwick.—The centre pier, which was damaged by the ice, was replanked and the steel painted.

Goulais Bridge, Van Horne.—The centre pier of this bridge was badly damaged by the heavy ice floes. A few broken piles were replaced and the crib timber raised to high-water level. A steel plate nose is to be placed on this bridge, as the timber cannot withstand the jarring from the ice floes.

SUDBURY DISTRICT BRIDGES.

Morgan Vermilion Bridge.—The west end of the bridge was washed out. A new frame bent of 10" x 10" timbers was placed to carry the deck, and the washout filled with rock.

Vermilion Bridge, Balfour.—Work here consisted of filling west end with rock. At the east end, a rock fill 40 feet long and five feet high was placed to prevent the water crossing and carrying away the grade. The banks are of light sand, and rock facing is the only way to prevent erosion.

ALGOMA DISTRICT BRIDGES.

Alma Creek Bridge, Lot 5, Con. 8, Patton.—Repairs consist of new timbers in west abutment. Three new stringers. A new floor of flatted cedar 6" thick. Also a new railing. Cost, \$153.76.

Dausey Bridge, Lot 5, Con. 4, Cobden.—Work consisted of a fill of earth and rock at each end of bridge. At the south end the fill is 12 feet long and 10 feet high. At the north end, the fill is 10 feet long and 10 feet high. Both fills are top-dressed with gravel. Cost, \$198.75.

Graham Bridge, on Little Serpent, Sec. 18, Victoria.—This bridge is 148 feet long. Repairs consisted of new 10" x 12" pine stringers on two spans

of the bridge. Fifty-three feet in length of the floor was renewed with pine plank and the balance of floor repaired. Cost, \$286.96.

Galbraith Bridge, Lot 2, Con. 4, over the east branch of the Thessalon River.—This bridge is 60 feet long. Repairs consisted of a new floor of 3" hemlock plank. Five new cedar stringers on the west span and one new stringer on the centre span. A new railing throughout. Cost, \$147.26.

Haines Bridge, Lot 11, Con. 4, Aberdeen.—A new timber bridge with a span of 12 feet. Cedar pile abutments, stringers and floor flatted cedar. Strong guard rails in place. The new bridge is 4 feet higher than the old one and the approaches are properly graded to the new elevation. Cost, \$386.70.

La Cloche Bridge, Lots 8 and 9, Con. 1, May.—This bridge is 150 feet long. Repairs consisted of two pine stringers 10" x 12" on the centre span and two pine stringers on the south span. A new set of stringers on the north span and a new floor of 3" pine plank throughout. New guard rails were also put on.

Little Rapids Bridge.—The south end of the concrete pile bridge over the Little Thessalon near Little Rapids had been lowered about 18 inches at one side by an explosion of dynamite and the approach had been washed away by a flood. The repairs consisted of levelling up the floor and replacing the washed out fill with rock. 164 loads of stone were placed in the fill and top-dressed with gravel. Strong guard rails placed at each side of new fill. Cost, \$562.11.

Little Serpent Bridge, Sec. 23, Shedden.—This bridge is 100 feet long. The centre span is 46 feet long. Repairs consisted of a new truss, 4 lines of 10" x 12" stringers, new needle beams. All defective parts of floor were removed and replaced with 5" flatted cedar.

Mud Creek Bridge, Lot 3, Con. 6, Bright.—Repairs consisted of the approach to this bridge was only 9 feet wide. This approach was widened out to 22 feet. The rock fill on each side of old grade is 6 feet wide and 6 feet high, 34 feet long. At the north end of bridge a washout was filled with stone. Cost, \$122.50.

Mississauga Bridge, Thompson.—This is a steel bridge 366 feet in length. The repairs consisted of an entire new floor of 3" pine plank. All defective parts of wheel guard were removed and replaced with 4" x 6" timbers. Cost, \$996.85.

Victoria Bridge, Sec. 34, on River Road between Massey and Walford.—This is a culvert 6 feet wide and 6 feet high. Cedar abutments 30 feet long at the bottom and 18 feet long at the top were put in on stone foundations. The top consists of 6" flatted cedar. The fill at each side is 20 feet wide and 6 feet in height, extending back 30 feet from culvert. A strong guard rail is placed at each side of bridge and fill. Cost, \$127.50.

Thessalon Bridge, Con. 2, Galbraith.—Over the east branch of the Thessalon River on the main road between Ophir and Dunns Valley. A new bridge with a span of 16 feet built entirely of cedar. Pile abutments with five lines of

10" x 12" flatted stringers. Flatted floor. A strong guard rail on each side of bridge and fill. The bridge was raised 4 feet above old level. A fill of earth and stone extends back 40 feet from the bridge. A retaining wall of stone 2½ feet thick and 9 feet high protects the fill. Cost, \$193.83.

Thessalon Bridge, Lot 1, Con. 5, Aberdeen.—This bridge is 90 feet long. The repairs consisted of a new bent of piles at west end. 2 new piles in 2nd bent, one new pile in east end bent. New caps and new braces 4" x 6". A new truss of 10" x 10" timber. New 10" x 12" stringers on the west span. One new stringer 10" x 12", 50 feet long on centre span. An entire new floor of flatted cedar, with new guard rails. A new fill on stone on a brush layer bottom was placed in a washout at west end of bridge. Cost, \$538.70.

Wings Bridge, located at Lot 5, Con. 3, Plummer.—A new timber bridge over the Thessalon River. Overall length 97 feet. It has a centre Queen truss span of 47' 6". Three approach spans are placed at south end and one span at the north end. The deck is carried on 8 pile bents. Truss timbers are 10" x 12", flatted stringers. 3" plank floor. Approaches well graded.

STURGEON FALLS BRIDGES.

Deer Creek Bridge, Hugel-Kirk Townline.—Repairs consisted of replacing 3 timbers in the east end abutment and filling in a washout at the east end with rock.

Deer Creek Bridge, Con. 1, Ratter.—Locally known as the Mingay Bridge. The deck had been carried away by a flood. The old material was all recovered and replaced. It was securely bolted together and fastened securely to the abutments.

Deer Creek Bridge, Con. 2, Ratter.—Locally known as the Carmichael Bridge. A serious washout had occurred at each end of this bridge. Owing to difficulty of getting rock to fill in the holes, it was decided to extend the timber deck. Stringers 25 feet long were laid from the bridge to the solid bank at each end and a cover of 2" plank was put on. The old deck was overhauled and properly repaired.

Deer Creek Bridge, at Lot 10, Hugel-Kirkpatrick Townline.—Locally known as Hickey Bridge. The old bridge was removed. A rock fill was placed at each end of the bridge up to water level. Timber cribs 8' x 14' and 8 feet high were built up from the rock fills. The span 20 feet wide was covered with 5 lines of flatted stringers with a floor of tamarac plank. The cribs were partly filled with rock and the approaches properly graded. A strong guard rail was placed at each side of bridge and fill.

Dunnett Bridge, Lot 5, Con. 4.—The old bridge here was 40 feet long. The new bridge has a span of 15 feet. Pile abutments back-sheeted with cedar. Five lines of flatted stringers. Floor 3" pine plank. Guard rail of pine. Approaches filled with rock and gravel.

Grant Field Bridge.—Located on the boundary of Grant and Field. Repairs consisted of a new deck of 5 lines of flatted cedar stringers with a floor of 3" tamarac plank. New railing, span 27 feet. Approaches properly graded.

Hagar Siding Bridge, Veuve River.—This bridge was badly damaged by the ice and a serious washout had been made at the south end of bridge. The deck was moved back into place. A new crib abutment 6 x 17 feet and 7 feet in height was built in the washout, 15 feet from the old abutment, providing a new waterway. The new pier is filled with rock and the deck extended to cover the new extension. Glance piers 6 x 16 feet and 6 feet high were placed upstream from the old piers to protect them from the ice doing further damage.

McCarthy Creek Bridge, Gibbons.—Repairs consisted of replacing two burnt piles and putting on an entire new deck, including the railing. The approaches were graded.

River Valley Bridge.—This is a new bridge, comprising 3 steel spans on timber pile piers. Last winter a large quantity of pulpwood was dumped into the river immediately below the bridge. When the spring flood came on this pulpwood did not move out and a very heavy log jam formed above the bridge, completely blocking the river. The result was a washout at each end of the bridge. At the south end, the washout was so deep that the pile pier under the steel dropped about two feet. New piles were driven at each side of the steel and also behind the old pier. The steel was then jacked up and a new seat put in place. The washout at each end was filled with rock and the bridge made as secure as before the damage was done.

Shea's Bridge, Lot 8, Con. 5, Dunnett.—Located over south branch of Veuve River. The old bridge consisted of a deck on timber cribs. The bottom is very soft and the centre cribs canted over, throwing the deck out of line and rendering the bridge unfit for service. The new bridge is a pile trestle of 5 spans. The end bents have 4 piles in each and the other bents have 5 piles in each. The old stringers were made use of and a new floor of 2" pine plank and a new railing were put on. The bridge was shortened 19 feet from the former length and the space was properly filled.

Smoky Creek Bridge, Grant.—Located at Lot 8, Con. 1. A new timber bridge with a clear span of 40 feet. A queen truss is carried on pile abutments. Truss timbers 10" x 12". Stringers, flatted timbers; floor, 3" pine plank. Approaches well graded.

Warren Bridge.—A steel bridge over the Veuve River. Repairs consisted of putting on a new floor of 3" pine and tamarac plank and replacing some defective stringers.

Veuve Bridge, Lot 9, Dunnett.—Located on the Trunk Road. The deck of this bridge was moved by high water and ice. Repairs consisted of replacing the deck and securely spiking it to the abutments.

TEMISKAMING BRIDGES.

Elk Lake Bridge.—The long bridge over the Narrows at the town of Elk Lake was provided with a new floor of 3" pine and tamarac plank. The railing was also overhauled and put in proper shape.

Harley-Kerns Townline Bridge.—Bridge reconstructed. Five spans of 15 feet each on framed bents. Caps and mudsills flatted cedar. Floor joist 8" flatted cedar; floor 2" plank. Railing and wheelguard in place.

Henwood Bridge, Lot 1, in 2nd Con.—Bridge across a ravine. Length 48 feet, height 8 feet. Pile posts, set in ground about 7 feet and well braced, carry a deck of flatted tamarac. Strong guard rails are placed on bridge.

Henwood Bridge, Lots 10 and 11, Con. 6.—One of the cribs had been undermined with the water and was badly out of shape. The crib was properly straightened and well drift-bolted. Ten loads of stone were placed at the front of the crib to protect the bottom from scour.

Hilliardton Scow Ferry.—A new scow ferry was placed on the White River at Hilliardton, to take care of the traffic until the new bridge is erected to take the place of the bridge carried away by the jams last spring.

Little Otter Bridge, Ingram-Hilliard Townline.—This bridge is 68 feet long and has a centre span of 36 feet and end spans of 16 feet each. The east end of truss rests on a pile pier and the west end on a crib pier well bedded and filled with stone. The stringers are flatted tamarac and floor of 3" pine plank. A strong guard rail on each side of bridge.

Kerns Townline Steel Bridge.—One of the concrete supports of this bridge was undermined by the water. This support was properly underpinned and a stone breakwater constructed to divert the current into the proper channel.

Jean Baptiste Bridge, Lot 12, Con. 5, Henwood.—A new bridge 124 feet long. Centre span 48 feet, with two 16-foot spans at each end. The truss rests on double pile piers. Balance of bridge is a pile trestle. The centre piers are sheeted with 3" plank. Floor joist 4" x 12" pine, 5 lines; cover 3" plank. A strong guard rail is placed at each side of bridge. Approaches well graded. D. H. McIntosh was foreman in charge.

Wabis Bridge Timber Salvage.—A number of the Wabis bridges were carried away by the ice in the spring. A quantity of the bridge timber was saved from the river and lake. \$315.00 was expended on this work.

Wabis Bridge, Lot 2, Harley-Dymond Boundary.—A new bridge 120 feet long. Centre span 60 feet. West end, one 16 foot span; east end, two 16-foot spans. The centre span rests on double pile piers. Balance of bridge is pile trestle. Truss timbers, corbels and caps are 10" x 12" timbers. Floor joist 5 lines of 5" x 12" pine. Strong guard rails at each side of bridge. The whole structure is well painted. The approaches are properly graded.

Barber Timber Camp.—In the early winter of 1921, D. H. McIntosh, Foreman, established a camp in the Township of Barber, on the Montreal River, for the purpose of taking out pine timber for bridge construction. During the winter, the logs were placed on the river. In the spring the logs were rafted down to Latchford and cut into plank and square timber, at a custom mill. The cut from the mill gave us a total of 325,000 feet B.M. In addition to the sawn timber, a quantity of pile timber was also brought down. The entire expenditure, including the cost of sawing at the mill, was \$6,267.00, or about \$19.00 per M. Similar timber could not be secured at a price less than \$50.00 per M.

PARRY SOUND DISTRICT BRIDGES.

Bella Lake Bridge.—A new timber bridge over the Narrows of Bella Lake, in the Township of Ferguson. The bridge has a clear span of 16 feet. \$267.25 was expended on the work.

Bethune Bridge, 5 Sideline, Con. 10.—A new deck of tamarac and cedar was placed on this bridge. Cost \$100.06.

Blackwater Bridge, Christie and McKellar, Lot 18, Con. 1.—A new timber bridge, crib abutments, stone filled. The deck, stringers and floor are of flatted cedar. Approaches well graded. Cost \$246.36.

Burpee Bridge, Lots 1 and 2, Con. 2.—An old timber bridge 40 feet long, over a gully and a small stream, was replaced with a stone culvert and fill. The fill is of earth and stone and is about 6 feet in height. Cost \$61.50.

Commanda Creek Bridge, Lot 35, Con. 10, Pringle.—This bridge has a clear span of 15 feet, with timber crib abutments. The top timbers of the cribs were removed and replaced with new timber. A new deck was put on. 10" x 12" stringers of pine, with a floor of 3" hemlock plank. Guard rails were put on and the approaches were properly graded. Cost \$401.25.

Commanda Bridge, Con. 7, Lount.—Span 14 feet clear, crib abutments; stringers 10" x 12" pine. Cover 6" flatted cedar. Approaches properly graded. Cost \$144.00.

Golden Valley Bridge, Lot 6, Con. 9, Pringle.—Bridge 56 feet long. A new cover of 3" hemlock plank was put on. Also a new railing on each side of bridge. Cost \$112.27.

Steidler Bridge, Lot 5, Con. 6, Hagerman.—Bridge is 120 feet long, with a 40-foot centre span and 4 spans of 20 feet each. Bridge is built on pile piers. Caps, truss, stringers and floor are all of flatted tamarac. Cost \$958.89.

Wolf River Bridge, Con. 5, Hardy.—A new deck was placed on this bridge. The stringers are 10" x 10" oak and the floor is of flatted cedar. Cost \$192.00.

MUSKOKA DISTRICT BRIDGES.

High Bridge, Huntsville Locks.—The timbers in the approaches to the steel span on this bridge became badly rotted and the floor dangerous to traffic. A number of the main posts were replaced with new timbers. In the deck, many defective stringers were replaced and all defective parts of the floor renewed. The bridge is now in good condition. Cost \$466.69.

Jo River Bridge.—This bridge is about 340 feet long, built entirely of hemlock. The substructure consists of framed bents on mudsills. Many of the posts have decayed at the water line. The stringers are all decayed and the floor is not fit for traffic. In order to keep the bridge open to traffic, two lines of new stringers were put in under the wheel track. The defective posts were strengthened with plank spiked above and below the defective parts.

VICTORIA AND HALIBURTON BRIDGES.

Oxtongue River Bridge, McClintock, Lot 6, Con. 13.—This bridge is 110 feet long. The piers and abutments were removed down to water level and rebuilt with sound timber. A new deck of flatted stringers and cover of 2" plank was put on. Approaches graded. Cost \$230.68.

RENFREW DISTRICT BRIDGES.

Dam Lake Bridge, Lot 24, Con. 9, Radcliffe.—Two new stringers were put on and 65 feet of new covering of 6" flatted cedar. Cost \$100.50.

Consta Creek Bridge, Lot 18, one mile east of the village of Dacre, in the Township of Brougham.—One of the piers had slipped from a stone foundation. This pier was rebuilt and a new deck with railing put on. Cost \$299.00.

McMaster Creek Bridge, Lot 32, Con. 13, Raglan.—A new cover of flatted cedar, with new railing, was placed on this bridge, which is 65 feet long. Cost \$185.00.

McMaster Creek Bridge, Con. 15.—On townline between Raglan and Lyn-dock. A new bridge with a span of 18 feet. Timber crib abutments, stone filled deck. Floors and stringers of flatted cedar. New guard rails. The fill at west end of bridge is from 2 to 6 feet high. Cost \$392.50.

Stack Creek Bridge, Lot 10, Con. 2, Hagarty.—Bridge has a span of 10 feet. Timber crib piers. Floor and stringers all of flatted cedar. Approaches graded. Cost \$200.00.

Whalen Creek Bridge, on the Brudenell-Killaloe Road.—Bridge has a clear span of 12 feet. Timber crib abutments, stone filled. Stringers and floor, flatted cedar. A fill of stone and gravel 30 feet long was put in. Cost \$76.59.

White Lake Bridge, Lot 29, Con. 13, Raglan.—One of the piers was jacked up and underpinned. 36 feet in length was recovered with 6" flatted cedar. 60 feet of new railing placed at each side of bridge and fill. Cost \$200.00.

REPAINTING STEEL BRIDGES.

At the outbreak of the war in the fall of 1914, we had a crew engaged in cleaning and repainting steel bridges that had been erected by the Public Works Department. This crew had started in Muskoka and had worked as far west as Kenora. The work of repainting was discontinued at that time and had not been resumed.

We had found through experience that the cleaning of the old bridges from paint, rust and scale, with scrapers and brushes, was very expensive. Hand painting was also slow and expensive. Investigation proved that the cleaning of the steel could be accomplished better, more quickly and cheaper

with a sand blast. We called for tenders for an outfit and purchased the one best suited to our need. This outfit comprises:

- (1) No. 2 Zin-Ho Portable Air Compressor, 42 cubic feet air capacity, on trucks, with gasoline engine.
- (2) No. 309 McLeod Bridge and Structural Steel Sand Blast Machine, mounted on two wheels, tank capacity 309 pounds.
- (3) No. 485 McLeod Sprayer, on one wheel truck.

These machines were all supplied with the necessary hose and attachments and have given complete satisfaction. The cost of repainting has been greatly reduced. The price complete was \$2,654.00. E. C. Dolmage is foreman in charge of repainting, and operates the outfit with the aid of two assistants.

LIST OF BRIDGES CLEANED AND REPAINTED DURING THE YEAR 1921.
WORK WAS STARTED ON JULY 26TH.

Sharp's Creek Bridge, Draper, 1 span, length 60 feet.
 South Fall Bridge, Draper, 2 spans, length 90 feet.
 Trethewey's Falls Bridge, Draper, 1 span, 60 feet long.
 Black Bridge, South Branch, Draper, 2 spans, 120 feet in length.
 Matthiasville Bridge, Draper, 1 span, 60 feet long.
 Peterson Bridge, Oakley, 1 span, 60 feet long.
 Thompson Bridge, Clear Lake, Oakley, 1 span, 60 feet long.
 Gartersnake Bridge, Ryde, 1 span, 25 feet long.
 Housey's Rapids Bridge, Ryde, 1 span, 80 feet long.
 Bens Creek Bridge, Ryde, 1 span, 25 feet long.
 Buck Creek Bridge, Ryde, 1 span, 45 feet long.
 Doe Lake Bridge, Draper, 1 span, 25 feet long.
 Kehoe's Bridge, Dalton, 1 span, 60 feet long.
 Wasdale Bridge, Rama and Morrison, 2 spans, 140 feet in length.
 Severn Bridge, Orillia and Morrison, 3 spans, length 225 feet.
 High Bridge, Sparrow Lake Road, Morrison, 1 span, length 60 feet.
 Koshee Bridge, Con. 6, Morrison, 5 spans, length 90 feet.
 Big Koshee Bridge, Morrison, 1 span, length 35 feet.
 Washago Bridge, North Orillia, 1 span, length 60 feet.
 Carlyon Bridge, Con. 6, North Orillia, 1 span, length 70 feet.
 Thorburn Bridge, Lot 4, Con. 4, North Orillia, 1 span, length 25 feet.
 Marchmont Bridge, Con. 1, North Orillia, 1 span, length 40 feet.
 Lovering Bridge, Con. 2, Matchedash, 1 span, length 60 feet.
 Abbott's Bridge, Lot 4, Con. 3, Matchedash, 1 span, length 40 feet.
 Bala Bridge, North Channel, Bala, 3 spans, length 150 feet.
 Bala Bridge, South Channel, Bala, 5 spans, length 113 feet.
 Oakley Bridge, Oakley and McLean, 2 spans, length 110 feet.
 High Falls Bridge, Macaulay, 4 spans, length 180 feet.
 Baysville Bridge, McLean, 2 spans, length 180 feet.

The entire expenditure in connection with the painting of above bridges, including wages, board, transportation, paint, etc., was \$1,625.00, or practically \$56.00 for each bridge.

DRAINAGE WORKS CONSTRUCTED BY THE
PUBLIC WORKS DEPARTMENT.

RAINY RIVER DRAINAGE.

Blue Drain, Section 10.—This work is a continuation of last year's. It runs north across section 10 a distance of 252 rods to the drain between sections 10 and 15. The drain has an average depth of 3 feet. Top width 6 feet, and bottom width 3 feet.

Carpenter Drain, Lots 10 and 11, Con. 2.—This drain starts at the townline between Carpenter and Lash and runs east on the centre line of the 2nd Concession of Carpenter, across Lot 12 and part of Lot 11 to a creek. The drain is 296 rods long. Depth 2 to $4\frac{1}{2}$ feet. Bottom width 4 to 5 feet. Top, 8 to 10 feet.

Devlin Drain, Section 33.—This is a short tap drain, 40 rods long, at south-west corner of Section 33. It drains the road west of Section 33. Later it will have to be extended to the Levallee River.

Dilke Drain, Section 34.—This is a tap drain for the Nelles-Dilke townline. It extends south from the townline through the east part of Section 34, Dilke, a distance of 100 rods and discharges into a ravine leading to Pine River. The drain has a bottom width of 3 feet. Depth from 2 to 3 feet with side slopes of 1 to 1.

Morley Drain, Section 34.—Drain commences at north-west corner of section 34, Morley, and runs east on north side of townline 46 rods. Thence south through section 34 a distance of 80 rods to a creek. On the townline, the drain is $2\frac{1}{2}$ feet deep, with a mean width of $4\frac{1}{2}$ feet. The tap drain is 3 feet deep with a mean width of 6 feet.

Nelles Drain, Section 6.—This is a tap drain for the road between sections 6 and 7, Nelles. It commences near the centre of section 6 and runs west on the road 62 rods, thence south into section 6, a distance of 179 rods. This drain has an average depth of 3 feet. Bottom width 3 and 4 feet. Top width 6 to 10 feet.

Richardson Drains, on Lots 6 and 7, Con. 1.—These drains are tap drains to drain the 2nd Con. Road of Richardson. The drain on Lot 6 commences near the centre of Lot 6 at the 2nd line and runs in a south-westerly course a distance of 394 rods to Pine River. The drain runs through flat land and an old creek bottom. It is from 2 to 3 feet deep and from 6 to 8 feet wide. The drain on Lot 7 commences at the 2nd line near the centre of the lot, runs south-east 120 rods to the 6th and 7th sideroad. Thence south along this road 140 rods to the Lot 6 drain. This drain follows a watercourse, is from 2 to 3 feet deep and from 6 to 8 feet wide.

This work was done under the direction of Frank Clement, Road Inspector. \$4,762.00 was expended on the work.

ALGOMA DISTRICT DRAINAGE.

Plummer Additional, Lots 7 and 8, Con. 5.—This drain is on the south side of the 5th Con. road, north of Lot 8. It runs along the road 88 rods to the townline, jogs 15 rods to the north, then extends into Johnston 70 rods and discharges into a marsh. The drain is about 18 inches deep and from 3 to 4 feet wide.

Thompson Drain, Section 21.—This is a tap drain for the road through Section 21. It runs on the S.E. $\frac{1}{4}$ Section 21, from the road east a distance of 160 rods, discharging into a creek. Depth 18 inches, width 3 feet.

Day Drain, Lots 11 and 12, Con. 3.—This is a tap drain for part of the townline between Day and Thessalon. It commences at the townline near the line between Lots 11 and 12, and runs north-east through Lots 11 and 12 in Day, a distance of 160 rods, discharging into Little Mud Lake. It forms an outlet for the Section 19 drain, dug in 1919.

Galbraith Drain, Lots 6 and 7, Con. 3.—Two small tap drains for the 3rd line of Galbraith. The tap on Lot 6 is 29 rods long; the tap on Lot 7 is 38 rods long. These join near the line between 6 and 7. The common outlet extends 127 rods to the south, discharging into the east branch of the Thessalon River.

Plummer Drain, Lot 11, Con. 2.—A drain and tap drain for the road between Lots 10 and 11, Con. 2, Plummer. The drain runs north along the west side of the south half of Lot 10, a distance of 120 rods, thence west 80 rods into Cariboo Lake. The drain is from 2 to 3 feet deep, with an average width of 5 feet.

Thompson Drain, Sections 22 and 23.—This work consists of cleaning out a creek on Sections 22 and 23. 200 rods of the creek were ditched and cleaned. It drains the road between these sections.

Victoria Drain, Sections 23 and 26.—This work consisted of removing rock and stone from Black Creek, on Section 26, also cleaning out 40 rods of the creek on the same lot. Two short tap ditches were dug from the road south of Section 23 to the creek to drain the road ditches.

McDonald Drain, Section 29.—A tap drain to drain a section of the old Soo-Bruce Mines road. It runs north-east on Section 29 a distance of 90 rods, discharging into a creek on Section 20.

Striker Drain, Lots 9 and 10, Con. 1.—Ditches were dug on each side of the road through Lots 9 and 10, Con. 1, Striker, over a distance of 165 rods. The ditches are 18 inches deep and from 3 to 4 feet wide.

Galbraith Drain, Lot 4, Con. 5.—This work consisted of clearing out a creek through Lot 4 in the 5th Con. of Galbraith to drain the road between Lots 4 and 5; 120 rods of creek were cleaned 6 to 8 feet wide and a beaver dam was opened up and an old lumberman's dam was removed from the creek, freeing the water and providing an outlet for the road ditches.

\$2,025.00 was spent on drainage work in Algoma. The work was done under the direction of Jas. Barkley, Road Inspector.

MANITOULIN DISTRICT DRAINAGE.

Mindemoya River Drain.—The Mindemoya River channel was cleared of logs, brush and rubbish for a width of 45 feet from Lot 8 in the 6th Con. of Campbell to the Falls at Lot 3 in the 9th Con., a distance of 580 rods.

Campbell Drain, Lots 8, 9, 10 and 11 in Con. 13.—This work commenced at Lot 8 on the 13th Con. road and extended south and west along a watercourse, a distance of 250 rods. The work consisted of clearing and deepening the watercourse where necessary.

Assiginack Drain, Lot 29, Con. 8.—A tap drain for a section of the road between Lots 28 and 29. The drain is 80 rods long and runs in a south-easterly direction to an outlet at the 9th line.

Bidwell Drain, Con. 10.—A tap drain for the road between Lots 28 and 29 in the 10th Con. The work consisted of clearing and deepening a watercourse west from the side road a distance of 28 rods. The culvert across the side road was also cleaned out and repaired.

Burpee Drain, Lots 20 to 27, in the 5th, 6th and 7th Cons.—The old creek bed was well cleared of logs, brush and rubbish for a width of 25 feet over a distance of 400 rods, extending from Lot 20 in the 7th Con. to a lake on Lot 27 in the 5th Con. The bed of the creek was also ditched where necessary. The ditching extended over a distance of 110 rods.

Dawson Drain, Con. 11, Lot 31.—A tap drain to drain the 30th side road. It is a short drain 20 rods long, running north-east from the side road. It also provides needed drainage for parts of Lots 30 and 31 in the 11th Con.

Robinson Drain, on road between Cons. 7 and 8, in front of Lots 22 and 23.—The drain is on the north side of the road. It is 90 rods long. It is from 3 to 4 feet deep and from 5 to 6 feet in width. It provides good drainage for a bad section of road and the adjacent lands.

SUDBURY DISTRICT DRAINAGE.

The following drains were opened up in the Sudbury District:

Balfour Township, drain on Lot 5, Con. 2, length 160 rods.

Balfour Township, drain on Lot 2, Con. 4, length 190 rods.

Balfour Township, drain on Lots 6, 7, 8, Con. 4, length 270 rods

Balfour Township, drain on Lot 5, Con. 6, length 130 rods.

Balfour Township, drain on Lot 9, Con. 6, length 240 rods.

Balfour and Creighton, drain on Lot 4, Con. 6, length 320 rods.

Bleazard, drain on Lot 5, Con. 5, length 206 rods.

Broder, drain on Lot 12, Con. 4, length 285 rods.

Broder, drain on Lots 4 and 5, Cons. 1 and 2, length 315 rods.

Capreol, drain on Lot 5, Con. 4, length 285 rods.

Dill, drain on Lot 9, Con. 3, length 70 rods.

Dill, drain on Lots 11 and 12, Con. 5, length 88 rods.

Lumsden, drain on Lots 5 and 6, Con. 1, length 108 rods.

The drainage work in the Sudbury District was done under the direction of Basile Ethier, Road Inspector.

STURGEON FALLS DRAINAGE.

McPherson Drain, Lots 4 and 5, Con. 5.—This work consists of ditching a creek bed across Lots 4 and 5, in the 5th Con. The drain is about one mile long, depth 3 feet. Bottom width 2 feet; side slopes 1 to 1.

Muskanonge Creek Drain.—This work consists of clearing the creek and banks of logs, brush and rubbish, deepening rapids and cutting channels through gravel and sand bars. The work extends across Lots 7, 8 and 9, a distance of about 500 rods, in the Township of Casimir.

MacPherson Drain, Lots 6 and 7, Con. 3.—This work consisted of ditching a watercourse across the north parts of Lots 6 and 7 in the 3rd concession. The banks are well cleared. The drain is about one mile long, is 3 feet deep, with side slopes 1" to 1". The drain has a good natural outlet in a creek.

MacPherson Drain, Lots 6, 7, 8 and 9, Con. 6.—This is a tap drain for the main road running south through Lot 6 in MacPherson. It runs west near the middle line of the lots in the 6th, a distance of 500 rods to a creek. The drain has a bottom width of 4 feet, is from 3 to 3½ feet deep, with side slopes of 1" to 1". It drains a bad section of road and is of great benefit to the farms which it crosses.

TEMISKAMING DISTRICT DRAINAGE

Sutton Creek, Con. 1, Casey.—Continuing from last year, the course was cleared 20 feet wide for a distance of 75 rods. 60 rods of the drain started last year was deepened and widened. Forty-five rods of new drain were opened up. The drain is 3 feet deep and from 8 to 9 feet wide.

Casey Drain, at Judge.—This drain runs from the 2nd Con. road south on the centre of Lot 10, south to Burwash Creek. The right of way is cleared 15 feet wide to a ravine running to the creek, clearing course in ravine and ditching 60 rods in ravine. This work is to be extended in 1922.

Brethour-Hilliard Drain, Con. 5.—This drain runs on the 5th Con. road across Lot 1, Brethour, and Lot 12, Hilliard, with an outlet 35 rods north into Otter Creek. In Hilliard, the ditch is 2½ feet deep, and in Brethour the ditch is 2½ feet deep, and from 5 to 7 feet wide.

Brethour South Boundary Drain.—This drain is south of Lots 9 and 10. It was constructed over a distance of 166 rods and the right of way cleared an extra distance of 37 rods. The ditch is 3½ feet deep and from 6 to 9 feet wide. It is to be continued next season.

Harley Drain, Lot 2 in 5th.—This drain has been constructed over a distance of 120 rods and the right of way cleared an extra forty rods. The ditch is 3 feet deep and is from 8 to 9 feet wide.

The work in Temiskaming was done under the direction of W. E. Kerr, Public Works Foreman.

NIPISSING DISTRICT DRAINAGE.

The following drains were opened up in the different townships in the District of Nipissing:

- Bonfield Township, Lot 19, Con. 1, 54 rods.
- Bonfield Township, Lot 30, Con. 2, 80 rods.
- Bonfield Township, Lot 6, Con. 10, 40 rods.
- Cameron Township, Lot 10, Con. 23, 60 rods.
- Chisholm Township, Lot 18, Con. 17, 42 rods.
- Chisholm Township, Lot 2, Con. 10, 105 rods.
- Chisholm Township, Lot 7, Con. 11, 80 rods.
- Chisholm Township, Lot 14, Con. 11, 55 rods.
- Chisholm Township, Lot 8, Con. 17, 50 rods.
- Chisholm Township, Lot 20, Con. 13, 41 rods.
- Chisholm Township, Lot 6, Con. 17, 50 rods.
- Chisholm Township, Lot 12, Con. 17 (rock), 60 feet.
- Ferris Township, on 20 sideroad, Con. 1, 160 rods.
- Ferris Township, Lots 22 and 23, Cons. 2 and 3, 90 rods.
- Ferris Township, Lot 9, Con. 6, 50 rods.
- Ferris Township, Lot 2, Con. 7, 50 rods.
- Ferris Township, Lot 17, Con. 7, 25 rods.
- Ferris Township, Lot 18, Con. 7, 110 rods.
- Ferris Township, Lot 13, Con. 15, 40 rods.
- Ferris Township, Lots 15 and 16, Con. 7, 80 rods.
- Ferris Township, Lots 22 and 23, Con. 10, 42 rods.
- Papineau Township, Lots 4 and 5, Con. 11, 93 rods.
- Papineau Township, Lot 16, Con. 11, 50 rods.
- Papineau Township, Lot 20, Con. 12, 40 rods.
- Widdifield Township, Lot 1, Con. A, 60 rods.
- Widdifield Township, Lot 14, Con. A., 50 rods.
- Widdifield Township, Lot 15, Con. A., 100 rods.
- Widdifield Township, Lot 18, Con. A, 150 rods.
- Widdifield Township, Lot 14, Con. A, 35 rods.
- Widdifield Township, Lot 17, Con. 1, 70 rods.
- Widdifield Township, Lot 21, Con. 3, 60 rods.

The drainage work in Nipissing was done under the direction of P. Rochefort, Road Inspector.

PARRY SOUND DRAINAGE.

Mills Drain, Con. 13.—A drain 100 rods long was opened up on Lots 13 and 14, Con. 13, Mills. The drain is 4 feet deep and from 8 to 10 feet wide. One-third of the work was supplied free of cost.

Armour Drain, Con. 12.—This drain runs across Lots 17, 18 and 19 in the 12th Con. of Armour. The depth is about 4 feet and the width from 6 to 9 feet. The work was done under the direction of John Orr, Road Inspector.

MUSKOKA DISTRICT DRAINAGE.

Ryde-Draper Townline Drain.—A badly drained section of road was relieved by the construction of 40 rods of drain 4 feet deep, on the townline at Lot 14.

Moon Chute Improvement.—A small channel east of the Rock Island at Moon Chute was widened to afford a better discharge for the Moon River during high water. This channel was widened to 30 feet down to low-water level.

McCully Drain, Medora.—A rock cut 36 feet long was made on Lot 33, Con. 2, Medora, to drain a section of the Bracebridge-Port Carling road.

Watt-Stephenson Townline Drain.—A badly drained section of this road was properly drained by opening up 200 rods of a creek on Lot 1, Con. 9, and also opening up 85 rods of a ditch on the townline.

EAST SIMCOE DRAINAGE.

North River Drainage.—A ledge of rock on Lot 3, Con. 4, Matchedash, was holding back water and causing the flooding of a large area of arable land. This ledge was blasted out for a length of 50 feet, 30 feet wide and 6 feet in depth, providing a good discharge for the penned-up water.

Willow Creek Drain, Vespra.—The work on Willow Creek was continued up from the point where the work stopped last fall. This season's work extends across Lots 10, 11, 12 and 13, a distance of about $4\frac{1}{2}$ miles. The work consists of clearing the creek and banks of logs, brush and rubbish. The work already done has had a wonderful effect on the swamp. The creek is rapidly enlarging and the adjoining lands will soon be brought under cultivation.

DRAINAGE IN GREY AND BRUCE.

Indian River Work, Con. 18, Keppel.—A rock obstruction in the Indian River in Con. 18, Keppel, was blasted over a length of 900 feet. A channel 7 feet wide and 3 feet deep was constructed through the ledge, allowing the escape of water that formerly submerged the low lands above the ledge.

Amabel Drain, Mud Lake.—The outlet of Mud Lake in Amabel was cleared of logs, brush and rubbish over a length of $4\frac{1}{2}$ miles. This work lowers the water of the lake and provides drainage for a large area of good lands. It also makes possible the proper drainage of roads in the vicinity.

Arran Lake Outlet.—This work consists of clearing out the creek, the outlet of Arran Lake, over a length of 2 miles. The creek was badly obstructed with willows, logs and rubbish. These were all removed, providing a clear channel 16 feet wide.

North-East Drain, Lots 28 and 29, Con. 18, Arran.—This work consists of opening up a drain 400 rods long. The drain averages $2\frac{1}{2}$ feet in depth and 6 feet in width.

Lindsay Township Drain, Lot 6, Cons. 3 and 4.—This drain is 170 rods long, $2\frac{1}{2}$ feet deep and 6 to 8 feet wide.

NORTH ONTARIO DISTRICT DRAINAGE.

Rama Drain, 17 and 18, Con. "D."—Owing to wet weather, only 1,000 feet of this drain was completed, but the right of way has been cleared throughout the whole course.

Campbell Drain, Con. 4 and 5, Rama.—This work commences at the line between Lots 15 and 16, Con. 4., and runs west and north through Lots 16 and 17, Con. 5, and across the C.N.R., and across a portion of the Indian Reserve. The work consisted of cleaning out an old drain. All logs, brush and rubbish were removed. Where needed the sides were trimmed, and the bottom was deepened 6 inches from the C.N.R. track to the lower end of drain.

Rama Drain, 17 and 18, Con. 2.—This drain has been opened up from end to end, but owing to wet weather the work was not fully completed.

The work in North Ontario was done under the direction of Neil Hayes, Road Inspector.

NORTH HASTINGS DRAINAGE.

Madoc Drain, Lots 3, 4 and 5, Cons. 8 and 9.—This drain is to relieve a low section of the 9th Con. road, in front of Lot 5. The drain extends across Lots 5, 4 and 3, discharging into a creek. It is from 1½ to 3 feet deep. Bottom width, upper section 3 feet, lower section 5 feet. Side slopes 1 to 1.

Marmora Drain, Long Swamp.—This is a drain to drain the Long Swamp road in Marmora. The road ditch is 7,400 feet long and the outlet 700 feet long. Depth 1½ to 3 feet. Bottom width 3 feet. Side slopes 1 to 1.

Monteagle Drain, Con. 11.—This drain is to drain a low section of road at Lot 9. The drain is 700 feet long in front of Lot 9, Con. 11, with an outlet to the north 700 feet long. The road ditch has a bottom width of 3 feet with a general depth of 18 inches. The outlet ditch has a bottom width of 4 feet, depth varying from 1 to 3 feet. Side slopes 1 to 1. \$1,950.27 was expended on the three drains, which were constructed under the direction of Walter Wiggins, Road Inspector.

ADDINGTON DISTRICT DRAINAGE.

Harlowe Road Drain, Kennebec.—This work is to drain a bad section on the Arden-Harlowe Road, at Lot 25 in the 7th Con. of Kennebec. The drain is about 100 rods long. It is from 2 to 3 feet deep, and from 6 to 8 feet wide.

Pickerel Creek Drain, Olden.—This work consisted of removing rock and boulders from a section of Pickerel Creek on Lot 4, Con. 3, in the Township of Olden. The obstruction to the creek caused the flooding of some 100 rods of the Babcock Road and also some 200 acres of valuable land. The drainage work in Addington was done under the direction of W. W. Pringle, Road Inspector.

I have the honour to be, Sir,

Your obedient servant,

A. J. HALFORD,

Engineer of Public Works.

Toronto, October 31st, 1921.

STATEMENTS
OF THE
ACCOUNTANT
OF
PUBLIC WORKS

Department of Public Works, Ontario
TORONTO, March 6th, 1922.

HONOURABLE F. C. BIGGS,

Minister of Public Works and Highways.

SIR,—I have the honour to submit detailed statements of Civil Government and Maintenance, and Repairs Government Buildings; also Capital Expenditure on Provincial Public Buildings and Public Works during the Fiscal Year which ended on the 31st of October, 1921.

I have the honour to be,

Sir,

Your obedient servant,

CLOTILDE KENTLETON,
Accountant Public Works.

STATEMENT OF EXPENDITURE, CIVIL GOVERNMENT, MAINTENANCE AND REPAIRS GOVERNMENT BUILDINGS, FOR YEAR ENDING, OCTOBER 31ST, 1921.

Department of Public Works, Ontario,
Toronto, March, 1922.

CLOTILDE KENTLETON,
Accountant, Public Works.

Department of Public Works, Ontario.
TORONTO, March 1st, 1922.

HONOURABLE F. C. BIGGS,
Minister of Public Works and Highways.

SIR,—I have the honour to submit the following statement showing the several contracts and bonds entered into with His Majesty during the twelve months ending 31st October, 1921, in connection with the Public Buildings and Works, subject to the control of the Public Works Department of Ontario.

I have the honour to be,

Sir,

Your obedient servant,

H. F. McNAUGHTEN,
Secretary and Law Clerk.

STATEMENT showing the several contracts and bonds entered into with His Majesty during the twelve months ending 31st October, 1921, in connection with the Public Buildings and Works subject to the control of the Public Works Department, Ontario.

Fifteenth Annual Report

OF THE

GAME AND FISHERIES DEPARTMENT

1921

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO:

Printed and Published by CLARKSON W. JAMES, Printer to the King's Most Excellent Majesty
1922

Printed by
THE RYERSON PRESS.

To His Honour HENRY COCKSHUTT, ESC.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I have the honour to submit herewith, for the information of Your Honour and the Legislative Assembly, the Fifteenth Annual Report of the Game and Fisheries Department of this Province.

I have the honour to be,

Your Honour's most obedient servant,

H. MILLS,

Minister of Mines.

Toronto, 1922

FIFTEENTH ANNUAL REPORT
OF THE
Game and Fisheries Department of
Ontario

To the Honourable H. MILLS,

Minister of Mines.

SIR,—I have the honour to place before you the Fifteenth Annual Report of the work of the Game and Fisheries Department for the fiscal year ending the 31st day of October, 1921. The net revenue of the Department continues to increase and for the first time it will be shown that the net surplus in the Department proper exceeds the total expenditures by \$37,755.12, and the total net revenue for the year amounts to \$379,739.16, of which amount the Department proper contributed \$325,363.99, and the Sales Branch \$54,375.17. A statement of the Sales Branch operations is shown elsewhere in this report.

Comparative Statement of Revenue and Expenditure—
1916-1921, Inc. as shown in the Public Accounts.

	Revenue.	Expenditure.	Surplus.
1916.....	\$174,186 71	\$157,681 94	\$16,504 77
1917.....	219,442 94	154,055 17	65,387 77
1918.....	258,671 62	167,795 22	90,876 40
1919.....	346,197 14	185,247 72	160,949 42
1920.....	466,550 86	239,978 13	226,572 73
1921.....	612,972 86	287,608 87	325,363 99
SALES BRANCH.			
1921.....	\$258,057 73	\$203,682 56	\$54,375 17

STATISTICS

The different figures and statements presented herein furnishing statistics of the Department have been carefully prepared and provides very interesting and valuable information.

FISH.

The commercial fisheries of the Province are shown in comparison, as follows:—

	1919	1920	1921
Gill Nets licensed (yards).....	5,960,158	5,501,827	6,181,883
Seines ".....	190	168	180
Pound Nets ".....	1,144	1,080	1,052
Hoop Nets ".....	1,417	1,442	1,445
Dip and Roll Nets licensed.....	36	29	41
Spears ".....	199	122	116
Hooks ".....	69,000	64,330	78,663
Number of men employed.....	4,156	3,693	3,600
Number of Tugs.....	123	124	116
" Gasoline Boats.....	768	803	924
" Sail or Row Boats.....	1,285	1,088	1,109
Estimated value of boats, ice houses, wharves and twine....	\$3,039,682 00	\$3,269,971 00	\$3,151,810 00
Aggregate Catch in Pounds.....	38,145,458	38,501,533	36,444,372
Estimated value to fishermen....	\$2,721,440 24	\$2,691,093 74	\$2,659,775 82

ANGLING.

The fee for non-resident Angling permits was increased from \$2.00 to \$5.00 during the year, and from this source a substantial increase in revenue has been obtained, while the reports received from almost every district show that game fish are still plentiful and furnishes ample sport to both resident and non-resident alike.

HATCHERIES.

A large and modern Hatchery was built and equipped by the Department during the year at Sault Ste. Marie, and all necessary arrangements made to fill it to capacity with whitefish, salmon trout and speckled trout spawn to be hatched and delivered during the coming season. A Hatchery at this point will fill a long-felt need of the district, as it is in the centre of very valuable commercial fisheries and also very accessible to many waters that abound in game fish, but which would soon become depleted without the assistance of artificial propagation. The location of this hatchery also renders the collection of commercial and game fish spawn possible with a reasonable amount of energy and expense.

A detailed report of the output of the various provincial hatcheries will be shown elsewhere in this report, and the summary as compared with the previous year can be considered satisfactory, which is as follows:—

	1920	1921
Whitefish Fry.....	43,985,000	115,950,000
Pickrel ".....	31,030,000	27,625,000
Lake Trout ".....	1,134,000	110,400
Herring ".....	920,000	9,740,000
Speckled Trout Fingerlings and Fry.....	286,700	1,147,500
Black Bass Fingerlings.....	427,200	773,500
Parent Bass.....	460	742
	<hr/>	<hr/>
	77,783,360	155,347,142

The demand for fry and fingerlings is greater than the present available supply, and the Department should extend this work as far as any reasonable expenditure will permit.

The total fry distributed yearly since 1912 is as follows:—

1912	150,000	1917	2,156,928
1913	173,815	1918	58,356,631
1914	598,630	1919	22,361,748
1915	1,697,425	1920	77,783,360
1916	1,570,450	1921	155,347,142

GAME SANCTUARIES.

At present only a few small areas are set aside by this Department, viz.,—

Miner Farm Sanctuary.
 Peasmarsh Farm Sanctuary.
 Nopiming Game Sanctuary.
 Eugenia Fish and Game Preserve.

The latter has only been recently established and only made possible to a large extent by the co-operation of the Hydro Electric Power Commission, who have given permission to use a large island exclusively for the rearing of water fowl

and other game birds and animals. The water on this Sanctuary will be protected and made attractive for water fowl of every specie while the collecting of speckled trout spawn at this point will prove beneficial when developed and distributed as fry to all suitable waters.

WILD CELERY AND WILD RICE.

During the year the Department caused a quantity of wild celery plants and wild rice seed to be placed in suitable waters in the districts of Muskoka, Parry Sound and other districts as far west as Rainy River and Kenora, and the results obtained have shown the success of the undertaking and worthy of further work of this nature, which is given every support by the many local fish and game associations. These plants reproduce and spread rapidly and will soon provide the needed food to attract water-fowl in the various districts.

GAME.

Moose and Deer.—In issuing resident moose and deer licenses for the year, a questionnaire was furnished with a view of ascertaining sportsmen's opinion on taking deer with dogs, and also as to open seasons. The results of this questionnaire by Counties or Districts were as follows:—

County or District	Favoring use of Dogs		Against use of Dogs		Totals	
	Local Hunters	non-local Hunters	Local Hunters	non-local Hunters	Favoring Dogs	Against Dogs
Addington.....	59	156	41	46	215	87
Algoma.....	337	163	722	140	500	862

Russell and Prescott.....	26	2			28	
Sudbury.....	157	319	367	206	476	573
Timiskaming.....	55	31	61	38	86	99
Thunder Bay.....	38	7	329	6	45	335
Victoria.....	73	21	30	11	94	41
Unclassified.....		621		272	621	272

SUMMARY

	Local Hunters	Non-Local Hunters	Total
Favoring use of Dogs.....	4,052	5,812	9,864
Against use of Dogs.....	3,911	2,252	6,163
Number of local hunters questioned.....	7,963		
Number of non-local hunters questioned.....		8,064	

The questionnaire was not submitted to settlers who are entitled to one deer each season without a license.

Number of hunters voting in favor of the present open seasons for deer.....	12,762
Number of hunters voting against the present open seasons for deer.....	1,056
Majority for present open seasons.....	11,706

Both deer and moose are reported to be quite plentiful; and licenses were issued in comparison with the previous year as follows:—

Resident Moose.....	1920	1921
“ Deer.....	1,988	1,989
Non-resident Hunting.....	16,943	18,689
	796	950

Ruffed Grouse commonly known as *Partridge*.—An open season for these game birds was once more in effect, and they have again become quite well established according to reports received from the districts where they are usually found.

Quail and Pheasants are reported to a limited extent only in the south-western part of the province.

Ducks and Geese are reported as plentiful and the season for same has been a satisfactory one to the sportsmen.

FURS.

The Fur market for the year has been quite satisfactory, and while it has been unsteady at times, yet inflated values were not obtained as in the previous year.

Licenses issued to Fur Dealers.....	1920	1921
“ “ Trappers.....	\$34,850 27	\$55,007 00
	75,223 54	99,360 00

These increases in revenue can be considered as satisfactory particularly when the market was such as to offer no extreme profits to either trapper or dealer, as was obtained during the early part of the 1920 season.

Beaver.—Are still being taken in large numbers.

Otter, Marten and Fisher.—Continue to be scarce.

Muskrat.—Show a slight increase over the previous year.

A comparison of pelts exported and tanned for the year as compared with the previous year is shown herewith:—

	1920	1921
	Exported and Tanned	Exported and Tanned
Beaver.....	96,006	95,479
Otter.....	4,094	4,759
Fisher.....	4,069	2,602
Marten.....	6,315	6,533
Mink.....	33,695	42,667
Muskrat.....	434,066	479,866
Bear.....	409x	1,494
Fox (Cross).....	39x	287
“ (Red).....	231x	5,282
“ (Silver or Black).....	11x	153
“ (White).....	351
“ (Not specified).....	240x	23
Lynx.....	170x	591
Raccoon.....	321x	11,951

Skunk	1,082x	47,121
Weasel	3,095x	58,898
Wolverin	12
Total	583,843	758,069

The figures marked with x cover a period of only five months of the year 1920. The estimated value to the trapper based on an average of the prices paid for the year is \$3,268,967.50.

FUR FARMING.

During the year fur farming permits were issued to keep for propagation purposes, approximately the following number of fur-bearing animals:—

Beaver.....	2	Fox (Black).....	103
Fisher.....	3	Lynx.....	2
Fox (Cross).....	240	Mink.....	83
Fox (Red).....	132	Raccoon.....	37
Fox (Silver).....	593	Skunk.....	74

ENFORCEMENT OF ACT.

The re-organization of the outside service was in effect for the first complete year, and the results obtained were very satisfactory. With a continuation of the system now established, a better enforcement of the laws will be attained than under the system discontinued in the fall of 1920.

ACKNOWLEDGMENT.

In closing this report I desire to state that the Department has received willing co-operation in all matters from the Federal Government, Railway Officials and from the members of all Fish and Game Protective Associations seeking to establish better conditions and conservation of all game and fish. The staff has been loyal and efficient, and to them considerable credit is due for the continued success of the Department.

All statistics referred to will be found elsewhere in this report, together with many other statistics in detail.

All of which is respectfully submitted.

I am,

Your obedient servant,

(Sgd.) D. McDONALD,

Deputy Minister of Game and Fisheries

D. McDonald, Esq.
Deputy Minister of Game and Fisheries,
Parliament Buildings.

Dear Sir:—

I have pleasure in handing you herewith a financial report of the Sales Branch for the fiscal year ending October 31st, 1921, by which you will note that there has been a surplus of cash received over expenditures amounting to \$54,375.17.

The total fish purchased for the year amounts to 2,055,706 lbs. as against 2,269,401 lbs. of the previous year, and the municipalities supplied during the past year being 85 with 237 dealers, against 94 municipalities with 214 dealers for the previous year.

All of which is respectfully submitted.

Yours truly,

(Sgd) Geo. H. Rapsey,
Superintendent.

TO HIS HONOUR HENRY COCKSHUTT,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Annual Report of the Department of Public Highways, relating to Highway Improvement in the Province of Ontario during the year 1921.

Respectfully submitted,

F. C. BIGGS,
Minister of Public Works and Highways.

TO THE HONOURABLE F. C. BIGGS,
Minister of Public Works and Highways,
Ontario.

SIR,—I have the honour to submit the Annual Report of the Department of Public Highways for the year 1921, having special reference to work on the Provincial Highway System under the Provincial Highways Act; work carried on by the several counties of Ontario under the Highway Improvement Act; and by township councils whose work is now subsidized under the Ontario Highways Act, 1920.

Reference is also made to the operation of the Motor Vehicles Act; and to other services within the purview of the Department of Public Highways.

I have the honour to be, Sir,

Yours respectfully,

W. A. McLEAN,
Deputy Minister of Highways.

Parliament Buildings, Toronto, April 26th, 1923.

HIGHWAY IMPROVEMENT IN ONTARIO

REPORT OF W. A. McLEAN, DEPUTY MINISTER

THE rural roads of Southern Ontario are now being methodically constructed and improved in a manner that pertains to few countries, and a continuance of which policy will finally result in a completed network of roads serving each farm and every community, and commensurate with the agricultural, commercial and industrial needs of the Province.

To the casual observer, the work on Provincial highways may seem to be of a disconnected and scattered nature. Nevertheless, the work is being carried out under a well defined system, which is steadily producing a continuous trunk-line plan of roads. It is a cardinal principle that roads should be constructed in proportion to the traffic over them. All parts of the Provincial system do not carry an equal amount of traffic. Near cities, traffic is dense, and paved roads are necessary to give service and reduce maintenance costs; in industrial communities, heavy motor truck traffic prevails and strong foundations are essential; on the outer branches of the system, traffic of all kinds is proportionately light, and tarred macadam or even gravel roads are economical and render every essential service. Continuity of Provincial roads is being steadily developed, and what may appear to the general public to be scattered improvements will in a short period be connected into a well standardized system of Provincial highways worthy of the name.

County councils, operating under the Highway Improvement Act, on 9,609 miles of county roads, are carrying out work on a well devised system of leading market roads, which branch from the Provincial highways, local markets and shipping centres.

The result is that, while a large number of farms are directly served on Provincial Highways and county roads, few of the remaining country homes are more than two or three miles away from such main roads. Township effort is thus greatly stimulated in the betterment of short local roads; and township councils and individual effort are now strongly directed to the improvement of what are classed as township roads. That is, property owners who, prior to the construction of the main roads, saw 6, 8 or 10 miles of bad road to be constructed from their farms to the local market, now find that there are only 2 or 3 miles to be graded and gravelled to link them up with an established main road. The result, as previously stated, is a marked stimulus of local effort, with the prospect that in a very few years the network of good roads in Ontario will be complete.

PROVINCIAL HIGHWAYS

The model set by Provincial highways is effecting a marked improvement throughout the Province in the methods of constructing and maintaining township and county roads. Provincial highways have demonstrated to the public, and to municipal councils, the advantages of better grading, better drainage, spreading of gravel, systematic dragging, and other details of construction and maintenance.

Instruction and advice have been given for many years to municipal officers with respect to such matters, but old methods were established from statute labour practice, and had a firm hold on the public mind; and it has been necessary to show and prove, by actual construction and maintenance, the weakness of the methods that have so generally prevailed. Provincial highways are therefore not merely valuable in themselves, but their influence on the remaining roads is of inestimable value to the Province.

During the year construction work was carried out at many points of the Province. In addition extensive maintenance was established over the entire system in an effort to improve those sections which were not to immediately undergo construction in such a manner that they would be in a first-class condition for traffic.

HAMILTON-QUEENSTON PROVINCIAL HIGHWAY
Asphaltic concrete surface, east of Stoney Creek.

A more detailed report of the work done will be found on the following pages. Mention might be made, however, of the following more or less outstanding features of the season's operations.

On the Ottawa-Pembroke Road, south of Cobden, at the southerly end of Muskrat Lake, a fill 4,000 feet long was constructed across the marsh. Six miles of bituminous macadam and $3\frac{3}{4}$ miles of asphaltic concrete surfaces were constructed on the Ottawa-Point Fortune Road. On the Ottawa-Prescott Road five bridges, work on which had been started in 1920, were completed. Easterly from Kingston on the River Road $9\frac{1}{2}$ miles of waterbound macadam were built. Seven miles of macadam were laid from Belleville to Shannonville. Between Oshawa and Belleville over fifty miles of road were gravelled. South of Peterborough 4.3 miles of macadam base were completed. Easterly from

Brantford a concrete pavement was constructed over a length of 5 miles and the pavement through Cainsville and Echo Place was completed. South from London, to Lambeth, a concrete pavement 5 miles long was built. The surfacing of the Hamilton-Queenston Road progressed rapidly with the completion of 11.3 miles of bituminous macadam surface.

Probably the largest single piece of work on the system was that south of Clappison's Corners, where a rock cut through the Niagara escarpment was necessary in order to strengthen the road and eliminate three very sharp, steep turns. At Clappison's Corners the Hamilton-Guelph and the Hamilton-Toronto Provincial Highways intersect, traffic from both roads reaching Hamilton through this cut.

The new entrance of the Toronto and Hamilton Highway (Lake Shore Road), the Dundas Street Provincial Highway, and the Hamilton-Guelph Provincial Highway, which involves the construction of two long and one short bridges, was carried forward. The bridges were practically completed and the grading of the approaches commenced.

These, and many other pieces of work, were continued or completed, and in addition a large mileage of road was graded, culverts constructed and the permanent work necessary before the final surface could be laid was completed. On many miles of the system gravel was applied, and this, followed by a continuous system of patrol maintenance, resulted in a great improvement in the condition of the surface. The policy of developing the surfaces of these roads to a high standard as rapidly as possible has brought about gratifying results.

COUNTY ROADS

A system of county roads has now been established in every county in the Province. There are approximately 49,874 miles of road in the area covered by the County Road System, of which 54.29 per cent. has been surfaced with gravel, broken stone or other more permanent material; a very creditable record for the municipalities.

Since the passing of The Highway Improvement Act, and to the end of 1921, a total of \$36,121,903.97 has been spent on construction and maintenance of county roads, of which the Province has contributed \$15,523,047.84. This includes the county expenditure of 1921, on which the Provincial grant was paid in 1922.

The total length of county road systems at the end of 1921 amounted to 9,610 miles, comprising 1,949 miles of provincial county roads and 7,661 miles of county roads. This is approximately 19.26 per cent. of the total road mileage in the area covered by the County Road System.

The following shows the mileage of the various types of road on the County Road System at the end of 1921:

Gravel roads.....	5,665.0 miles
Water-bound macadam roads.....	1,878.0 "
Bituminous surfaces.....	182.0 "
Bituminous penetration roads.....	94.0 "
Concrete.....	65.0 "
Asphaltic concrete.....	13.5 "
Brick.....	0.5 "
Total.....	7,898.0 miles

This is approximately 82 per cent. of the road mileage under the County Road System.

Expenditure on county roads in 1921 was as follows:

Construction

	Total Expenditure.	Provincial Grant.
Provincial County Roads.....	\$2,783,756 21	\$1,670,253 73
County Roads.....	5,429,335 93	2,171,734 37
Total Construction.....	\$8,213,092 14	\$3,841,988 10

Maintenance

Provincial County Roads.....	\$659,081 71	\$395,449 03
County Roads.....	2,206,114 54	882,445 79
Total Maintenance.....	\$2,865,196 25	\$1,277,894 82

Summary

Total Construction.....	\$8,213,092 14	\$3,841,988 10
Total Maintenance.....	2,865,196 25	1,277,894 82
Total Expenditures.....	\$11,078,288 39	\$5,119,882 92

The work on which the foregoing expenditures for construction were made included the following:

Grading.....	187.38 miles
Gravelled surface.....	218.76 miles
Waterbound macadam.....	302.62 "
Cement concrete.....	30.84 "
Bituminous penetration.....	39.86 "
Asphaltic concrete.....	4.84 "
Total surfaced.....	596.92 miles
Bridges over 10 feet span.....	179
Concrete slab culverts.....	428
Pipe and tile culverts.....	2,099

Among the special features of road improvement effected during the year the following works may be mentioned:

BRANT COUNTY

The Brantford-Oakland Toll road was purchased by the county, towards which the Province contributed 40 per cent. Several timber trestle bridges were replaced with concrete box culverts and earth fills, one fill consisting of approximately 12,000 cubic yards of material, the width of grade being 28 feet. In addition 8 miles of road were graded to the standard width of 28 feet and 57 pipe and 7 concrete box culverts were built.

BRUCE COUNTY

In a series of sections, varying in length from 2 to 4 miles, 21 miles of 16-foot gravel road were built and graded to a width of 28 feet. In addition seventeen bridges, varying in span from 16 to 200 feet with 20-foot roadway, were built; also 22 concrete box culverts and 121 pipe culverts. The work of grading and laying a rubble base through the Eastnor swamp is in progress, and an expenditure of \$22,597.61 was made during the year.

CARLETON COUNTY

Six toll roads in the vicinity of the city of Ottawa were purchased at a cost of \$202,248.13, of which the Province paid 40 per cent. Four miles of 18-foot waterbound macadam, 9 inches deep, were built on Provincial County Road No. 89, known as the Morrisburg road. The work was commenced at the southerly boundary of the county, and is proceeding northerly toward the city of Ottawa and it is expected that in 1922 the work will be linked up with the Ottawa suburban road, thereby providing an excellent and continuous stretch of road for a distance of 26 miles on one of the main highways in the eastern part of the Province. The road is graded to a width of 28 feet and numerous pipe and concrete box culverts were built. A special feature with respect to this work is the elimination of several dangerous corners; this was accomplished by purchasing land for widening and increasing the curvature. On county roads, several stretches of gravel and waterbound macadam roads, varying from

CARLETON COUNTY ROAD

Asphaltic concrete surface 20 feet wide on Metcalfe Road, Ottawa Suburban Roads Commission.

one to four miles in length, and amounting to 26 miles, were built. Nine bridges were built at a cost of \$78,846.36, the most important structures being the Carlsbad Springs bridge, the Steven's Creek bridge, the Kenmore bridge and Burritt's Rapids bridge, consisting of 50-foot, 60-foot, 50 and 72-foot (2 spans) and two 100-foot spans respectively. The bridges are of steel superstructure and concrete substructure.

ELGIN COUNTY

The Silver Creek bridge, 16-foot span and 100 feet wide, was built on County Road No. 42, township of Malahide. Approximately 15,000 cubic yards of earth was used as fill on this bridge. The chief feature, however, is the maintaining of the gravel roads. Excellent results are obtained at a very low cost. Approximately 150 miles of gravel roads were resurfaced during the year.

ESSEX COUNTY

Two sections of 18-foot concrete pavement were built; 1.20 miles westerly from the village of Belle River and 0.70 miles easterly from Pike Creek on Provincial County Road No. 86. On County Road No. 31 an 18-foot concrete pavement one mile in length was built, extending northerly from the limit of the town of Leamington. On Provincial County Road No. 77 a 3-inch tar penetration surface on a 6-inch stone base 18 feet wide and 1 mile long was built through the police village of Harrow. In addition, 40 miles of gravel road were built in stretches varying from $1\frac{1}{2}$ to 9 miles long.

GREY COUNTY

Eight miles of water-bound macadam road, 18 feet wide and 10 inches deep, were built on the Owen Sound-Thornbury road. In connection with this work unusual difficulties arose and it was necessary to reduce many grades, building the road through low-lying land and straightening the road in many places.

ESSEX COUNTY ROAD

Bituminous macadam surface 24 feet wide in the village of Harrow.

In the vicinity of Rock Mills and Priceville, 7 miles of gravel road were built; also 12 miles of gravel road from Hanover to Clifford.

HALDIMAND COUNTY

Over 40 miles of road were graded to the standard width of 26 feet; also the road between Hagersville and Selkirk, 10.5 miles long, was given a 4-inch coat of crushed stone and the travelled surface widened to 14 feet. Three sections of gravel road, 2, 4 and 5 miles in length and totalling 11 miles, were constructed.

HALTON COUNTY

On a section of the Oakville-Georgetown road, 4 miles of 10-foot concrete pavement with 4-foot stone shoulders were built. The road was graded to a width of 28 feet. The county, in a series of sections, constructed, in all, 20 miles of water-bound macadam road 10 to 16 feet wide.

HURON COUNTY

The completion of the Grand Bend bridge over the Aux Sables river between the counties of Huron and Lambton; the building of 10.5 miles of gravel road in sections varying from 2 to 4 miles, graded to a width of 26 feet; and the resurfacing of approximately 180 miles of gravel roads were the main features of the year's work.

KENT COUNTY

On the Wallaceburg-Dresden road the 16-foot concrete pavement commenced in 1920 was extended a distance of $2\frac{1}{2}$ miles on the Wallaceburg end and 2 miles on the Dresden end. It is expected that the remaining 5 miles of this road will be completed in 1922, thereby providing a concrete pavement between the towns of Wallaceburg and Dresden, a distance of 12 miles. On the Dresden-Thamesville road, a 16-foot concrete pavement $2\frac{1}{2}$ miles long was built extending westerly from the C. P. R. North Thamesville station. On County Road No. 8, in the vicinity of Paincourt, a 16-foot concrete pavement, $1\frac{1}{2}$ miles long, was built and linking up with the concrete pavement built by the Chatham Suburban Roads Commission. Approximately 21 miles of tile under-drains were laid during the year. Three bridges were built, consisting of 18, 50 and 70-foot span with 20-foot roadways. In addition, 25 miles of roads were gravelled.

LAMBTON COUNTY

Grade reduction at several points and the building of four bridges varying in span from 20 to 90 feet with 18-foot roadways were completed.

LANARK COUNTY

On the Perth-Lanark road, from Perth northerly to Balderson, $2\frac{1}{2}$ miles of 3-inch tar penetration surface on 8-inch stone base 16 feet wide were built and the road graded to a width of 28 feet. In addition 15 pipe and 12 concrete box culverts were built. On county roads, in a series of sections varying from $1\frac{1}{4}$ to $5\frac{1}{2}$ miles, 14.50 miles of water-bound macadam road were constructed with a width of 12 feet.

LINCOLN COUNTY

Several sections of water-bound macadam road were built, varying in length from 1 mile to $4\frac{1}{2}$ miles and totalling 16 miles. In addition, 3 miles of gravel road were built on the lake road between Port Dalhousie and Niagara-on-the-Lake. Three bridges were built, the chief one being a 54-foot span with a 20-foot road over the Four-mile Creek. Two hundred and sixty-one pipe and 6 concrete box culverts were also built.

LENNOX AND ADDINGTON

One mile of water-bound macadam road, 16 feet wide and 10 inches deep, was built on the Hamburg road. The right-of-way was widened from 40 to 66 feet. Two stretches of water-bound macadam road, $2\frac{1}{2}$ miles at 16 feet wide and 3 miles at 10 feet wide, were built on the Yarker road.

MIDDLESEX COUNTY

Twelve miles of gravel roads were constructed in a series of sections varying in length from $1\frac{1}{2}$ to 4 miles, together with the resurfacing of approximately 125 miles. The Bear Creek bridge in the township of Lobo, having a clear span of 54 feet with a 20-foot roadway, was the chief structure erected during the year.

NORFOLK COUNTY

On the Simcoe-Port Dover road, a 3-inch tar penetration surface on a 6-inch stone base 16 feet wide was built, extending from the limit of Port Dover easterly $3\frac{1}{2}$ miles. This completes this type of road between the towns of Simcoe and Port Dover, a distance of 7 miles. In addition, $1\frac{1}{2}$ miles of a similar road were built in the vicinity of Port Rowan. Four miles of gravel road were built on County Road No. 17, extending westerly from Vanessa station. A 55-foot span bascule bridge with a 16-foot road and 6-foot sidewalk was built over the River Lynn at Port Dover at a cost of \$77,344.66.

UNITED COUNTIES OF PRESCOTT AND RUSSELL

On the Hawkesbury-Vankleek Hill road $5\frac{1}{2}$ miles of 3 inch asphalt penetration surface on 6-inch stone base 16 feet wide were built. On the Vankleek Hill-St. Eugene road, a similar type of road was built, 5 miles long. In a series of sections, 20 miles of water-bound macadam road 16 feet wide were built. In addition, 59 pipe and 31 concrete box culverts were built; also eleven bridges varying in span from 16 to 40 feet with 18-foot roadways.

RENFREW COUNTY

The county, in a series of sections, constructed 46 miles of water-bound macadam and gravel roads 10 to 16 feet wide; also 7 miles of road were graded ready for a stone surface. In addition, 171 pipe culverts were laid and 36 concrete box culverts and 7 bridges built.

SIMCOE COUNTY

Two miles of 3-inch tar penetration surface on 6-inch stone base 18 feet wide were built on the Penetang road, extending southerly from the limit of the town of Penetang. A part of the Orillia-Atherly road was constructed with water-bound macadam 20 feet wide, and given a surface treatment of tar and sand. Thirteen bridges were also built, varying in span from 16 to 60 feet, with 20-foot roadways; the bridges have steel superstructures.

UNITED COUNTIES OF STORMONT, DUNDAS AND GLENGARRY

Sixty miles of water-bound macadam roads were built in a series of sections, varying in length from 1 mile to $6\frac{1}{2}$ miles, and from 10 to 16 feet wide. In addition, 33 concrete box culverts and 4 bridges were built.

VICTORIA COUNTY

The construction of $2\frac{1}{4}$ miles of 16-foot water-bound macadam road 10 inches deep on the Lindsay-Omemee road; grade reductions in several locations, and the elimination of two railway crossings on the Lindsay-Peterborough road were the chief works for the year.

WATERLOO COUNTY

Three and one-half miles of concrete pavement 16 feet wide were built on the Elmira road. It is expected that the remaining 2 miles, together with the section of road within the town of Waterloo, will be completed in 1922, providing a continuous stretch of concrete pavement between the city of Kitchener and the village of Elmira. A further improvement on this road was carried out at St. Jacob's Hill, where the grade was reduced, the road widened and gravelled and a concrete retaining wall and gutter built. A 54-foot span bridge was built on County Road No. 25 at a cost of \$7,600.00.

WELLAND COUNTY

Seven miles of 16-foot water-bound macadam road 10 inches deep were built on the Port Colborne-Marshville road, and the road graded to a width of 28 feet. With this important link constructed, a continuous stretch of hard surface road is provided, extending from Fort Erie in the east to the town of Simcoe in the west. Between Fort Erie and Ridgeway 6 miles of 16-foot tar penetration surface were built; a continuation of the work commenced in 1920. On the Thorold stone road $2\frac{1}{2}$ miles of 3-inch tar penetration surface 16 feet wide were built; also 14 miles of water-bound macadam in a series of sections were built at a width of 10 feet.

GENERAL

The work in the remaining counties consisted chiefly in reshaping and maintaining the existing roads, building permanent structures and otherwise preparing for future work.

SUBURBAN ROADS

A provision is made under the Ontario Highways Act, that a city may co-operate with the county council in improving the leading county roads adjacent to the city and thereby obtain a more substantial type of construction for such suburban roads.

For construction and maintenance of roads which are County Roads the Province contributes 40 per cent. and the County and City each 30 per cent., and on Provincial County Roads, the Province contributes 60 per cent. and the County and City each 20 per cent.

The section of County Road designated as "Suburban" remains a County Road for which the County is responsible; the work of construction and maintenance is carried on under the direction of an engineer appointed by the Commission or may be carried on under the direction of the County Road superintendent, but subject to the instruction of the Commission.

The development of main highways has, in every country, required the co-operation of cities. In the United States, the City of Detroit is paying approximately 87 per cent. of the cost of roads in Wayne County. In New York State, the cities are paying 70 per cent. of the State expenditure.

Under the system of taxation in vogue in the United States, a much larger proportion of the cost of main highways is met by the cities than is provided in Ontario. Provision is made that the rate to be levied upon a city for suburban roads is one-half mill on the dollar, but a city council may by by-law, passed by at least two-thirds of the members present and voting thereon, appropriate

for work on suburban roads a sum not exceeding the proceeds of a rate of two mills on the dollar on the value of the rateable property in the city.

Eighteen cities of the twenty-one within the organized counties of the Province are now paying towards the construction and maintenance of suburban roads. The eighteen commissions appointed have assumed 551 miles of road. The expenditure on suburban roads in 1921 amounted to \$1,822,765.22, of which the cities paid \$484,428.67.

It is anticipated that the three remaining cities, Stratford, Belleville and Woodstock, will co-operate with their counties in the near future in improving the leading county roads adjacent to the cities.

Several of the Suburban Roads Commissions in the Province have done good work during 1921. Some have adopted the principle of building permanent pavements, others again are reshaping, widening and strengthening the existing macadam or gravel roads with the view of laying a permanent surface in the near future. The construction of permanent pavements and structures on suburban roads in the close vicinity of the city should be encouraged by all Suburban Commissions. The Ottawa Suburban Roads Commission has obtained excellent results by adopting the plan of building and preparing for permanent surfaces.

The main features of construction work carried out on Suburban Roads during 1921 are as follows:

TORONTO AND YORK ROADS COMMISSION

The City of Toronto contributes to the entire county road system; the direction of the work, however, is under control of the Commission. Through the towns of Newmarket and Weston, an asphaltic concrete surface 3 inches thick on a 6-inch concrete base and $2\frac{1}{3}$ miles long and 20 feet wide was built. On the Vaughan and Kennedy roads two sections of tar penetration roads 16 feet wide were built. In a series of sections, the Commission constructed 19 miles of water-bound macadam road 16 feet wide and the surface given a treatment of tar and sand. On the Don Mills road, a 90-foot concrete bow-string arch bridge with a 20-foot roadway was built over the Don river. The abutments for the Crousberry bridge were completed at a cost of \$18,226.17. The depth to which the footing had to be carried made this a very difficult and expensive piece of work.

OTTAWA SUBURBAN ROADS COMMISSION

The Commission constructed $12\frac{1}{2}$ miles of water-bound macadam road, 20 feet wide and 7 inches deep, in preparation for a permanent type of surfacing. Nine miles of this work was carried out on the Metcalfe road, one of the most important roads in eastern Ontario. In addition, 30 concrete box culverts and 6 bridges were built, the Saw-Mill Creek bridge being the chief feature. This is a 16-foot concrete arch 70 feet wide and was built at a cost of \$13,393.00. Twenty-one miles of macadam roads were treated with tar and sand.

BRANTFORD SUBURBAN ROADS COMMISSION

On the Burford road, 1.63 miles of concrete pavement 9 feet wide were built, commencing at the limit of the city of Brantford. The concrete pavement was laid on the north side of the road and a 10-foot strip of gravel road laid on the south side adjoining the concrete pavement. This arrangement has given excellent results and permits of a larger mileage of permanent pavement

being built. Extensive grading operations are in progress on the Cockshutt road, where grades are being reduced to a minimum and the road widened to 28 feet.

WINDSOR SUBURBAN ROADS COMMISSION

Three miles of 18-foot concrete pavement were built on Howard avenue; also two miles of grading and gravelling on County Road No. 6. An extensive programme of paving is proposed for 1922.

KINGSTON SUBURBAN ROADS COMMISSION

The chief feature of construction was the building of $2\frac{1}{2}$ miles of water-bound macadam road 16 feet wide on the Finger Board road; also several concrete culverts.

OWEN SOUND COUNTY SUBURBAN ROAD

This surface consists of a central strip of concrete pavement 9 feet wide with two 5-foot macadam shoulders. Total width of roadway 30 feet.

OWEN SOUND SUBURBAN ROADS COMMISSION

Grade reduction and widening in several places and the building of 2 miles of water-bound macadam road 16 feet wide on the Shallow Lake road were the chief points of construction carried out.

CHATHAM SUBURBAN ROADS COMMISSION

On the Chatham-Charing Cross road, 3 miles of concrete pavement 18 feet wide were built, and the road graded to a width of 28 feet. One mile of concrete pavement 16 feet wide was built on the River road west from Chatham.

ST. CATHARINES SUBURBAN ROADS COMMISSION

Two miles of concrete pavement 18 feet wide were built on Niagara street; also $\frac{1}{2}$ mile of asphaltic concrete surface on a stone base 18 feet wide. On the mountain section of the Merritton road, a strip of concrete 1,800 feet long and 9 feet wide with 6-inch concrete curb was built.

KITCHENER SUBURBAN ROADS COMMISSION

From the limit of the city of Kitchener to Bridgeport, $1\frac{1}{4}$ miles of concrete pavement 20 feet wide were built.

NIAGARA FALLS SUBURBAN ROADS COMMISSION

One and one-half miles of 16-foot tar penetration surface on stone base was built on the Thorold stone road.

WELLAND SUBURBAN ROADS COMMISSION

One mile of water-bound macadam road 18 feet wide was built on the Crowland road.

TOWNSHIP ROADS

The total approved expenditure on township roads in 1921 amounted to \$3,465,850.33, and as provided by The Ontario Highways Act, 1920, subsidies amounting to \$708,486.91 were paid, being 20 per cent. of the cost of construction, maintenance, bridges, machinery, etc., and 40 per cent. of the cost of superintendence. This expenditure relates to two hundred and ninety-four townships taking advantage of the aid, being 80 per cent. of the total number eligible for the grant. The expenditure on maintenance amounted to \$1,888,048.75, averaging approximately \$65.00 per mile; road construction, including culverts, cost \$844,829.42.

Apart from the actual financial assistance to the extent of \$708,486.91, the assistance and co-operation of the engineers of the Department have been of untold value to the townships and are having a marked effect upon the nature of township road improvement throughout the Province. In bridge and culvert construction, in the elimination of dangerous curves, brush obstructions, narrow fills, and like matters, the impetus towards prompt action and the advice and guidance in the matter of methods and costs have been found to be sound and worthy of adoption. The construction of culverts 12 and 14 feet long is, in most townships, a practice of the past. The safety, durability and economy of the Departmental type, 24 feet in length, is steadily gaining favour.

The amount of \$501,650.14 was expended during the year on township bridges, the plans and specifications for which were approved by the Department. The structures, for the most part, ranged from 14 to 60 feet in span.

Generally the method of keeping account of road expenditures is far from adequate. The practice of many townships of keeping one general account book in which are entered all receipts and payments, often irrespective of the nature of the entry, creates a serious difficulty at the close of the year, as the township treasurer has the unenviable task of segregating road expenditures and of distributing them to the roads concerned in accordance with the requirements of the regulations of the Department. A standardization of road accounting—a much needed improvement—is likely to be adopted, as it is of vital importance to adequate records of township road work.

Approximately two hundred townships have abolished or commuted statute labour and are systematically improving their roads in such a manner and at such a favourable cost in comparison with those townships where the old system is still in vogue, that the latter are openly discussing the statute labour question and it is likely to be disposed of before many years. An actual ex-

amination of the situation in townships in the counties of Bruce, Huron, Oxford, Perth and Waterloo has shown that roads kept up by the statute labour system are costing between two and three times as much to maintain as roads that are attended to on the basis of paying a fair wage for services rendered.

The appointment of a township road superintendent, so strongly advocated by this Department, has been vindicated in one hundred and fifty townships. In 1921, the expenditure on superintendence amounted to \$76,585.03, of which the Province paid 40 per cent., or \$30,634.01. Some superintendents are handicapped in their duties by a prevailing tendency on the part of the council to leave all road matters in the hands of the councillor representing each division of the township. Also in a number of townships retaining statute labour, there is a division of authority between the pathmaster and the superintendent. Generally, however, these contentious matters are on the wane and the functions of the township road superintendent becoming more definitely solved. Some of them have established patrol systems which are beginning to emulate the best practice in county road work, namely, every mile patrolled.

While there is still room for much improvement in township road systems generally, the work of the year (the second year in which the 20 per cent. subsidy has been operative) has indicated that the municipalities have a clearer conception than before of the relationship between cost and actual results, as well as of the difference between a temporary job and a lasting improvement.

REGISTRATION OF MOTOR CARS

Every motor car used on the roads of the Province is registered in the Motor Vehicles Branch of the Province. This registration includes the name, address and occupation of the owner; a description of the car, comprising make, model, engine and serial numbers, and other particulars. With each registration is issued a permit card, and two number plates, one for the front, the other for the rear of the car. Notice of transfer of ownership must also be filed in the Department. The purposes of this registration with these particulars are important, and relate not merely to the payment of the annual license fee and collection of revenue. Other objects are:

1. Traffic law enforcement; for which the use of number plates on all cars, with an up-to-date list of owners, is essential.
2. Criminal law enforcement; there are few crimes with which motor cars may not be associated, and means of tracing the movement of cars is thus invaluable.
3. The tracing of stolen cars, in which the information regarding engine numbers and the serial number of the car is especially valuable.
4. Finding the owners of cars which have been left on the roadside or elsewhere by joy-riders.

While the information required on the annual application form may seem excessive, the purpose is largely in the interest of car owners, for the protection of their traffic rights, and to aid in the recovery of stolen cars.

MOTOR TRUCKS

The growing use of heavy motor trucks is a matter of much concern to those in charge of the construction and maintenance of roads. While rapidly moving passenger cars, with pneumatic rubber tires, are requiring special treatment of road surfaces—cement concrete, asphalt, tar, oil, calcium chloride, etc.—the heavy motor truck, if unrestricted, is placing an impossible weight and stress on road foundations. When the foundation is shattered or disturbed, the disruption of the surface follows.

Trucks ordinarily carry a little more than their own weight. The present law of the Province permits a gross vehicular load of twelve tons, including the weight of the vehicle and load; so that the present load limitation recognizes what is known as the "five ton truck"—a truck which itself weighs about five tons, and which is commonly loaded with an additional weight of six or seven tons. The registration of trucks for the year shows that there was only one truck in the Province with a carrying capacity of 7 tons; two which had a rated capacity of $6\frac{1}{2}$ tons; ten with a registered capacity of 6 tons; ten carrying 5 tons, and a total of only twenty-three registered, over 5 tons.

Steel tires on motor trucks are wholly prohibited by Ontario law. Resilient tires are required, which permits the use of both solid rubber and pneumatic tires. The later have a cushioned effect which is favourable to the road; solid rubber tires, when used after they are worn or broken, are extremely damaging to the road.

Regulation of motor trucks should tend to a reduction of weight, careful control of speed, the encouragement of pneumatic tires as opposed to solid tires, and a penalty for the use of defective rubber tires.

The numbers of the various classes of motor vehicles, dealers, chauffeurs and garages registered during the year 1921 were as follows:

Passenger Automobiles.....	181,978
Motor Trucks.....	19,554
Motor Cycles.....	4,989
Trailers.....	1,362
Manufacturers and Dealers.....	1,543
Chauffeurs.....	21,808
Garages.....	2,495

REPORT ON PROVINCIAL HIGHWAYS

By the CHIEF ENGINEER

TORONTO, January 30th, 1922.

W. A. McLEAN, ESQ.,
Deputy Minister of Highways, Ontario.

DEAR SIR:

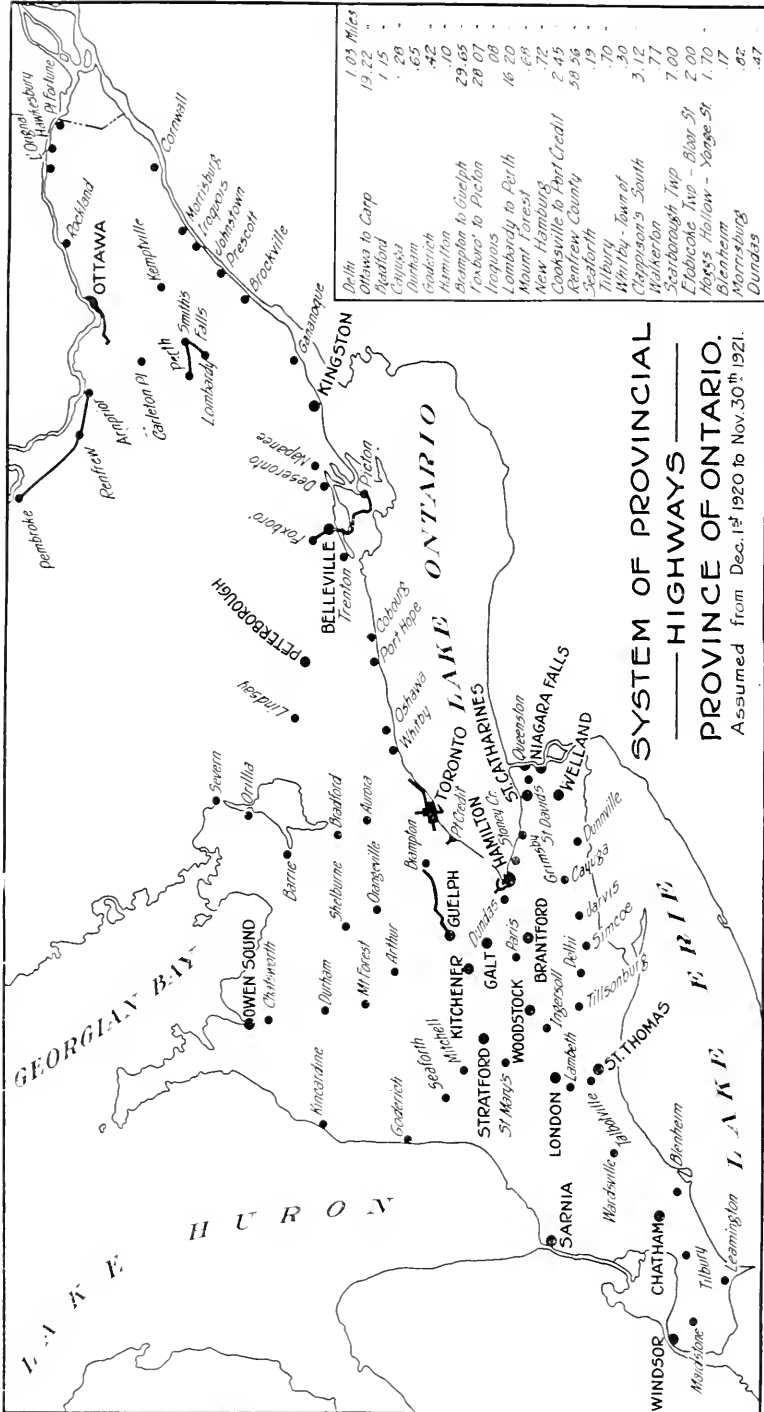

I have the honour to report upon the work of constructing and maintaining the Provincial Highway System in the Counties of Ontario for the year beginning December 1st, 1920, and ending November 30th, 1921.

On December 1st, 1920, the system comprised a total mileage of 1,604.13 miles, as shown on Map No. 1. During the year the system was extended by adding 178.72 miles assumed, less 17.05 miles reverted, as shown on map No. 2, making a total assumed of 1,765.80 miles. A list of the roads added to the system, together with the mileage and date of designations, is as follows:

PROVINCIAL HIGHWAYS ASSUMED IN 1921

County.	Date of Designation.	Municipality.	Mileage.	County Mileage.
Bruce.....	20th of April, 1921.....	Walkerton Town.....	.77	.77
Carleton.....	16th of November, 1921.....	Huntley.....	2.75
	16th of November, 1921.....	March.....	6.15
	16th of November, 1921.....	Nepean.....	10.32	19.22
Dundas.....	16th of December, 1920.....	Morrisburg Village.....	.82
	16th of December, 1920.....	Iroquois Village.....	.08	.90
Grey.....	6th of April, 1921.....	Durham Town.....	.65	.65
Haldimand.....	4th of May, 1921.....	Cayuga.....	.28	.28
Halton.....	4th of May, 1921.....	Esquising.....	9.1
	4th of May, 1921.....	Georgetown Town.....	1.3
	4th of May, 1921.....	Acton Town.....	.50
	4th of May, 1921.....	Nassagaweya.....	2.95	13.85
Hastings.....	18th of May, 1921.....	Thurlow.....	5.7	5.70
Huron.....	16th of December, 1920.....	Seaforth Town.....	.42
	16th of December, 1920.....	Goderich Town.....	.19	.61
Kent.....	16th of December, 1920.....	Tilbury Village.....	.70
	24th of August, 1921.....	Blenheim Village.....	.17	.87
Lanark.....	27th of April, 1921.....	North Elmsley.....	9.68
	27th of April, 1921.....	Drummond.....	1.32	11.00
Leeds.....	27th of April, 1921.....	South Elmsley.....	5.20	5.20
Norfolk.....	20th of July, 1921.....	Delhi Village.....	1.03	1.03
Ontario.....	24th of August, 1921.....	Whitby Town.....	.30	.30
Peel.....	7th of May, 1921.....	Brampton Town.....	.05
	27th of April, 1921.....	Chinguacousy.....	5.10
	16th of March, 1921.....	Toronto.....	2.45	7.60
Perth.....	16th of December, 1920.....	Mitchell Town.....	.48	.48
Prince Edward.....	18th of May, 1921.....	Bloomfield Village.....	1.71
	18th of May, 1921.....	Hallowell.....	7.79
	18th of May, 1921.....	Sophiasburg.....	4.95
	18th of May, 1921.....	Ameliasburg.....	7.77
	18th of May, 1921.....	Bay of Quinte.....	1.15	23.37
Renfrew.....	15th of June, 1921.....	McNab.....	13.14
	15th of June, 1921.....	Horton.....	7.47
	15th of June, 1921.....	Admaston.....	4.01
	15th of June, 1921.....	Ross.....	15.56
	15th of June, 1921.....	Westmeath.....	12.91
	15th of June, 1921.....	Pembroke.....	5.47	58.56
Simcoe.....	18th of May, 1921.....	Bradford Village.....	1.15	1.15
Waterloo.....	27th of April, 1921.....	New Hamburg Village.....	.72	.72
Wellington.....	20th of July, 1921.....	Mount Forest.....	.68
	27th of April, 1921.....	Eramosa.....	6.70
	27th of April, 1921.....	Guelph.....	4.00	11.38
Wentworth.....	12th of January, 1921.....	Hamilton City.....	.10
	12th of January, 1921.....	West Flamboro.....	.88
	12th of January, 1921.....	East Flamboro.....	2.24
	24th of August, 1921.....	Dundas Town.....	.47	3.69
York.....	16th of March, 1921.....	York.....	.30
	16th of March, 1921.....	Etobicoke.....	2.41
	14th of September, 1921.....	York.....	.25
	14th of September, 1921.....	Scarborough.....	6.73
	14th of January, 1921.....	North York.....	1.70	11.39

Total 178.72

The System of Provincial Highways as on November 30th, 1921, and including all roads assumed, is shown on Map No. 3.

Traffic development in the vicinity of all cities had brought such a load on older types of road surfaces that rebuilding and construction of satisfactory pavements was imperative. Plans were therefore prepared for the paving of sections of highway adjacent to cities and requiring urgent attention, so that by the close of the year the cities of Toronto, Hamilton, Ottawa, London, Belleville, Kingston, Sarnia, Windsor, Guelph, Stratford, Brantford and Chatham had each been provided with paved sections of Provincial Highways leading directly away from the end of city pavements.

In localities where stone could be conveniently obtained and where it was advisable to permit settlement of new roadway embankments, a type of road surface adaptable to such work was used and macadam base courses constructed. Upon these base courses, when properly packed by time and traffic, higher types of surfaces may be placed in the future as conditions warrant. In all almost 129 miles of base course was laid.

Gravel roads were maintained by dragging and the application of further light layers of gravel, and under this system about 526 miles were gravelled to provide the necessary material for smoothing out the surface.

The construction of the full width of travelled portion of roadway was proceeded with on portions requiring grading and ditching and this work resulted in the completion of subgrade on 351.41 miles of the system. Many narrow sections of highway were thus widened to full width, making the road safer for vehicular traffic.

A summary of work done in the various counties is as follows:

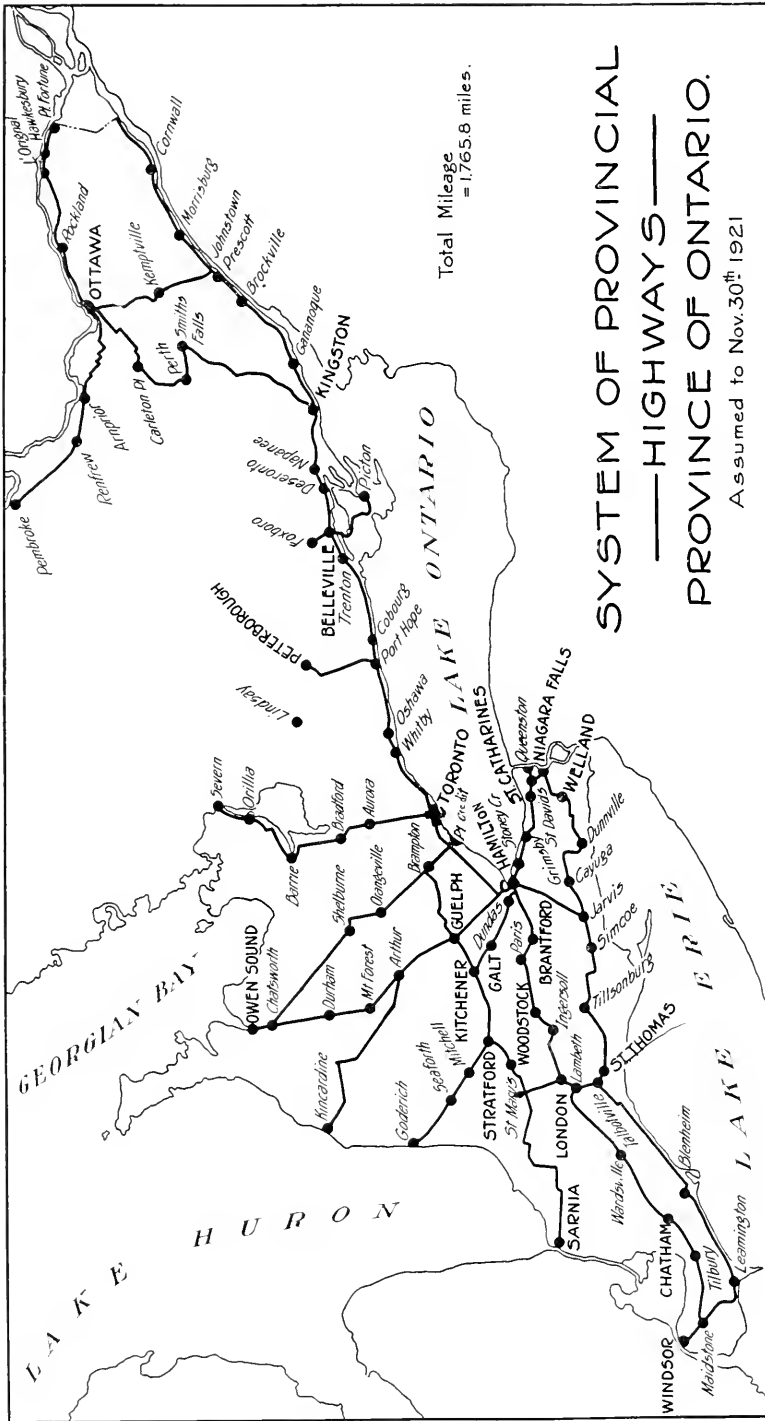

Peel.....	49	11.2	24.2	2.5	5.0	18.0
Perth.....	62	3	11.6	2.1	3.8	2.0	27.8
Peterboro.....	14	4.5	0.5	4.3	5.2	0.0	0.5
Prescott.....	111	4.0	5.0
Prince Edward.....	7.0
Renfrew.....	40	3.3	4.7	0.3
Russell.....	43	10.9	6.0
Simcoe.....	18.3	22.7	13.3	6.5	2.5
Stormont.....	10	7.5	1.9	1.0
Waterloo.....	9	4.8	12.6	1.7

Respectfully submitted,
 GEO. HOGARTH,
Engineer of Highways.

SYSTEM OF PROVINCIAL
 HIGHWAYS
 PROVINCE OF ONTARIO.

Assumed to Nov. 30th 1921

MAP No. 2

REPORT OF DIVISION ENGINEERS, PROVINCIAL HIGHWAYS
EASTERN DIVISION

MR. W. A. McLEAN, M.E.I.C.,
Deputy Minister of Highways.

SIR:—

I beg herewith to transmit a report of the work done on the Provincial Highways in the Eastern Division for the year 1921.

I have the honour to be,

Sir,

Your obedient servant.

(Sgd.) A. A. SMITH.

OTTAWA-PORT FORTUNE HIGHWAY

From Ottawa easterly $3\frac{3}{4}$ miles, a 20 foot asphaltic concrete surface on a two-course water-bound macadam base was laid with standard ditches and entrance culverts and, with the exception of $\frac{1}{4}$ mile at Green's Creek, the remaining $3\frac{1}{2}$ miles into Orleans was ditched and entrances installed. Thirty-four concrete culverts were built, and approximately 12 miles of fences were moved back, completing 95 per cent. of the widening of this section.

From Orleans to Rockland, 9 miles, the bituminous penetration was completed, with the exception of about $\frac{1}{4}$ mile at Cardinal Creek, approximately 3 miles being laid this year. From a point about 1 mile west of Rockland westerly, 6 miles, the grading, ditching and farm entrances were completed and 15 concrete culverts constructed.

The fences on both sides of the road here, and for 1 mile just east of the Cumberland Township line, were moved back to the 86 foot line.

On the provincial highway within the town of Rockland, two concrete culverts were constructed and about 1.5 of a mile of road surfaced with bituminous penetration, and ditched.

East of Rockland, in Clarence Township, 8 miles, 25 concrete culverts were constructed and about eleven miles of fence moved back to the 86 foot line. Also the bituminous penetration surface was continued from a point about $1\frac{1}{4}$ miles east of Rockland easterly 3 miles, graded to standard cross-section and farm entrances installed.

From the Clarence-North Plantagenet town line easterly to the east limits of Hawkesbury, 32 miles, the construction consisted of the building of 64 concrete culverts and one bridge at Wind Creek.

From Hawkesbury easterly, approximately 6 miles, fences on both sides of the road were moved back, and with the exception of $\frac{6}{10}$ of a mile east from Little Rideau River bridge, grading and ditching was completed and farm entrances installed.

From Bradford's Creek bridge westerly $1\frac{1}{4}$ miles the highway was fenced on both sides.

From the town of Hawkesbury easterly to the Quebec boundary, 46 concrete culverts were built.

General maintenance was carried on during the season over the whole highway from Ottawa to Pt. Fortune.

OTTAWA-PEMBROKE HIGHWAY

From Ottawa city limits to the C.P.R. crossing at Britannia, approximately $4\frac{1}{2}$ miles, the right-of-way was cleared and graded to standard cross-section, side entrance culverts installed and 12 concrete culverts built. A rubble foundation 6 inches deep and 20 feet wide was laid for a distance of $2\frac{1}{2}$ miles from Ottawa westerly, and $\frac{1}{2}$ mile of macadam roadway, 10 inches deep and 20 feet wide, constructed from the Richmond road westerly. Five miles of fence was taken down and 3 miles erected on the new limits of the right-of-way.

From the C.P.R. crossing at Britannia north-westerly $27\frac{3}{4}$ miles to Antrim, very little construction was carried out. Four-tenths of a mile at Carp and 1 mile from Marathon easterly along the Huntley-Fitzroy town line and south in Huntley Township was graded to standard and side entrances installed. The

OTTAWA-PEMBROKE PROVINCIAL HIGHWAY
View of Carillon Rapids on Ottawa River from Provincial Highway.

above grading was given a coat of gravel, 6 inches deep and 14 feet wide, and between Carp and Antrim 19 concrete culverts were built.

From Antrim to Arnprior, approximately 7 miles, the road was graded and ditched to standard cross-section, side entrance culverts installed, 11 concrete culverts built and the whole stretch given a 14 foot surface of gravel 6 inches deep. The old fence for a length of 2.8 miles was moved back to the new alignment.

West of Arnprior, for a distance of $\frac{1}{3}$ mile, the road was graded, farm entrances installed and a 5 inch water-bound macadam base, 20 feet wide, laid. The highway was graded through the cross road, Concession VII, McNab Township, for a distance of one mile and covered with a 6 inch coat of gravel 14 feet wide. Forty concrete culverts were built in McNab Township, and $5\frac{1}{3}$ miles of fencing erected.

From the McNab-Horton town line to Cobden, no construction was carried out except in the marsh south of Cobden, where a fill 30 feet wide for a distance of 4,000 feet was made and gravelled. From Cobden westerly $3\frac{1}{4}$ miles, the road was given a 4 inch coat of gravel 9 feet wide.

General patrol maintenance was carried on over the whole road.

OTTAWA-PRESCOTT HIGHWAY

The macadam surface was completed from Prescott to the G.T.R. crossing north of Johnstown by the construction of a base course, 8 inches deep and 20 feet wide, from the railway crossing southerly 1.4 miles. One-half mile from Prescott to Wexford was treated with tar. The guard rail at the G.T.R. level crossing, north of Johnstown, was moved back, the crossing improved and

OTTAWA-PRESCOTT PROVINCIAL HIGHWAY

Asphaltic concrete surface passing Dominion Experimental Farm, south of Ottawa.

the bridge at Johnstown completed. General maintenance was carried out over this area and over the gravel section north to Spencerville.

From Spencerville northerly to Bedell, 14 miles, the 20 foot gravel surface was renewed, and 12 culverts built.

Over the entire area from Prescott to the Rideau, scattered fencing and grading was done, and 51 miles of trees were planted.

In Edwardsburg Township, the widening was practically completed and in Oxford Township about 90 per cent. completed. As soon as the culverts were constructed, these points were graded, thereby completing the grading of the entire section except the approaches to the C.P.R. overhead crossing near Kemptville.

From the Rideau River northerly to the North Gower Township line, 1.8 miles, a gravel surface 20 feet wide was laid, and $\frac{1}{5}$ mile graded. From the

town line northerly to North Gower Village, approximately 6 miles, the macadam base course was completed by the construction of 4.9 miles, 6 inches deep, 20 feet wide. Stephen's Creek bridge, started in 1920, was completed, and the road surface through the village of North Gower was oiled. The grading and widening from the Rideau River to North Gower Village was practically completed.

From North Gower Village to Hog's Back the grading was completed, about $\frac{1}{2}$ mile being done at Phalin's Hill and Stephen's Creek bridge in North Gower Township and $\frac{1}{5}$ mile at Black Rapids in Nepean Township. Three bridges at Watterson's Corners, Carsonby and North Gower, and two culverts, and two bridges at Jock River and Manotick, which were started in 1920, were completed.

One mile of cobble base was laid at Phalin's Hill and over this and northerly for a total distance of approximately 4 miles, gravelling 20 feet wide was done, joining up with the 20 foot gravel surface running south from Manotick. Through the village of Manotick the surface was oiled. Between the Jock River and Johnson's Hill, gravel was placed to give a 20 foot gravel surface from Manotick southerly to Merivale side road. From this point northerly to the junction of the Ottawa-Kingston road at Hog's Back, $5\frac{3}{4}$ miles, the macadam base course 6 inches deep and 20 feet wide was completed by the construction of 2.8 miles northerly from the Merivale side road. The fencing from North Gower Village to Hog's Back was about 90 per cent. completed. The grading was completed, 14 miles of trees planted and 7,513 feet of guard rail erected.

From Hog's Back to Ottawa, four culverts were built, completing the concrete work in this section.

From Johnston to Hog's Back the concrete work, grading and a macadam or gravel surface has been completed and the fencing over 90 per cent. complete. From Hog's Back to Ottawa construction was held up pending settlement with land owners.

The whole of the Ottawa-Prescott highway received continuous general maintenance by patrols.

JOHNSTOWN-QUEBEC BOUNDARY HIGHWAY

From the junction of the Ottawa-Prescott highway at Johnstown easterly 5.3 miles, to the beginning of the Dominion Government Canal road, a macadam base, 5 inches deep and 20 feet wide, was laid, except $\frac{1}{2}$ mile at Woodland's Quarry. The first $3\frac{1}{2}$ miles were oiled and the grading of the whole area completed by the construction of $1\frac{1}{2}$ miles of standard ditches at the east end of this section. From this point into Cardinal Village, $\frac{4}{5}$ of a mile, no work was done, this being Dominion Government Canal road.

In the east limits of the Village of Cardinal, $\frac{1}{3}$ of a mile of heavy grading was done; and $1\frac{1}{5}$ miles of macadam, 7 inches deep and 20 feet wide, was laid east of the village, completing the macadam surface from Cardinal to Iroquois, except those sections which are Dominion Government Canal road.

From the east limits of Iroquois easterly $3\frac{1}{4}$ miles to the proposed diversion at Flagg's Creek, a 5 inch water-bound macadam base, 14 feet wide, was laid and 2 concrete culverts constructed. The grading of the whole section from Iroquois to Morrisburg, except $\frac{1}{5}$ mile at the proposed Flagg's Creek diversion and one mile of Dominion Government Canal road in the east limits of Matilda Township, was completed, approximately $2\frac{1}{2}$ miles being done during the 1921 season. The new macadam east of Iroquois, $3\frac{1}{4}$ miles, and about $1\frac{3}{4}$ miles of the macadam built in 1920, west of Iroquois, was treated with tar.

From Morrisburg Village easterly to the Williamsburg-Osnabruck town line, about 7 miles, 2 miles of heavy grading and ditching, with standard entrance

culverts, was carried out. This work was in scattered sections and included grade reductions and backfilling over culverts; seven concrete culverts having been completed in this area during the season.

From the town line easterly to Farran's Point, $3\frac{1}{2}$ miles, approximately 1.8 miles of grading and ditching with standard farm entrances was done, and directly east of Farran's Point the same work was carried out for about $1\frac{1}{2}$ miles. Through Aultsville and Farran's Point, $2\frac{1}{2}$ miles of surface was treated with 50 per cent. asphaltic road oil and between Farran's Point and Dickenson's Landing, one concrete culvert was built.

East of Dickenson's Landing to the town line, the road was graded and ditched for a distance of 1.6 miles. This was given a 5 inch coat of gravel 20 feet wide to complete the gravel surface from Dickenson's Landing to Moulinette. Nine concrete culverts were constructed in this area.

Through the villages of Moulinette and Mille Roche the surface was treated with 50 per cent. asphaltic road oil.

From Maple Grove easterly $\frac{4}{10}$ of a mile of ditching and $\frac{7}{10}$ of a mile of macadam construction completed the grading, and a 2 course macadam roadway, 12 inches deep and 20 feet wide, to the west limits of Cornwall Town—approximately $3\frac{1}{4}$ miles was constructed. This surface was twice treated with tar during the season.

In the east end of Cornwall, $\frac{1}{4}$ of a mile of road was covered with a 10 foot strip of gravel 5 inches deep, and east of the town the highway was ditched for approximately 1 mile, completing the grading of the $2\frac{1}{4}$ mile macadam surface to the Cornwall-Charlottenburg town line. This macadam surface was treated with 50 per cent. asphaltic road oil.

Through Charlottenburg Township, $12\frac{1}{4}$ miles, scattered grading, surfacing, and culvert construction as follows was carried out.

From Lancaster Village easterly, 9 miles, to the Quebec boundary, the highway was graded to standard cross-section and side entrances installed. The 16 foot macadam base, which in 1920 was completed as far as the Bainsville side road, was this year extended easterly 2 miles, and from this point to the Provincial boundary, a 12 foot strip was laid. Five concrete culverts were constructed and 30 off-take ditches dug from the highway to Lake St. Francis. Three-quarters of a mile of road between Lancaster and South Lancaster was treated with tar.

GENERAL:

Continuous maintenance was carried on over the whole highway from Johnstown to the Quebec boundary wherever construction operations permitted.

Other construction as follows was done during the season:

EDWARDSBURG TWP.

Fencing—5.5 miles.

Tree planting—835 trees.

MATILDA TWP.

Fencing—0.7 miles.

Tree planting—235 trees.

WILLIAMSBURG TWP.

Fencing—40 rods.

Field stone piled—6,861 c.y.

OSNABRUCK TWP.

Fencing—3 miles.
 Tree planting—298 trees.
 Field stone piled—12,475 c.y.

CORNWALL TWP.

Fencing—1.5 miles.
 Tree planting—73 trees.
 Field stone piled—9,195 c.y.

CHARLOTTENBURG TWP.

Fencing—8.0 miles.
 Tree planting—183 trees.
 Field stone piled—8,000 c.y.

LANCASTER TWP.

Fencing—7.35 miles.
 Tree planting—340 trees.

KINGSTON-PRESCOTT HIGHWAY

From Barriefield easterly to the Fingerboard, approximately $9\frac{1}{2}$ miles, a two-course water-bound macadam roadway, 8 inches deep and 20 feet wide, was constructed with standard ditches and farm entrances, and the first three miles east of Barriefield treated with tar. Five miles of the old fences were moved back to the 86 foot line, four miles of trees were planted, and 9 culverts were built.

From the Fingerboard to Gananoque, general patrol maintenance was carried out. Commencing at a point approximately 1 mile west of Pittsburg-Leeds Township line westerly $\frac{3}{4}$ of a mile, and from the township line easterly for a distance of 2 miles, a macadam base, 8 inches deep and 20 feet wide, was constructed. On the 2 miles east of the township the ditching was completed and trees planted and on the whole section from Barriefield to Gananoque about 16 miles of poles were moved.

Easterly from Gananoque through Leeds, Lansdowne and Escott townships to the Yonge Township boundary, approximately 18 miles, general maintenance was carried on. In Lansdowne Township, $4\frac{1}{2}$ miles of poles were moved and $\frac{1}{2}$ mile of trees planted. In Escott Township one culvert was constructed, one mile of fence moved back, $4\frac{1}{2}$ miles of trees planted and $4\frac{1}{2}$ miles of poles moved.

In Yonge Township, besides general macadam maintenance, 18 culverts were constructed, and two bridges, at Jones Creek and Michael Henry Creek, were completed. From Yonge's Mills easterly $2\frac{1}{2}$ miles heavy grading was completed, farm entrances installed, trees planted, and $\frac{1}{2}$ mile of macadam base, 4 inches deep and 10 feet wide, was constructed. Throughout the whole township, 6 miles of poles were moved off the highway entirely and 1 mile of new fence constructed.

From Yonge Township east boundary, easterly 1 mile, a macadam base course, 4 inches deep and 20 feet wide, was laid, and from Brockville easterly 4 miles, a bituminous penetration surface on a 5 inch water-bound macadam base was constructed. From Yonge township line to Brockville, the grading, ditching, farm entrances, fencing, tree-planting and pole-moving were completed.

From Brockville easterly, approximately $2\frac{1}{2}$ miles of macadam base, 6 inches deep and 20 feet wide, was laid, grading completed, farm entrances installed, and trees planted. The highway was widened to 86 feet from Brockville to Maitland, a distance of 3.7 miles. From this point easterly to Prescott, approximately 7 miles, 22 concrete culverts were built, $1\frac{1}{2}$ miles of old fence moved to the new line, 3 miles of grading and ditching done, and $\frac{1}{3}$ mile of macadam base 20 feet wide in the village of Maitland were constructed.

General maintenance was carried out over the whole road.

BELLEVILLE-KINGSTON HIGHWAY

From Belleville to Shannonville, a distance of 7 miles, a two-course, water-bound macadam roadway 20 feet wide was completed with standard ditches and farm entrances. Six concrete culverts were constructed in Thurlow Township, and about $4\frac{1}{2}$ miles were treated with tar. Five and three-quarter miles of the highway were widened to 86 feet.

The rock cut and bridge at Shannonville, which were started in 1920, were completed and the diversion opened to traffic.

From Shannonville to Marysville bridge the road was ditched and graded and standard entrance culverts installed. This newly graded section was immediately given a heavy coat of gravel 10 feet wide over the entire length, including the Shannonville diversion.

Marysville bridge, which was started in 1920, was completed and opened to traffic.

General patrol maintenance was carried out over the entire stretch of gravel road from Shannonville to the Slash road about $1\frac{1}{4}$ miles south of Marysville, a distance of $7\frac{3}{4}$ miles.

From the Slash road southerly 1.7 miles an 8 inch macadam base 20 feet wide was laid over the heavy grading done the previous year. From this point into Deseronto, 3.3 miles, maintenance was carried out and three concrete culverts were constructed, thereby completing the culverts on this section.

From Deseronto to Napanee, $3\frac{1}{2}$ miles of macadam base 20 feet wide were constructed, linking up with the macadam previously laid from Napanee westerly and completing a macadam surface from Deseronto to Napanee, a distance of $5\frac{1}{4}$ miles. The stone for this work had been quarried from Napanee Hill and piled by the road during the previous winter. The construction of $\frac{1}{2}$ mile of ditching completed the ditching of this section. The finished road from Napanee westerly 1.7 miles was treated with tar and general maintenance was carried on over the whole section.

Napanee Hill cut was completed, and a two-course water-bound macadam roadway laid through it.

From the east end of the cut easterly 5 miles to Lund's Quarry, the macadam surface was patched and treated with tar and general maintenance was carried on. Kayler's bridge was completed and opened to traffic.

The rock fill over the large culvert just east of the quarry was brought up to grade and a macadam surface laid over it. The 1.7 miles of macadam west of Odessa was treated with tar, two miles of the highway widened to 86 feet, and $1\frac{3}{4}$ miles of trees planted.

From Nigger Hill (Kingston Township boundary) easterly $7\frac{3}{4}$ miles to Kingston, the macadam surface was treated with tar and general maintenance carried on by a patrol. A short length of ditching and tiling was done just west

of Kingston and $1\frac{3}{4}$ miles of highway widened to 86 feet, mainly between Kingston and Catarauqui.

Over the entire road continuous maintenance was carried out.

OSHAWA-BELLEVILLE HIGHWAY

From Oshawa to Port Hope, approximately $28\frac{1}{2}$ miles, gravelling 20 feet wide was carried out with the exception of about 1 mile in the town of Bowmanville, on which asphaltic concrete was laid. Of this 0.7 mile was laid by the town of Bowmanville, and the remainder by the Department. Thirteen concrete culverts were constructed, approximately $6\frac{1}{2}$ miles of scattered ditching completed, farm entrances installed and fourteen and a half miles widened to 86 feet. Some 2,000 feet of guard rail was erected at Roseberry and Rowes hills and about 20 miles of trees planted throughout the section. From Oshawa to Harmony the gravel road was treated with asphaltic oil road.

From Port Hope to Belleville is approximately $50\frac{1}{2}$ miles. Of this $4\frac{1}{3}$ miles within the larger towns is not Provincial Highway. On the highway,

PORT HOPE-BELLEVILLE PROVINCIAL HIGHWAY
Gravel surface east of Colborne.

scattered gravelling was done where necessary, $25\frac{1}{2}$ miles being covered with a 4 inch coat, 20 feet wide. At various points throughout this area a total of $23\frac{1}{2}$ miles of road was widened to 86 feet, 10 miles of grading and ditching with farm entrances done, 2 miles of poles moved, 15 miles of trees planted, 11 culverts built and 3,115 feet of storm sewers laid.

Patrol maintenance was carried on over the whole road from Oshawa to Belleville.

BELLEVILLE-PICTON HIGHWAY

From Belleville southerly, approximately 6 miles, the surface was given a light coat of gravel.

From Mountain View to Pearsall's bridge the surface was maintained with broken stone. Three miles from Pearsall's bridge southerly, the macadam built the previous year by the County was given surface treatment with tar.

From Bloomfield to Picton the surface was maintained with gravel.

Considerable repairs were made to the floor of Belleville Bay bridge and over the whole road continuous patrol maintenance was carried on.

BELLEVILLE-FOXBORO HIGHWAY

From Belleville northerly for 3 miles the road was ditched and graded to standard cross-section and the necessary farm entrances installed. Two miles of this fresh grading was covered with a macadam base course, 20 feet wide, and, from Foxboro Village southerly one mile the old macadam surface was treated with tar. Over the whole length of the road, 15 concrete culverts were constructed during the season.

PORT HOPE-PETERBORO HIGHWAY

The road was graded and ditched, standard entrances installed and a 6 inch gravel surface, 20 feet wide, placed on the following sections:

- (a) Port Hope northerly—1.3 miles.
- (b) Hope-Hamilton town line— $1\frac{1}{4}$ miles.
- (c) South of Baileyboro—1.3 mile.
- (d) Between Centreville and Fraserville—approximately 2 miles.

TORONTO-PORT HOPE PROVINCIAL HIGHWAY
Gravel surface between Cobourg and Port Hope.

- (e) North and south of Kendry railway crossing—2 miles.
- (f) From Scott's Corners north-easterly— $2\frac{2}{5}$ miles.

From Peterboro south-westerly, 4.3 miles, a 6 inch water-bound macadam base 20 feet wide was laid with standard ditches and side entrances complete.

Over the whole road 54 concrete culverts were built and 1-1,5 miles of fence moved back to the 86 foot line.

General maintenance, consisting of patching, dragging, weed-cutting, cleaning ditches and culverts and removing snow, was carried on continuously over the whole road by a patrol gang.

OTTAWA-KINGSTON HIGHWAY

From a point about 3 miles east of Ashton, easterly for 1 mile, the road was graded, standard entrances installed, and a cobble base 18 feet wide with a gravel surface laid. Eleven concrete culverts were built in Goulburn Township, and the whole road from Ottawa to Ashton was cleared of weeds and brush, and the surface kept in repair by patching and dragging.

From Ashton to Ashton Station, 1.5 miles, the road was graded, standard entrances installed, a macadam surface laid, 5 concrete culverts built, and the right-of-way widened to 86 feet.

From Ashton Station to Perth the right-of-way was cleared of weeds and brush, and the surface maintained by patching and dragging. At Boyd's Corners, a diversion, 1700 feet long, to improve the alignment, was graded and 4 concrete culverts built.

From Perth to Smith's Falls is $11\frac{1}{4}$ miles. From Perth south-easterly, $2\frac{3}{4}$ miles of road was cleared and widened to 86 feet, and, south-east of Port Elmsley, three-quarters of a mile of penetration surface was completed. Maintenance of this section required heavy patching with tar.

From Smith's Falls to Morton, $30\frac{3}{4}$ miles, heavy maintenance was carried on, a temporary 18-inch tile culvert was placed across the road in the swamp just west of Portland, and $\frac{1}{2}$ mile of road ditched at this point. Scattered sections in this area were given a 3 inch coat of gravel 10 feet wide as follows:

- (a) Lombardy north-easterly $2\frac{1}{4}$ miles.
- (b) Between Lombardy and the Kitley—S. Elmsley town line— $\frac{1}{2}$ mile.
- (c) At New Boyne— $\frac{1}{2}$ mile.
- (d) North-east of Portland—1 mile.
- (e) Through the swamp south-west of Portland—2 miles.
- (f) Seven and a half miles north-east of Elgin— $\frac{1}{2}$ mile.
- (g) Elgin— $1\frac{1}{3}$ mile.

From Morton to Joyceville, $24\frac{1}{2}$ miles, 48 concrete culverts were constructed and heavy maintenance carried on. Three scattered sections as follows were given a gravel surface 10 feet wide and 3 inches deep.

- (a) West of the Lyndhurst road— $\frac{1}{2}$ mile.
- (b) From $2\frac{1}{2}$ miles west of Seeley's Bay westerly—1 mile.
- (c) From 5 miles west of Seeley's Bay westerly— $\frac{1}{2}$ mile.

From Joyceville westerly 6 miles no construction work was undertaken, but continuous maintenance was carried on. From this point to Barriefield, 26 concrete culverts were constructed and the road patched with broken stone.

TORONTO-OSHAWA HIGHWAY

From Toronto to West Hill, approximately $8\frac{1}{2}$ miles, general macadam maintenance was carried out, the section from the G.T.R. crossing to West Hill being twice treated with tar during the season.

From West Hill easterly 1.4 miles of road were gravelled and from the eastern end of the proposed Highland Creek diversion easterly, approximately $1\frac{1}{2}$ miles, to the Pickering Township line was graded, five concrete culverts constructed and about $\frac{1}{2}$ mile of the highway widened to 86 feet.

From the township boundary to Dunbarton, about 3 miles, the macadam base 6 inches deep and 22 feet wide was completed, and two concrete culverts constructed in the vicinity of the Rouge. From the end of this macadam easterly $3\frac{1}{2}$ miles of asphaltic concrete surface 22 feet wide on a 9 inch water-bound macadam base were constructed, linking up with the asphaltic concrete laid in 1920 from Dunbarton to Pickering Village.

From Pickering Village to Whitby Township boundary, approximately $3\frac{1}{2}$ miles, the 6 inch macadam base, 22 feet wide, was completed and this whole

section treated with tar. Trees were planted along the road within Pickering Township; five miles of the highway were widened to 86 feet and about 1,200 feet of guard rail erected.

From the west limits of West Whitby to Oshawa, except about a mile in Whitby Town, a 6 inch water-bound macadam base, 22 feet wide, with standard ditches and farm entrances, was completed. On the mile in Whitby Town, mentioned above, 0.6 mile was constructed by the Town, and the remainder by the Department.

WESTERN DIVISION.

MR. W. A. McLEAN, M.E.I.C.,

Deputy Minister of Highways.

SIR:—

I beg herewith to transmit a report of the work done on the Provincial Highways in the Western Division for the year 1921.

I have the honour to be,

Sir,

Your obedient servant,

(Sgd.) G. F. HANNING.

HAMILTON-LONDON PROVINCIAL HIGHWAY

Steam shovel excavating for subway under Toronto-Hamilton and Brantford Railway.

HAMILTON-LONDON HIGHWAY

Between Hamilton and Brantford fencing, grading and concrete culverts were completed with the exception of about six miles of fencing in Ancaster Township and 3.10 miles of grading at Binkley's subway. A macadam base

22 feet wide was constructed easterly from the Ancaster quarry 1.2 miles, to connect with the bituminous pavement constructed the previous year, and a second base course 5 inches thick and about 1.9 miles in length was laid in Ancaster village. The existing macadam base, 10 feet wide and 5 miles in length, west of Ancaster was widened to 22 feet and a new macadam base 22 feet wide was constructed westerly from the end of this macadam to the Brant-Wentworth county line.

For a distance of five miles from the Brant-Wentworth county line to Cainsville a 20 foot concrete pavement was constructed. This pavement connects with a stretch of about one-quarter of a mile of similar pavement which was laid the previous year.

From Cainsville to the easterly limits of the city of Brantford a 30 foot concrete pavement with curb and gutter and storm sewers which was commenced in 1920 was completed. The tracks of the Brantford Municipal Railway between the easterly limits of Brantford and the Mohawk Park entrance were moved to the south side of the road to provide clearance for the 30 foot pavement.

HAMILTON-LONDON PROVINCIAL HIGHWAY

Gravel surface and standard concrete culverts near Paris.

About three miles west of Brantford grading and fencing was done by day labour during the winter months over about 1/5 of a mile. The existing gravel road was maintained by dragging and patching. Culverts were cleaned out and oil applied to about four miles of road.

Between Paris and Woodstock 6.9 miles of road was graded and brought to standard cross-section, which completed the grading on this section. Twenty-six culverts were built and the right-of-way was widened to 86 feet for 3.7 miles westerly from Paris and for short distances at three other points between Paris and Woodstock, totalling in all about 6.5 miles of widening. A coat of gravel was applied from Paris westerly for a distance of 11 miles. Two and one-quarter miles of macadam was laid through swampy ground in the vicinity of Eastwood, linking up with the old macadam road which extends easterly from Woodstock a distance of 3 miles. This old macadam road was scarified and rolled. Trees were prepared for planting in Burford and Blenheim Townships.

Between Woodstock and Ingersoll 1/10 of a mile of heavy grading was done and 10 concrete culverts constructed. Three and a half miles of road was lightly gravelled.

Between Ingersoll and London 18 concrete culverts were constructed. The road was graded and brought to standard cross-section from Ingersoll and Thamesford, a distance of 4.8 miles. This includes 1/10 of a mile of heavy grading at Thamesford. From Ingersoll westerly for a distance of 2½ miles, the right-of-way was widened to 86 feet. The Thamesford bridge was completed and opened to traffic.

Four-tenths of a mile of gravel asphalt was laid in Thamesford village and a second coat of gravel was applied over the remainder of the road between Ingersoll and London, approximately 15.4 miles. Four hundred lineal feet of guard rail was erected.

Patrol maintenance was carried on over the entire road, including dragging and patching and cleaning of ditches and culverts. The injurious effects of springs in the roadway were overcome by undertiling. Some 250 yards of road was undertiled for this reason.

LONDON-ST. THOMAS PROVINCIAL HIGHWAY
Concrete pavement constructed during 1921.

LONDON-ST. THOMAS HIGHWAY

From the City of London southerly to the southerly limits of Lambeth Village, a distance of 5½ miles, grading and culverts were completed and a concrete pavement 20 feet wide constructed. Two thousand two hundred lineal feet of storm sewer was laid by day labour and 14 catch basins constructed. From Lambeth to St. Thomas, a distance of 9½ miles, the road was gravelled. One hundred and thirty-two lineal feet of guard rail was erected.

Weeds were cut and the road kept in repair by dragging and patching. One mile of road in Lambeth village was treated with oil.

LAMBETH-MAIDSTONE HIGHWAY

The road was graded and brought to standard cross-section and a concrete pavement constructed for a distance of 1,011 lineal feet westerly from Lambeth.

From the end of this concrete to Wardsville, a distance of approximately 31 miles, is a gravel road. Scattered construction work was done on this section during the 1921 season. About ¾ of a mile was graded and brought to standard cross-section just east of Delaware village and the approaches to Delaware

bridge and those to the bridge $1\frac{1}{2}$ miles west of Melbourne were widened. From the end of the concrete at Lambeth to the easterly limits of Christina village, a distance of 11 miles, the road was resurfaced with gravel; from the westerly limits of Christina village westerly $1\frac{1}{2}$ miles, and from 2 miles west of Melbourne westerly to Wardsville, 13 miles. Weeds were cut and guard rail repaired. About $1\frac{1}{2}$ miles of road in Melbourne village was treated with oil. The road was dragged and patched where necessary over the whole of this section.

From Wardsville to the city of Chatham, a distance of approximately 29 miles, was for the most part a sand and clay road, with gravel in Wardsville village and westerly $5\frac{1}{2}$ miles; easterly from Thamesville 1.4 miles, and easterly from the east limit of Camden Township $1\frac{1}{2}$ miles. Some nine stretches of road varying in length from $\frac{1}{2}$ mile to 2.3 miles were graded to standard cross-section. This includes 0.7 miles of grading for concrete pavement east of Chatham. Nineteen culverts were constructed and about 0.4 miles of fence moved back to the 86-foot line on the north side of the road in Zone Township. The road was newly gravelled through Wardsville village and westerly for a total distance of 6.7 miles, from Thamesville easterly 1.7 miles, from Thamesville westerly 1.4 miles, and from the westerly limits of Camden Township, easterly 1.5 miles. Construction of the concrete pavement, extending easterly from Chatham 2 miles, was started at the easterly end and completed for a distance of 3,600 lineal feet towards Chatham. Patrol maintenance was carried on over the whole of this section. The road was dragged and patched where necessary. Weeds were cut, and culverts and bridges repaired.

From the city of Chatham to Maidstone, a distance of approximately 40 miles, was practically all clay road with the exception of about 3 miles of gravel in Maidstone township. The road was graded to standard cross-section in Tilbury town and westerly, a distance of $\frac{3}{4}$ miles, and for a length of about $\frac{1}{2}$ of a mile, 2 miles east of Tilbury. The fences on the north side of the road were moved back to the 86 foot line over this half mile. Ten concrete culverts were constructed, $\frac{3}{4}$ mile of concrete pavement was laid in Tilbury town and westerly. The road was gravelled from Tilbury town easterly 1 mile, from Big Creek to the town line of Tilbury north and Tilbury west, a distance of 2 miles; from the village of Comber westerly to the village of Woodslee, a distance of $9\frac{1}{2}$ miles, and from Maidstone easterly 3 miles.

The department paid a part share of the cost of construction of the Tracey drain in Rochester township.

The road was dragged and patched, weeds were cut and general maintenance carried on over the whole section.

ST. THOMAS-WINDSOR HIGHWAY

The road was gravelled from Talbotville to Shedden, a distance of $6\frac{1}{2}$ miles. The rest of the road in Southwold and Dunwich townships was a fair gravel road. Heavy grading was commenced with a steam shovel in Dunwich township but was not completed. The road in Aldborough township was in very poor condition, being very light sand with $\frac{1}{2}$ mile gravelled. Two steam shovels were used for heavy grading and the entire stretch of $10\frac{1}{2}$ miles was graded to standard cross-section and surfaced with gravel. Forty-one culverts were built. A gravel hoist was erected on the lake shore as no pit gravel was available.

With the exception of gravelling, practically no construction work was undertaken between the westerly limit of Aldborough township, which is the

boundary between Kent and Elgin counties, and the village of Wheatley, a distance of approximately 50 miles, as the surface was gravel and in very good condition. Sections of the road were surfaced with gravel as follows: From Clearville westerly 1.8 miles; 2 miles through Palmyra and westerly; east of Morpeth, 1 mile; Morpeth westerly, 4.8 miles; easterly from Blenheim, 3 miles; westerly from Blenheim, $14\frac{1}{2}$ miles; east and west of Coatsworth side-road, a total distance of 3.4 miles; and easterly from Wheatley about 2 miles.

From Wheatley to Leamington, a distance of 6.7 miles, the road was graded to standard cross-section, a light coat of gravel applied, and seven concrete culverts were built. The road was gravelled from Leamington to Essex, a distance of 14.8 miles, and from Essex westerly 7 miles to the Pere Marquette railway crossing at Oldcastle. The old fence between lot 288 Maidstone township and the Sandwich south town line was taken down and moved back and a portion re-erected on the new right-of-way line.

A concrete pavement was constructed from Oldcastle westerly 2.7 miles. Part of the grading was done on this section. From the end of this concrete pavement to Windsor, a distance of 4 miles, the road was graded to standard cross-section. This includes the new grade across the Neal farm cut off. New fences were erected on the 86 foot line across the Neal farm. Twelve culverts were constructed between Oldcastle and Windsor.

General maintenance was carried on over the entire road. The surface was dragged and patched, weeds were cut and culverts were cleaned and repaired.

NIAGARA FALLS-ST. THOMAS HIGHWAY

The road between Niagara Falls and Welland, a distance of approximately $12\frac{1}{2}$ miles, is an old macadam road. Thirteen concrete culverts were built on the section, the road was graded to standard cross-section for four miles northerly from Welland and surfaced with stone to a width of from 10 to 16 feet, from Welland northerly and easterly $11\frac{1}{2}$ miles. Sixty-one concrete culverts were constructed between Welland and Dunnville.

From Dunnville westerly the road was graded to standard cross-section for a distance of 8.8 miles. Thirty-five culverts were built between Dunnville and Cayuga, and a macadam road was constructed from Dunnville westerly 9 miles, and from Cayuga easterly two miles. This completes the grading, culverts and macadam between Dunnville and Cayuga. From Cayuga to the east limit of Walpole township, a distance of 5.8 miles, is an old macadam road. A clay road extends through Walpole township, a distance of 6.6 miles, with about 1.2 miles of old macadam extending easterly from Jarvis which connects with a concrete pavement in the village of Jarvis. Thirty-six culverts were constructed between Cayuga and Jarvis and the road was graded to standard cross-section from Jarvis easterly four miles.

From Jarvis to Tillsonburg is for the most part a sand and clay road with stretches of gravel in Delhi and Courtland villages and westerly from Courtland $2\frac{1}{2}$ miles. Extending easterly from Tillsonburg is about $\frac{1}{2}$ mile of gravel, $\frac{1}{2}$ mile of tar macadam and $\frac{1}{2}$ mile of macadam base. Four concrete culverts were built in Walpole township just west of the village of Jarvis. The road was graded to standard cross-section from Jarvis westerly 1 mile, from Black Creek easterly 1.2 miles and westerly 3 miles including about 1.3 miles of heavy grading. A gap of $\frac{3}{10}$ of a mile was left at Black Creek. About 3 miles of grading was done easterly from Courtland village.

A coat of gravel was applied to the newly graded sections east and west of

Black Creek and east of Courtland and also from Delhi easterly 1 mile and from Simcoe westerly 7 miles. Some 1913 rods of fencing was done.

Between Tillsonburg and St. Thomas two culverts were constructed. One-half of a mile of heavy grading was done at Springer Hill in Bayham township, and grading was commenced in Yarmouth township, but not completed. Gravel was applied to the fresh grade at Springer Hill and easterly from St. Thomas 8 miles. The right-of-way was widened to 86 feet for a distance of 0.3 miles at Springer Hill and 2,412 lineal feet of guard rail was erected.

General patrol maintenance was carried on over the entire road. The road was dragged and patched, and washouts and culverts repaired. Weeds were cut and ditches cleaned. The old macadam road extending 1 mile westerly from Aylmer and also from the Moulton-Wainfleet township line easterly for 8 miles was oiled.

HAMILTON-JARVIS HIGHWAY

This is an old macadam road throughout, approximately 25 miles, excluding those portions in the towns of Caledonia and Hagersville. The road was graded to standard cross-section from Hamilton southerly 3.8 miles, and a macadam base constructed over the same distance. Seventy culverts were constructed, which practically completes the culverts on this section.

The road was patched with stone. Ditches were cleaned, weeds cut and bridges repaired. The road was treated with oil between Mount Hope and North Glanford, a distance of 2 miles.

HAMILTON-QUEENSTON HIGHWAY

Grading and culverts were completed between Hamilton and Grimsby. The road was gravelled from Hamilton city-limits easterly to the junction of

HAMILTON-QUEENSTON PROVINCIAL HIGHWAY

A scenic stretch of road at Jordan.

HAMILTON-QUEENSTON PROVINCIAL HIGHWAY

View from Provincial Highway looking up 20-mile Creek at Jordan.

the Stoney Creek road at mile 5. A waterbound macadam base was constructed from mile 5 to Winona, a distance of 4 miles, and a bituminous macadam surface, which was commenced in 1920, was completed from Winona to Grimsby with the exception of about $\frac{1}{2}$ mile where a macadam base was constructed. The tracks of the Hamilton, Grimsby and Beamsville Electric Railway at mile 5 were moved to a new location to provide a better crossing of the road, and two level crossings were eliminated west of Grimsby by the relocation of one mile of track on the south side of the road. Some 180 rods of fencing was done in Saltfleet Township.

Between Grimsby and Beamsville two concrete culverts were constructed and the road was graded to standard cross-section from Beamsville westerly $\frac{3}{4}$ mile, completing the grading on this section. A macadam base was constructed easterly from Grimsby to Grimsby Park road, a distance of 1.3 miles and westerly from Beamsville $\frac{3}{4}$ mile.

A bituminous macadam surface was constructed from Grimsby Park road to Beamsville, a distance of 3 miles with the exception of about 0.4 miles at the "Thirty Mile" Creek.

Between Beamsville and St. Catharines six concrete culverts were constructed. The road was graded to standard cross-section at the "Fifteen" and "Sixteen" Mile Creeks where some heavy cutting was made. This completes the grading between Beamsville and St. Catharines with the exception of a short stretch where a diversion is to be constructed at Jordan Corner, in order to improve the turn at this point. One-third of a mile of bituminous surface was constructed easterly from Beamsville, which provides an improved surface from Beamsville to Vineland, a distance of $3\frac{1}{2}$ miles. Between Jordan and St. Catharines a macadam base was completed, about 3.2 miles being constructed this season, and a bituminous surface was constructed over the whole distance, approximately 5.3 miles. This provides an improved surface between Beamsville and St. Catharines with the exception of the short stretch at Jordan. Three thousand four hundred lineal feet of guard rail was erected between Beamsville and St. Cath-

arines at fills requiring same, and 450 rods of fence was moved back. Trees were planted over three miles of right-of-way in Louth Township.

From Homer to St. David's, a length of approximately 4 miles, a macadam base was constructed and seven concrete culverts were built. Sixty-six lineal feet of guard rail were erected and 2 miles of trees were planted.

The entire road was under patrol maintenance, the sections having a macadam surface receiving, in addition to the regular maintenance, two applications of oil.

ST. DAVID'S-NIAGARA FALLS HIGHWAY

Ditches were constructed at St. David's corner and heavy grading was done on the St. David's ravine hill to the Stamford-Niagara line. The grades were reduced and the road widened. Eleven concrete culverts were built. A macadam base was constructed from St. David's to Niagara Falls, a distance of about 4 miles, with the exception of about $\frac{1}{2}$ mile at the St. David's ravine hill where the heavy grading was done, and about $\frac{1}{4}$ of a mile in Stamford village which was paved with concrete before the road was taken over by the Department.

The road was patched and oiled, small sections of concrete pavement repaired, and ditches and culverts cleaned.

NORTHERN DIVISION.

MR. W. A. McLEAN, M.E.I.C.,
Deputy Minister of Highways.

SIR:—

I beg herewith to transmit a report of the work done on the Provincial Highways in the Northern Division for the year 1921.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) R. M. SMITH.

TORONTO-SEVERN HIGHWAY

The Toronto suburban area extends northerly along Yonge street to the Holland river. In York township no construction was done in 1921, the road was maintained, however, by placing stone on the edges of the present pavement where traffic had undermined and broken away the existing surface. Holes in the pavement were patched with stone and tar. The whole was then treated with tar and a cover of $\frac{3}{8}$ inch stone. Minor repairs were made to bridges and culverts. Surveys were made in the township, including the proposed site for the high level bridge across the Don Valley.

Through the townships of Markham and Vaughan maintenance of a similar nature was done. Stone was shipped in and piled for patching.

In the townships of King and Whitechurch, from Eagle street, Newmarket, to township boundary, approximately $\frac{5}{8}$ of a mile, bituminous macadam

TORONTO-SEVERN PROVINCIAL HIGHWAY

View of Lake Couchiching from Provincial Highway north of Orillia.

surface was completed. Side entrances were completed by day labour. From South Town Line to Aurora the road was kept in shape by maintenance patrols.

Between the north boundary of King and Whitechurch townships to the top of Holland Landing hill, 1.95 miles, tar penetration pavement was completed under contract, the grading and side entrances being done by day labour. Stone 4 inches deep was applied on the Holland Landing hill.

Between King Township line and the Holland River crushed stone was placed for a base course over a distance of about $\frac{1}{2}$ mile. This work was continued from Holland River to Bradford.

From a point about $1\frac{1}{2}$ miles north of Bradford to the north boundary of West Gwillimbury township, a distance of $5\frac{1}{2}$ miles, macadam base was laid. Grading was done and side entrances installed throughout this section. Eighteen culverts were built. Considerable maintenance was required on the old gravel road adjacent to this new macadam to keep it in shape for the heavy traffic. Through the township of Innisfil 20 culverts were built. The road had been in very rough condition and required a considerable quantity of gravelling to put it in good shape. Ditches were opened up, and several tile entrances installed to prevent washing out of the road.

At Barrie the province has assumed 0.4 miles inside the town limits at the south entrance and 1.6 miles at the north entrance. At the south entrance one culvert was built and at the north 1.9 miles of grading was completed, and this grade received an application of gravel. Three culverts were also built within the north town limits. From Barrie limits to Crown Hill 1.7 miles were graded to standard section and then gravelled. In Oro Township grading was done from concession 10 to the north town line, a distance of 6.3 miles. This included one bad hill where grade was reduced from ten per cent. to seven per cent. Eleven culverts were constructed within this section and gravel applied. Gravel was also applied on the old road in concessions 2 to 6 and some entrance tile installed where grading was completed.

In the township of South Orillia, from south boundary 2.2 miles north, the grade was reduced on numerous small hills and the road gravelled. From Orillia Asylum entrance to the Barrie road, a distance of nearly 1 mile, a diversion was

constructed in order to provide a better approach to the town. The diversion being on low ground, two light coats of gravel were placed on this new grade.

Between Orillia and the north boundary of the township 0.7 miles were graded by day labour. Field stone was crushed and a macadam road built. Eighteen culverts were built in the township of South Orillia. From the south town line, township of North Orillia, to village of Ardtrea, 1.8 miles, were graded to standard section. Field stone was crushed and a macadam road built on this section. From Ardtrea to Washago the stone road was kept dragged and patched where necessary with 1 inch stone and screenings. North of Washago rock grading was done for a distance of 0.2 miles and the old macadam road maintained by gravel application to the Severn River.

BRAMPTON-STRATFORD HIGHWAY

From Brampton to Georgetown, a distance of 8.0 miles, the highway was gravelled and kept in good shape by dragging, making a great improvement in the surface. Some light ditching was also carried out to assist drainage. The road from Georgetown to Acton has not been assumed, due to the fact that several diversions are contemplated for work in 1922, but maintenance was carried out from Acton to the eastern limits of Guelph township. From this point to Guelph city, a distance of $2\frac{3}{4}$ miles, the road was graded a short distance immediately east of the city limits and loose stone was laid on approximately $1\frac{1}{2}$ miles and the remainder of this section was gravelled.

Westerly from Guelph the road was gravelled in stretches where the surface required such treatment. Continuing westerly to Breslau, the highway was lightly gravelled and reshaped and between Breslau and Kitchener, approximately three miles were resurfaced with gravel. Practically all the necessary culverts were constructed from Guelph to Kitchener, preparatory for the grading operations planned for next season.

From Kitchener westerly maintenance by dragging and patching with gravel was carried out. The section of the road through the villages of Baden and New Hamburg were maintained by applications of asphalt and tar. Light grading and ditching was done in several localities, and from a point about $3\frac{1}{2}$ miles east of Stratford to the city limits the road was gravelled, right-of-way cleared of brush, and roadbed widened on the dangerous sections, making a marked improvement in the approach to the city.

HAMILTON-CHATSWORTH HIGHWAY

The three high-level bridges at the Hamilton entrance were completed and the grading for the approaches to these bridges undertaken. Good progress was made on the large rock cut at Clappison's Corners. A macadam base was constructed from Clappison's Corners north 3 miles and the road was gravelled from the end of this macadam to the village of Puslinch. The culverts on this section were practically completed. In the township of Puslinch the road was maintained by re-surfacing and patching with gravel for a distance of 5 miles. The stretches of road through the villages of Puslinch, Morriston and Aberfoyle were oiled. The road was graded and surfaced with concrete pavement for a distance of 3.6 miles immediately south of the city of Guelph, culverts constructed and standard ditches built. A storm drainage system of approximately 5,000 feet was also installed on the Ontario Agricultural College hill.

HAMILTON-GUELPH PROVINCIAL HIGHWAY
Cement concrete surface 20 feet wide, south of Guelph.

Northerly from Guelph, the road was gravelled a distance of 11 miles to the village of Fergus, and the road kept in good condition by dragging. About 1 mile north of Fergus the road was graded and ditched a distance of 2 miles, and again for a distance of 2 miles immediately north of the Peel-Nichol boundary. The section from Arthur south 3 miles was graded and ditched and $2\frac{1}{2}$ miles of this piece was lightly surfaced with crushed stone. Through the township of Arthur the road was surveyed. About $1\frac{1}{2}$ miles in this township was gravelled and the remainder kept in good shape by dragging and patching with gravel. Midway between Mount Forest and Durham, at the long swamp, grading was completed and the right-of-way widened to 86 feet. About $1\frac{1}{2}$ miles of the road was gravelled and the surface kept in good repair by dragging and patching. The approach to the town of Durham was gravelled, and north of the town the road was also gravelled and ditched for a short distance. North of Durham, through the townships of Bentinck and Glenelg, the road was kept in good shape by dragging and patching with gravel. Thirteen culverts were constructed and a steel bridge erected over the river Styx. Through the village of Dornoch the road was ditched and approximately 600 feet of storm drain installed. General maintenance was kept throughout. A dangerous curve south of Chatsworth was eased and the road through the village was patched with gravel and then oiled.

STRATFORD-GODERICH HIGHWAY

From Stratford westerly, 3.82 miles of asphaltic concrete pavement were constructed. From the end of this pavement westerly, a distance of two miles, a macadam base was laid and surface treated with tar. From this point to Mitchell the road was scarified and reshaped. A new steel bridge at Sebringville, 60 ft. span, replaced the old wooden structure at this point, and at Whirl Creek the old steel structure was also replaced by a new 70 foot steel span.

West of Mitchell the road received a light coat of gravel, and this type of maintenance was continued as far as Holmesville. In the town of Seaforth some ditching was carried out, side entrance culverts installed and gravel applied. Some widening was also done by day labour, in short stretches where the highway was narrow and dangerous or where drainage was poor. Heavy grading was done between Holmesville and Taylor's Corners, a distance of 3.69 miles. All the culverts between Stratford and Goderich were completed.

STRATFORD-LONDON HIGHWAY

During the season 1921, the road received a 3 inch coat of gravel from Stratford south-westerly a distance of 9.6 miles. On this section, some $3\frac{1}{2}$ miles was graded and ditched. Westerly from St. Mary's, the road was also gravelled, and grading and ditching was done from the north-east corner of London township to Elginfield, a distance of 6 miles.

Southerly from Elginfield, short stretches of the road were graded and ditched and generally maintained by patching with gravel. The suburban area of London extends northerly from that city a distance of $5\frac{1}{4}$ miles. On this section of road, ditches were laid out and grades set preparatory to the ditching widening of the roadbed. From the Thames River, northerly to the middle concession IV, side ditches were constructed and the roadbed widened. Two light coats of gravel were applied from the city line to a point near St. Johns. Some work was also done on the abutments for the proposed new bridge over the Thames River at London. Most of the culverts were constructed between London and St. Johns, also between Elginfield and St. Marys, and one bridge of 50 feet span with 24 foot roadway over Fish Creek.

ELGINFIELD-SARNIA HIGHWAY

From Elginfield westerly for about 3.0 miles the road was graded and ditched. From Ailsa Craig westerly to Arkona very little construction was done. About $1\frac{1}{2}$ miles of the highway was gravelled in the township of E. Williams and a further 6.0 miles gravelled in the township of W. Williams. Passing into the county of Lambton at the Aux Sables River, culvert construction was undertaken and all structures completed to the village of Arkona, preparatory to 1922 grading.

Through the township of Warwick, a distance of approximately 14 miles, the road received a light gravel application. About $2\frac{1}{2}$ miles in Plympton township was graded and ditched and 11 miles gravelled.

From the east boundary of Sarnia township, the highway received a light coat of gravel. Westerly for $2\frac{1}{2}$ miles from the Sarnia city limits, a concrete pavement was constructed. The pavement is 18 feet wide with 6 foot gravel shoulders on each side. Side ditches were opened and culverts constructed. The work done on this section of road has greatly improved the approach to the city. On the above section practically all culverts were completed between Elginfield and Arkona.

TORONTO-HAMILTON HIGHWAY

(Via Dundas St.)

Commencing at junction of Bloor Street and Mossom Road, grading was completed as far west as Dundas Street, a distance of 2.0 miles. Culverts were also constructed and one concrete bridge, 50 foot span, with 24 foot roadway, was constructed over Mimico Creek. Westerly to Summerville, the bituminous concrete surface was repaired by patching. The road was graded and surfaced (concrete base with asphaltic top) from Summerville to Cooksville, a distance of 3 miles.

From Cooksville westerly for $3\frac{1}{4}$ of a mile the grading and ditching was done, and an asphaltic concrete pavement on 5 inch concrete base continued. Between Cooksville and 16-Mile Creek the road was generally maintained and 42 culverts built. The bridge at 16-Mile Creek was completed and opened for traffic. Grading was completed from 16-Mile Creek westerly to Clappison's Corners, and all necessary culverts constructed. A 5 inch macadam base was laid from the eastern boundary of Nelson township to the east side of Nelson Mountain Cut.

Westerly through the township of E. Flamboro to Clappison's Corners, a distance of $3\frac{3}{4}$ miles, the grading was completed. Culverts were also constructed across the township, and a macadam base laid through Waterdown village and westerly one mile towards Clappison's Corners.

From Clappison's Corners the highway runs south-easterly along the boundary between E. and W. Flamboro townships, a distance of approximately 1.6 miles, where it forks, one route running south-westerly into Hamilton, and the other easterly to connect with the Toronto-Hamilton highway. These roads, together with the three high-level bridges which were completed in 1921, are known as the Hamilton Entrance Scheme. Good progress was made with the large rock cut at Clappison's and grading and approaches to these bridges. The necessary culverts were also completed. Some grading was done in preparation for the surfacing contemplated for next year's programme.

HAMILTON-KITCHENER HIGHWAY

The suburban area of the city of Hamilton extends from Dundas Forks (Binkley's Corners) to Christie's Corners (excluding the town of Dundas), a distance of 4.5 miles. During the season of 1921, in Ancaster township between Binkley's Hollow and Dundas, a large culvert 12 feet by 8 feet by 161 feet was started and the Hollow was surfaced with crushed stone. Approximately 3.0 miles of ditching was done and two concrete culverts were constructed in Flamboro village.

Commencing at the top of Dundas Mountain, an asphaltic concrete pavement was laid on a macadam base for a distance of 4.75 miles westerly. Dundas Mountain was also macadamized for a distance of 3,550 feet.

Between the eastern boundary of Beverley township and the village of Rockton, 2.5 miles of road was graded and standard ditches constructed. The macadam base was completed to Rockton village. Seven concrete culverts were built in Beverley township, and the road was oiled through the villages of Rockton and Sheffield. South of Galt a macadam base was laid a distance of 2.6 miles to connect up with that already laid in 1920. The road was widened from toll

HAMILTON-KITCHENER PROVINCIAL HIGHWAY
Asphaltic concrete pavement 20 feet wide south of Galt.

gate to Elgin Street, and a 20 foot macadam base constructed, and from the toll gate to Little's Corners one mile of standard ditch was constructed.

From Galt to Preston only maintenance was undertaken.

Between Preston and Kitchener, 3 miles of the road was graded and widened to 30 feet in preparation for the concrete pavement which is proposed to be built next year.

PORT CREDIT-OWEN SOUND HIGHWAY

Grading was completed between Port Credit and Cooksville, culverts were also built on this section and a macadam base was constructed. This section was built to connect the Toronto and Hamilton highway with Dundas Street.

From Cooksville to Brampton only light maintenance was undertaken, but nearly all culverts were completed to allow for continuation of grading and macadam base in 1922.

Grading was carried on for a distance of 2 miles north from Brampton. Gravel was also placed on this new surface and a light maintenance coat continued through to Orangeville, making this a first-class gravel road.

North of Orangeville, grading was completed to the hamlet of Camilla, a distance of $8\frac{1}{2}$ miles. Culverts were also completed on this section, which was later gravelled. From Camilla to Shelburne dragging was done, but no construction was undertaken. Commencing at Shelburne, a light coat of gravel was applied through to Flesherton, Markdale and Chatsworth, and later to Owen Sound.

ARTHUR-KINCARDINE HIGHWAY

From the intersection of this road with the Guelph-Owen Sound highway, the road was graded westerly for about $\frac{3}{4}$ of a mile and a macadam base constructed. The greater part of the highway between Arthur and Harriston was lightly gravelled and some light grading done where necessary. Westerly from Harriston for four miles the road was gravelled. Gravel was also applied

through the village of Clifford and westerly for two miles. One mile of heavy grading was done between Clifford and Mildmay and the road through Mildmay received a light coat of gravel. From Mildmay to Walkerton general maintenance was carried out and the road patched with gravel where required. The road was gravelled for a distance of 2 miles on either side of the Brant-Greenock township boundary, a short stretch of heavy grading was done a few miles west of Walkerton, and 2 steel bridges erected over the branches of the Teeswater River, one of 30 feet span and the other a semi-through truss of two spans, each 75 feet long. Eight culverts were constructed between Walkerton and Kincardine, preparatory to grading in 1923, and twelve miles of the highway east of Kincardine was lightly gravelled.

ONTARIO PROVINCIAL HIGHWAY

Applying Calcium Chloride on Gravel Surface as a dust preventative.

REPORT ON COUNTY AND TOWNSHIP ROADS

By DISTRICT ENGINEERS

TORONTO, June 21st, 1922.

W. A. McLEAN, ESQ.,
Deputy Minister of Highways, Ontario.

SIR:

I have the honour to submit a report on work carried out on the County and Township roads in the Counties of York and Peel.

Yours respectfully,

ARTHUR SEDGWICK,
District Engineer of Municipal Roads.

YORK COUNTY

On the Sutton Road in East Gwillimbury, and between Sutton and Jackson's Point and westerly on the baseline in North Gwillimbury, 4 miles of waterbound macadam was built. This work also received a surface treatment of tar. The macadam varied from 16 to 18 feet in width and from $7\frac{1}{2}$ to 10 inches in depth. The total cost was \$66,500.16. Between Queensville and Belhaven, and from lot 7 to lot 20 in Georgina, 4 miles of heavy gravelling was distributed at a cost of \$16,000.60. The abutments for the Crousberry bridge over the Black River in Georgina township were completed at a cost of \$18,226.17. The depth to which the footings had to be carried made this a very difficult and expensive piece of work. The superstructure is being built in 1922.

In Newmarket, 3,578 feet of asphaltic concrete pavement was completed on a base which was commenced the year previous. On the Kennedy road $1\frac{1}{4}$ miles of bituminous macadam pavement 20 feet wide was built, south from the C. N. R. crossing in Con. C, Scarboro, at a cost of \$38,416.04. Two and one-half miles of waterbound macadam with tar surface were built north of Unionville, and another three-quarters of a mile was built on the Whitechurch-Markham townline. One and a quarter miles of gravelling was also done on this road in Markham and Whitechurch townships. On the Vaughan road, seven-eighths of a mile of 20-foot bituminous macadam pavement was constructed between Mulberry and Oakwood streets at a cost of \$23,495.88. Between lots 1 and 5 in King township, 6,600 feet of waterbound macadam with tar surface was built at a cost of \$33,465.15. In addition to the above, a foundation course was commenced in Vaughan township preparatory to building a bituminous macadam pavement in 1922. On the Weston road about one mile of asphaltic concrete pavement 20 feet wide was constructed at a cost of \$49,000 per mile, and in the village of Woodbridge 3,049 feet of 18-foot bituminous macadam was built at a cost of \$29,800 per mile. Adjoining the south end of this, 2,300 feet of waterbound macadam with tar surface was built. In King Township, a half-mile of gravelling was done. On the Don Mills road, 3,633 feet of 20-foot asphaltic concrete pavement was built through the Todmorden district at a cost of \$44,700 per mile, and a 90-foot span, 20-foot roadway, concrete bowstring arch bridge was constructed over the Don River at a cost of \$25,000. On the Langstaff road, 3 miles of waterbound macadam was built east of Markham. On Road No. 10, $2\frac{1}{4}$ miles of macadam and gravel road was built. On the Mt. Albert road 3 miles of grading and nearly 2 miles of gravelling was done, and on the Pine Orchard road 1 mile of gravelling was done. On the Lloydtown road four miles of heavy grading and gravelling was done between Aurora and Schomberg at a cost of \$17,500, and a further stretch of nearly one mile of gravelling was put on east of Aurora. On the Lansing road, $1\frac{1}{2}$ miles of waterbound macadam was built west from the Kennedy road. On Road No. 18, one-half mile of waterbound macadam was built north from Long Branch.

The above is a brief resume of the chief work carried out on the county roads during 1921. The total expenditure amounted to \$671,671.30, of which some \$60,000 was expended for general maintenance.

The experiences of the last two or three years compels one to conclude that in the southern area of the county the density of the traffic radiating from Toronto necessitates the very best and strongest type of construction, and the area embracing this heavy traffic is steadily expanding. The congestion will probably only be partially and temporarily relieved when the Provincial Highways reach their full efficiency. The county authorities are recognizing this condition by rebuilding the ordinary macadam roads with asphaltic concrete and bituminous macadam. On the northern lateral roads good gravel and waterbound macadam roads will be the most economical type to build for some years to come.

Township Work

With the exception of King, all the townships participated in Government aid for township work. In the north, where gravel is available, considerable improvement is made in the local roads with comparatively small expenditure. In the townships surrounding the city of Toronto there is an extensive urban area with comparatively low assessments. In this area large expenditures are necessary to keep the roads from becoming impassable during the spring and fall seasons.

PEEL COUNTY

With the exception of the Brampton sideroad, Peel County roads are subjected to traffic which is more purely local. Road improvement is, therefore, spread around in shorter stretches than would otherwise be required. Construction work consisted chiefly of stone and gravel surfacing and was distributed over the various townships as follows: Caledon, $1\frac{3}{4}$ miles; Toronto Gore, 2 3-8 miles, and Toronto township, $14\frac{1}{2}$ miles. Toronto township had a large unexpended balance from the preceding years, which accounts for the larger programme carried out in that township during 1921. The total expenditure amounted to \$131,727.28, including some \$30,000 for maintenance work.

Township Work

All the townships availed themselves of the usual Government aid for township road work. Toronto township did a large amount of grading work in addition to a moderate amount of gravel and stone surfacing.

TORONTO, January 30th, 1922.

W. A. McLEAN, Esq.,

Deputy Minister of Highways, Ontario.

SIR:

I hereby beg to submit a summary report of the county and township road work as carried out in the counties of Elgin, Essex, Kent, Lambton and Middlesex and the townships therein under the Highway Improvement Act and the Ontario Highways Act.

It is gratifying to note on county work in this district that the spreading of gravel is receiving more attention. Experience has shown that a thin layer of new gravel spread two or three inches thick over the old surface and carefully dragged produces a surface that is smooth and permits a larger mileage to be resurfaced. Numerous gravel pits have been purchased by all the counties. All five counties are operating motor trucks for gravel distribution.

PELEE ISLAND TOWNSHIP ROAD
Gravel surface sixteen feet wide.

ESSEX COUNTY ROAD

Bituminous macadam surface 18 feet wide on the "Pike Road," east of Amherstburg.

It is gratifying to find the townships taking up the matter of township aid. In 1920, 16 townships out of a total of 57 participated, while in 1921, 50 townships participated, and the probability in 1922 is that 55 out of the 57 will be participating. The improvement of the sideroads and concession roads is a live issue in all municipal councils.

With regard to statute labour, 35 townships have abolished or commuted statute labour in this district and 22 still retain statute labour. Since the inauguration of Government aid to townships in the year 1920, 20 out of the above 35 townships abolished or commuted statute labour.

Numerous visits were paid throughout the season to the township, officials where matters of special importance were considered.

Labour conditions for 1922 look to be very promising, and in those counties of Kent and Essex considerable reduction in concrete pavement prices seem to be evident.

Respectfully submitted,

J. A. P. MARSHALL,

District Engineer of Municipal Roads.

ESSEX COUNTY

Essex County during 1921 spent over \$511,000.00 on the County Road System. To the end of 1921, since the county first entered the system, the expenditure has amounted to \$1,182,954.78, on which the county received a grant of over \$524,000.00.

During the year Essex County constructed about 6 miles of concrete roads at the following locations:

- (1) Leamington, No. 31, 4,900 lin. feet. (Day labour.)
- (2) Howard Ave., No. 4, 16,720 lin. feet. (Suburban Roads.)
- (3) Maidstone, No. 86, 5,700 lin. feet. Contract.
- (4) Belle River, No. 86, 2,900 lin. feet. Contract.
- (5) Pike Creek easterly No. 86, 3,700 lin. feet. Contract.

It was hoped that some improvement would have been done on the River Road between Amherstburg and Windsor, but the matter will probably be given first consideration in 1922.

The work in Harrow consisted of a bituminous macadam pavement which was completed with the exception of the seal coat, which will be done early in 1922.

Considerable gravelling was done and it is giving splendid results. This gravel is shipped from the Hickey pit at Leamington to the various railway points within the county and then teamed to the particular locality. About 40 miles of new gravelling was done during 1921, while about 20 miles were resurfaced. In addition to the loading and shipping sufficient gravel for the county roads, the Department of Public Highways and various local municipalities were supplied with over 300 cars of gravel. With regard to bridges and culverts, 5 bridges

of 12 to 18-foot spans were constructed and 12 reinforced concrete culverts from 4 to 9-foot spans.

Work on the Windsor Suburban Roads consisted of the building of Howard Avenue concrete roadway as outlined above. Three concrete culverts were built on Road No. 1 in Sandwich West and 2 miles of grading and gravelling on Road No. 6 from Walker Road easterly.

The following table shows the mileage of the various types of road at the end of 1921.

Type	Provincial Highway Miles	Provincial County Miles	County Miles	Township Miles	Total Miles
Earth.....	12.41	45.50	89.32	589.25	736.48
Gravel.....	44.42	5.00	107.25	287.50	444.17
Stone.....	5.50	4.50	8.00	18.00
Bit. Macadam.....	2.00	0.50	2.50
Concrete.....	2.75	6.50	8.38	6.00	23.63
Total.....	59.58	64.50	209.95	890.75	1,224.78

Percentage of roads surfaced—39.86%.

Township Work

The following townships in Essex County took up the matter of Township Aid: Anderdon, Colchester South, Gosfield South, Maidstone, Mersea, Rochester, Sandwich East, Tilbury North and Pelee Island. Of these, Colchester South, Gosfield South, Maidstone, Rochester and Sandwich East have township road superintendents; Mersea and Anderdon still retain statute labour. The approved expenditure made by the above townships on township work for 1921 amounted to approximately \$64,000.00. Special mention should be made of the organization and work as carried out in South Gosfield township. The following townships will probably take up the matter of township aid in 1922: Malden, Colchester North, Gosfield South, Tilbury West.

ELGIN COUNTY

A systematic maintenance of gravel roads has been carried out during 1921 in Elgin County. During the year approximately 150 miles of resurfacing was done. The chief work done during the year was the construction of Silver Creek bridge opposite lot 17, concession 1, Malahide. The new reinforced concrete bridge is 100 feet in length with a 16-foot clear waterway and 12 feet high. The fill and earthwork necessitates the moving of approximately 15,000 cubic yards of earth. The bridge was built by the county by day labour.

During the year a new 5-ton motor truck was purchased. This, along with the two trucks (5-ton) purchased in 1920, makes a fleet of 3 trucks operated by Elgin County.

The method of applying gravel and keeping the surface of the county roads in good condition is to be commended. There remains only 19 miles of county roads not surfaced out of a total of 262 miles. When it is taken into consideration that Elgin County took up the matter of county roads in 1917, it speaks well for the organization and the work that has been done by the county officials.

The following table shows the mileage of various types of road at the end of 1921:

Type	Provincial Highway Miles.	Provincial County Miles.	County Miles.	Township Miles.	Total Miles.
Earth.....	1.70	19.00	336.25	356.95
Gravel.....	56.60	35.25	192.57	507.75	792.17
Stone.....	3.50	12.00	4.75	20.25
Total.....	58.30	38.75	223.57	848.75	1,169.37

Percentage of roads surfaced—69.47%.

Township Work

All the townships in Elgin County are taking the Government aid. The work in North Dorchester, Yarmouth, Malahide, Dunwich and Bayham, is directed by township road superintendents. During 1921, the township of Yarmouth purchased a motor truck and loading bin at a cost of \$10,000. All the townships in Elgin County have either commuted or abolished statute labour. 1921 expenditure on township work (approved) amounted to \$128,797.19. Special mention should be made of the good work carried out by South Dorchester and Yarmouth townships during 1921.

KENT COUNTY

Kent County during 1921 spent on the County Road System \$567,930.48. Since 1917 the total expenditure made by the county has been \$889,552.25, so that the expenditure made in 1921 was by far the largest outlay for any one year. During the year, 12 miles of concrete roads were constructed. The contract prices ranged from \$2.60 to \$3.83 per square yard. On the Chatham Suburban Roads, Provincial County Road No. 62, 2.75 miles of concrete pavement was constructed, 18 feet in width. From the end of this at the Gregory drain to Cedar Springs, gravelling was done. Other stretches of concrete pavements were built in the vicinity of Paincourt, Tilbury, N. Thamesville and east from Wallaceburg. Greater care should be given to the matter of efficient concrete inspection. The proper completion of side-ditches and shoulders on these concrete roadways should receive prompt attention.

Special grants were made to the urban municipalities of Wallaceburg, Ridgetown, Blenheim, for the purpose of building connecting links of the County Road System.

During the year 15 acres of gravel was purchased by the county just west of Cedar Springs on Talbot Street and a storage bin and loading equipment was erected. Two motor trucks were purchased. With the trucks and teams about 25 miles of gravelling has been done and the work is standing up in first-class condition. The Duffis Creek Bridge just south of Thamesville was completed, as was also Otter Creek Bridge north of Wallaceburg.

The following table shows the mileage of various types of road at the end of 1921:

Type	Provincial Highway Miles.	Provincial County Miles.	County Miles.	Township Miles.	Total Miles.
Earth.....	25.56	29.98	107.87	909.50	1,072.91
Gravel.....	61.80	36.50	56.50	305.50	460.30
Stone.....	1.00	1.00
Concrete.....	0.50	10.27	3.13	13.90
Total.....	87.86	77.75	167.50	1,215.00	1,548.11

Township Work

All the townships (10) in Kent County participated in the 20 per cent. aid to townships for 1921. The township of Zone appointed a township road superintendent. The townships of Harwich, Orford, Raleigh and Romney still retain statute labour.

LAMBTON COUNTY

During 1921, Lambton County resurfaced about 80 miles of county roads with gravel. Three new motor trucks were purchased in 1921, and this, along with two trucks purchased in 1920, makes up a fleet of 5 trucks. Considerable hill cutting has been done at Wilkesport and between Alvinston and Waterford. A number of substantial bridges have been constructed during the year, chief of which were Telford bridge and Bradshaw bridge. The concrete work on bridges and culverts throughout has been of a good character and shows the benefit of efficient inspection and supervision. More attention has been given to the matter of spreading gravel and the results are beginning to show the benefits.

The following table shows the mileage of various types of road at the end of 1921:

Type.	Provincial Highway Miles.	Provincial County Miles.	County Miles.	Township Miles.	Total Miles.
Earth.....	28.50	123.75	762.00	914.25
Gravel.....	37.98	56.00	123.25	518.00	735.23
Stone.....	5.25	5.25
Concrete.....	2.50	2.50
Total.....	40.48	84.50	252.25	1,280.00	1,657.23

Percentage of roads surfaced—44.83%.

Township Work

All the townships in Lambton County, with the exception of Dawn Township, took advantage of Government aid during 1921. The townships of Brooke, Euphemia, Plympton and Warwick still retain statute labour. The total approved expenditure for 1921 on township road work was \$122,227.00.

MIDDLESEX COUNTY

The county's expenditure on county roads for 1921 amounted to \$218,599.01. Approximately 125 miles of resurfacing with gravel has been completed. The county graded approximately 12 miles and gravelled 12 miles of the system during the year. Considerable hill cutting has been done in the vicinity of Parkhill and in McGillivray Township.

A gasoline gravel loader was purchased during the year and has given good satisfaction. The county purchased one motor truck and turned in one of their used trucks (5-ton) and obtained a new 3½-ton truck. This makes a fleet of four motor trucks for the county. The operating of these motor trucks has cut the cost of gravelling less than half of what it formerly was with teams.

After a few years' delay on the London Suburban Roads, plans are under way for the improvement of the roads during 1922.

A grant was made to the village of Glencoe for the purpose of building a concrete pavement on the main street of the village.

The following table shows the mileage of the various types of road at the end of 1921:

Type	Provincial Highway Miles.	Provincial County Miles.	County Miles.	Township Miles.	Total Miles.
Earth.....	6.64	28.30	440.50	475.44
Gravel.....	87.07	58.25	352.20	1176.50	1,674.02
Stone.....	2.00	3.00	5.00
Concrete.....	5.50	5.50
Total.....	99.21	58.25	382.50	1,620.00	2,159.96

Percentage of roads surfaced—77.98%.

Township Work

All the townships in Middlesex County took advantage of the Government aid in 1921. The townships of McGillivray, Lobo, and Delaware appointed township road superintendents. The townships of Mosa, West Nissouri, Biddulph, North Dorchester and London townships still retain statute labour. The appropriated expenditure on township roads in Middlesex county amounted to \$180,000. Special mention should be made of the system and organization as carried out in Lobo township.

TORONTO, May 15th, 1922.

W. A. MACLEAN, ESQ.,
Deputy Minister of Highways, Ontario.

SIR:

I have the honour to submit a summary report on the work carried out on county and township roads during the year 1921 in the counties of Carleton, Prescott and Russell, Renfrew, and Stormont, Dundas and Glengarry.

Most of the townships, with the exception of those in Renfrew which are receiving Colonization Aid, availed themselves of the aid as provided for in the 1920 legislation of the Ontario Highways Act, and the present outlook is that the few remaining townships will shortly fall in line. Statute labour has been either commuted or abolished in the majority of the townships and, with the possible exception of Renfrew County, Statute Labour should be a thing of the past in the very near future in this district.

It is gratifying to report that the programme carried out showed a tendency towards greater continuity in construction and a fuller realization that drainage is the first principle of construction.

Respectfully submitted,

C. W. CORNELL,
District Engineer of Municipal Roads.

CARLETON COUNTY

The county of Carleton, including the suburban roads, had 284 miles of roads in their County Road System at the end of 1921. Of this mileage some 51 miles were designated as Provincial County Road and the rest as County Road. Of this about 30 miles are suburban roads adjacent to the city of Ottawa.

A large programme of work was carried out during the past season which involved in all a total approved expenditure of \$807,855.25. Of this, approximately \$358,000 was spent on the suburban roads, while the remainder was distributed throughout the County Road System. The work on Provincial County Road No. 89, known as the Metcalfe Road, consisted of the

CARLETON COUNTY ROAD

Asphaltic concrete surface 20 feet wide on Metcalfe Road, Ottawa Suburban Roads Commission

construction of 4 miles of waterbound macadam roadway from the Dundas County boundary northerly through the village of Vernon. In addition to this, 3 miles of grading was completed along with the necessary tile and small concrete culverts. On several county roads throughout the county some 16 miles of grading was completed in addition to the construction of 10 miles of stone road and 15.83 miles of gravel road. The outstanding work completed by the Ottawa Suburban Roads Commission was 9.2 miles of waterbound macadam roadway, which was constructed on the Metcalfe Road from near Billings' Bridge to the Osgoode boundary. Part of this road had a bituminous surface treatment and the outlook is that in the very near future the greater part, if not all, of this road will have a surface of asphaltic concrete. In addition to the above, the Suburban Roads Commission completed one mile of waterbound macadam on the Richmond Road and 1.38 miles on the Bovesville Road and also 4.75 miles of grading on the Russell Road. Three bridges were constructed by the Commission during the season, varying in span from 12 to 18 feet. The most important of these was the Sawmill Creek bridge, a reinforced concrete structure carrying a heavy fill, built on the Metcalfe Road near Billings' Bridge at a total cost of \$13,393.00.

Quite a large bridge programme was carried out in the county, nine structures being completed, varying in span from 10 to 59 feet. The most important of these were the Carlsbad Springs bridge and the Stevens' Creek bridge. The former is a 50-foot span and the other a 59-foot span. Both are of steel superstructure on concrete abutments. In addition, the Kenmore bridge was constructed on County Road No. 7. This is a two-span structure on concrete abutments and pier, one span being 50 feet and the other 72 feet.

Township Work

All the townships in the county took advantage of the aid available under the Ontario Highways Act, and all but two townships appointed road superintendents. Four out of the ten townships in the county have abolished statute labour, five townships have commuted it and one still retains statute labour.

UNITED COUNTIES OF PRESCOTT AND RUSSELL

The United Counties of Prescott and Russell adopted a County Road System in 1916. The system at that time consisted of 225 miles of the leading roads throughout the United Counties. As it now stands it consists of eight miles of Provincial County Road, and 223 miles of County Roads. It was evident at the outset that a very large programme of maintenance and construction would eventually have to be undertaken to get even the leading roads of the County System in passable shape for the ever increasing motor traffic. The county officials apparently realized the situation as is evidenced by the steady increase in their county road appropriations. The approved expenditure in 1921 amounted to \$656,026.06.

The outstanding single piece of work during the season was the construction of $5\frac{1}{2}$ miles of bituminous penetration road 16 feet wide on Provincial County Road No. 130, between

Hawkesbury and Vankleek Hill. In addition, a large programme of work was carried out on several county roads throughout the system, consisting in all of some 5.95 miles of grading, 20.16 miles of stone road, 6.62 miles of gravel road and 5.25 miles of bituminous penetration surface. A large bridge programme was also carried out during the season, eleven structures in all being completed. These varied in span from 12 to 40 feet and consisted for the most part of steel superstructure on concrete abutments.

Township Work

Nine out of the eleven townships in the United Counties took advantage of the aid available under the Ontario Highways Act, Longueuil and Caledonia being the two exceptions. All of the townships which passed the necessary expenditure by-laws appointed road superintendents. Seven of the eleven townships have commuted statute labour, one has abolished it, and three still retain statute labour.

RENFREW COUNTY

The easterly portion of Renfrew County, consisting of ten townships, adopted a County Road System in 1917. Comparatively little, except organization and preliminary work, was done until the year 1919. Since then, however, the amount of money appropriated for county roads has gradually increased, amounting this year to a total approved expenditure of \$450,607.62.

The County Road System at the close of 1921 consisted of 47.5 miles of Provincial County Roads and 172.5 miles of County Roads, a total of 220 miles, which is approximately 23 per cent. of the total road mileage in the area covered by the County Road System.

The physical features of Renfrew County are such that many costly construction problems are presenting themselves, especially on Provincial County Roads, which some of their more fortunately situated neighbours do not have to contend with. The rocky and winding nature of many of the leading roads necessitates a large amount of rock work to give the necessary clear line of vision and also to bring them to the Departmental standard. The result is that the cost per mile for construction, no matter what type of road is constructed, in a great many cases will run much higher than in more favourably situated counties.

The work on Provincial County Roads this season consisted of the construction of 7.3 miles of crushed stone road, in addition to grading 6.85 miles and building the necessary culverts preparatory to construction next year. The town of Renfrew received a grant on their Provincial County Road connecting link.

The County road work consisted of grading 2.25 miles and the construction of 6.2 miles of crushed stone road and 31.3 miles of gravel road. In addition, one 20-foot span reinforced concrete bridge was built on Provincial County Road No. 96, while the County Road bridge work consisted of some four structures varying in span from 10 to 36 feet. The 36-foot span was composed of a concrete substructure with a steel superstructure.

Township Work

The townships in the area covered by the County Road System are receiving Colonization Road aid so that they were not eligible for the grant under the Ontario Highways Act.

UNITED COUNTIES OF STORMONT, DUNDAS AND GLENGARRY.

The United Counties of Stormont, Dundas and Glengarry adopted a County Road System in 1916. The system at that time comprised some 433 miles of the main thoroughfares throughout the United Counties. The system as it now stands consists of 122 miles of Provincial County Roads and 292.5 miles of county roads.

The roads at the time the system was designated were for the most part in poor condition and suffered largely from want of maintenance. This necessitated a somewhat large and progressive programme as the problem was to keep passable the maximum amount of ordinary roads while construction or extensive improvement was taking place on the more important roads. How well this programme has succeeded is shown by the fact that of the 122 miles of Provincial County Roads, 28.5 miles are built of gravel, 51.5 miles are of stone and 25 miles of bituminous surface; and of the 292.5 miles of County Roads, 94.5 miles are of gravel, 92.5 miles are of stone and 20.5 miles of bituminous surface, so that it is apparent that the greater portion of the County System has received at least a coat of metal. The unmetalled portion has received considerable draining and grading in preparation for future construction.

The United Counties undertook a very large programme of work during the past season. In all, some 30 miles of waterbound macadam roadway were constructed on Provincial County Roads. This included the grading, metalling to the full 16 feet in width and the laying of pipe and tile culverts and the building of small concrete culverts. A considerable proportion of the stone roads will eventually receive a bituminous surface treatment. The average cost of the work was approximately \$12,125 per mile. A similar extensive programme was carried out on County Roads, approximately 27 miles of waterbound macadam roadway being constructed up to the County Road standard at an approximate cost of \$11,725 per mile. One of the first

difficulties met with in these counties when construction is attempted is the narrow right-of-way which is characteristic of several of the eastern counties. The counties, however, are adhering to the policy of widening the right-of-way before starting construction. The bridge construction programme was not an extensive one and consisted mainly of four small concrete structures of 16-foot span with the usual width of roadway.

In addition to the above, a large programme of maintenance and repair was in evidence throughout the counties, some \$107,898.57 having been spent in this manner. Continuous stretches of loose stone or gravel were applied in many cases, which will serve as a base for future work and in the meantime will keep the traffic out of the mud and give the people a reasonably passable road until such time as construction can be undertaken.

If the present rate of construction can be maintained in these counties together with a suitable appropriation for maintenance, bad roads on the County Road System should in the near future be a thing of the past.

Township Work

All the townships in the United Counties with the exception of Lochiel took advantage of the aid available under the Ontario Highways Act, and with the exception of Osnabrock and Matilda, road superintendents were appointed by each township. Eight out of the twelve townships have abolished statute labour, one has commuted, one partially commuted, and two still retain statute labour. The outlook, however, is that in the very near future statute labour will be entirely abolished in the United Counties.

TORONTO, April 13th, 1922.

W. A. McLEAN, Esq.,

Deputy Minister of Highways, Ontario.

SIR:

I have the honour to submit a summary report on the work carried out under the Highway Improvement Act during the year 1921 in the counties of Ontario, Victoria, Durham and Northumberland, Peterboro and Prince Edward, in pursuance of the provisions of the said Act.

With the exception of Ontario County substantial additions were made to the number of townships taking aid under the Act in all the counties. There still remain a few townships however, which for one reason or another have not come under the Act. It is to be hoped that these will soon avail themselves of the provisions of the Act. As councillors and Reeves of the township the county councillors get their primary education in road building. In those counties where the townships are taking aid a noticeable improvement may be seen over those which are not. It is shown in the character of the work undertaken and the manner of carrying it out.

Considerable work of a permanent nature in the building of bridges and culverts, putting down of macadam road and hill cutting was undertaken during the year throughout the counties. The usual maintenance was carried out on the roads as well.

The construction of roads is in a large measure a question of labour. In this connection a noticeable advance has been made in the organization and direction of the labour element. Efficiency was the keynote of the summer's work. It is well this is so. Owing to the lowering in the cost of wages there is grave danger of efficiency being lost sight of, with the inevitable result of a higher cost per mile of road. In addition, labour is becoming more plentiful, so that officials are not so chary in demanding efficiency from labour.

The system of financing followed in these counties is the same. That is, they levy a tax of so many mills for County Road purposes. The expenditure upon the roads can then be said to come from the county's income. They are not touching their borrowing power or their capital account. It is a system that is absolutely safe and sound as it leaves their capital unimpaired.

Respectfully submitted.

JOHN MACVICAR,

District Engineer of Municipal Roads.

ONTARIO COUNTY

The total road mileage for this county is 1,550 miles. Seventy per cent., or about 1,085 miles, of this is surfaced with gravel, stone or bituminous penetration. This is a creditable showing for the county. Of this mileage 153 miles are County Roads, 58 miles are Provincial County Roads, and 42 miles are Provincial Highways.

At the inception of the County Road system in this county a wise policy was adopted by the officials. They have consistently kept in mind the permanent features of the road problem. A large proportion of their expenditure was made upon the following features, viz.: alignment, drainage, structures, foundations, and grades. That is, their expenditures have been made in the nature of investments and upon which they will reap a large interest in the way of lessened cost of maintenance on these roads as time goes on. I am sure it cannot but be gratifying to

the Department to know that for practically all monies paid out to this county, work of a permanent nature can be seen for it. A total of \$89,965.00 has been expended by the county on concrete culverts and bridges to date. The total amount paid by the Department in grants is only slightly in excess of that amount.

It is now four years since the County System was adopted in this county and during that time they have constructed 42 reinforced concrete culverts out of a total of about 120, and 20 bridges of reinforced concrete or steel out of a total of about 35 on the system. In 1921, the county constructed 21 reinforced concrete culverts and 6 concrete bridges at a cost of approximately \$33,500.00. The work for the most part was carried out under contract. On the construction of the Provincial County Roads, \$8,454 has been expended, and on maintaining them \$20,411 has been expended. Upon County Roads there has been expended \$21,179 on construction and \$49,758 on maintenance. These sums include expenditure upon permanent features such as alignment, ditching and foundations and grade reductions. The perishable features of the highways also came in for considerable attention. Long stretches of the roads were gravelled.

Township Work

The township roads comprise a total of 1,290 miles. Of this mileage about 460 is earth road, 790 gravel and 42 broken stone. Of the township roads there is 64 per cent. surfaced. A number of concrete culverts of approved design were built by the different townships. In addition, considerable resurfacing was done with gravel.

VICTORIA COUNTY

The southern six townships of Victoria County have a grand total of 948 miles of road. Out of this, there are about 13 miles of Provincial Highways, 190 miles of County Roads and 745 miles of Township Roads. On the County Roads 184 miles are gravelled and 6 miles are earth. On the township roads about 205 miles are earth and 540 miles are gravelled.

During the past season the work for the most part was of an excellent nature. This results from a workable organization together with a good selection of road building machinery. The day labour system is in vogue and the wage item alone amounts to about 60 per cent. of the total expenditure, and this was left entirely in the county.

The type of road built was a macadam, rolled to a consolidated depth of about 8 to 10 inches. Field stone were crushed in the county's crushers and laid on the road, then rolled and finally treated with an application of oil. Of this type of road about 3½ miles were built. The average cost was \$1.19 per square yard. Bolton Street, Bobcaygeon, was paved with a bituminous bound macadam. It is the business street of the village and it was thought advisable to pave the full width, supported by a curb and gutter.

Grade reductions were carried out in two rock cuts at Fenelon and Kelley's Hill; also earth hill reductions at Logan's Hill and Crawford's, Omemece. In addition a valuable improvement has been made to the system at Riaboro. At this point two level railroad crossings have been eliminated on the road leading from Lindsay to Peterboro. During the season 2 bridges, 15 box culverts, 59 pipe culverts and about 2,000 feet of tile drains were constructed.

Township Work

The township roads comprise a total of 745 miles. Of this, mileage about 205 are earth roads, about 497 are gravel and about 43 stone. Nearly 70 per cent. of the township roads are surfaced with either gravel or broken stone. This being the first year the townships in this county took advantage of Government aid, a great deal of the work was below standard. A number of culverts and some bridges were built, however, that were of approved design. Considerable resurfacing was done with gravel.

DURHAM AND NORTHUMBERLAND

In these United Counties there is a grand total of 2,658 miles of road. The Provincial Highway takes out 78 miles and of the balance 365 are county roads and 2,215 township roads. The county roads have 345 miles gravelled and 20 miles of earth. During the past season about 5 miles of gravel road were constructed. Of this amount, 3 miles were on Provincial County Roads and 2 miles on county roads, at a total cost of \$42,000.00. In addition to this expenditure, nearly \$50,000 was expended upon maintenance and repair of the roads. Four large bridges were constructed during the year at a cost of \$11,500. The special grants to towns and villages amounted to \$14,000, which was expended upon construction in the various places. Considerable improvement is to be noted in these counties in the organization for handling the work. Larger units were employed with the result that the work came more closely under the direct supervision of the superintendent. As a consequence a very great improvement in the class of work done is noticeable. The counties require a better equipment of modern road building machinery and as this is provided further improvement in the road building organization will result.

Township Work

Practically all the townships in the United Counties of Durham and Northumberland are taking aid under the Ontario Highways Act. Some are working under a superintendent, but most of them are working under the reeve, as they have not yet abolished statute labour. Of the total 2,215 miles of township roads only 967 are gravelled. Thus 1,243 miles are still earth roads. In a county where road building material is plentiful this is a backward condition to find. However, a noticeable improvement is found in the interest taken in road building in the past few years. During the past summer a number of large bridges were built of approved design, also a number of concrete culverts. For the most part, however, the work consisted of resurfacing with gravel and some grading.

PETERBORO COUNTY

During the past season considerable construction work was done on the suburban roads. The type of road built is gravel, and 2½ miles were built. Abundance of good gravel is available within easy hauling distance, though much of it was crushed owing to the prevalence of an over-size of stone. Grading outfits prepared the subgrade. Upon the county roads, resurfacing and patching was the main work undertaken.

At the inception of the County Road System in the county it is doubtful if the farmers seriously considered their income in relation to the mileage taken on. The grand total of mileage in the southern half of the county is 808 miles. Of this, 8 miles are Provincial Highways, 252 miles Provincial County and County Roads, and 548 miles are township roads. The funds provided to look after this 252 miles is about \$20,000. With so small a provision of funds, the mileage should be small in proportion, so that the amount would adequately care for the mileage.

Township Work

In Peterboro County there are six townships taking aid under the Act. Of these, Otonabee, Smith and Monaghan carried out quite extensive programmes consisting of grading, graveling and some culverts of approved design. The township roads in this county comprise a total of 548 miles; of this, 184 miles are earth, 348 miles gravel and 15 miles stone.

PRINCE EDWARD COUNTY

There is a grand total of 603 miles of road in the county of Prince Edward. Of this mileage there is 29 miles of Provincial Highways, 126 miles of Provincial County and County Roads, and 447 miles of Township Roads. The County Roads have 25 miles gravelled, and 96 miles stoned. The townships have 3 miles stoned, 287 miles gravelled and 157 miles of earth.

During the past season the work for the most part was good. The type of road built was a water bound macadam. A block of about 500 feet in length was laid in the town of Picton of bituminous penetration. Quarries are opened at advantageous points along the roads and crushing outfits installed. The material is hauled an economic limit of about 1½ miles each way from the crusher and rolled in the road. Grading outfits prepare the subgrade for the stone. In this manner over 5 miles of road were built in the county of Prince Edward during the past summer. In addition a few miles were resurfaced or patched. Upon road construction about \$20,000 were expended; upon maintenance and repair about \$36,000; on new machinery \$3,800. The chief items of machinery purchased were a steam engine and a tractor.

Township Work.

There are only two townships taking aid in this county. In one the work consisted almost entirely of grading and graveling, resurfacing being the largest item. In the other, a new bridge of approved design was built. They also did resurfacing but no road construction work was undertaken.

W. A. McLEAN, Esq.,
Deputy Minister of Highways, Ontario.

TORONTO, June 21st, 1922.

SIR:
I have the honour to submit the following report on county and township road work during 1921 in District No. 2, comprising the counties of Bruce, Huron, Oxford, Perth and Waterloo.

In the counties whose management of assumed roads is of a purely county nature, very satisfactory improvements were accomplished. A creditable mileage of road was brought up to Departmental standard, with particular attention to drainage and foundations; gravel resources were being studied and mobilized; road surfaces received increasing and effective patrolling, and the actual costs in each instance reflected the superiority of efficient organization.

Several counties, however, conduct their county road affairs on a township basis, as regards either management or financing, or both. They are, accordingly, of their own volition, labouring

under a serious disadvantage. The condition of the roads evidences a lack of systematic maintenance; results are not always commensurate with the costs; expenditures are not regulated, in every case, to fulfil the requirements of traffic. In numerous instances costly pieces of work have fallen below Departmental standards owing to lack of adequate county supervision and insufficient instruction to employees.

If, in fairness to those counties whose organization strictly conforms with the requirements of the Department, the same standard of workmanship were required of the counties who manage their county roads on township basis, the latter would benefit comparatively little from the financial assistance open to them under the Highway Improvement Act. Every effort is being made to revise and improve the systems referred to, the chief obstacle to reorganization being a hesitancy to depart from old customs.

All of the townships in the district, except the four in Bruce Peninsula receiving Colonization Aid, participated in the Provincial subsidy authorized by the Ontario Highways Act. Very encouraging improvement is evident, particularly in the townships that have abolished statute labour and have appointed road superintendents. From a survey of costs, involving over 300 records of work in the 55 townships concerned, the average cost of applying gravel by contract or day labour was 44½ cents per yard-mile (including loading and spreading) as against an actual equivalent of \$1.09 per yard-mile by statute labour, or of \$1.20 per yard-mile, adjusting all statute labour rates to common basis of \$2.00 per day. There were approximately 130,000 days of statute labour performed in District No. 2 in 1921, representing a commuted value of over \$240,000. Statute labour work being almost entirely confined to gravelling, if computed at a cost of 44½ cents instead of \$1.09 per yard-mile, an equivalent mileage of road could have been resurfaced for \$96,000, an average expenditure of \$2,400 per township concerned. This expenditure amounts to approximately one mill on the average township assessment.

Municipal officials recognize that the old system is inadequate and wasteful, but the average ratepayer, not realizing it to the same extent, through lack of knowledge of what savings are being effected by townships that have abolished it, advocates its retention. Progress is being made, however, and in numerous townships a campaign towards the abolition of statute labour is under way.

All of which is respectfully submitted,

H. IRWIN,

District Engineer of Municipal Roads.

BRUCE COUNTY

Bruce County Road system comprises 343.5 miles, being 17.3 per cent. of the total road mileage. With the exception of 9.5 miles of waterbound macadam, all the roads in the system are of gravel.

Provincial County Roads total 132.3 miles on which maintenance costs in 1921 averaged \$182.00 per mile. Construction work was continued on the "Centre Road" through the peninsula. The year's programme of blasting and rock work in Albemarle was satisfactorily completed. The hauling of field stone, to provide a roadbed through the Eastnor swamp (approximately 2 miles in length) was about 95 per cent. completed, lack of snow depriving the workmen of sufficient winter roads to finish the section. The greater part of this stone was spread and prepared for gravelling. Ditches and culverts in the swamp section were completed. In Brant Township, 3¾ miles of waterbound macadam cost \$8,400 per mile, complete.

County Road construction included 2¼ miles of crushed gravel on Road 21, westerly from Walkerton, at \$10,100 per mile including hill-cutting and numerous culverts.

Bridge work cost \$24,600 and \$33,750 on Provincial County and County Roads respectively. The former included two 35-foot reinforced concrete trusses in Huron Township and a complete new substructure and floor for Rae's Bridge north of Paisley. Eleven bridges were built on County Roads, the largest span being 122 feet, over the Sauble River, near Hepworth.

A total of \$8,000 was spent on new machinery, including one steam tractor, fourteen light graders, eight dump wagons, two concrete mixers and twelve drags.

Labour costs decreased during the year from 35 cents to 25 cents per hour for men and from 65 cents to 50 cents for teams. Stone and gravel crushing averaged 60 cents per cubic yard elevated to bins, the figure being above normal owing to the crushing of considerable quantities of field stone in localities devoid of gravel. Concrete work averaged \$10.00 per cubic yard, steel supplied.

The chief connecting link construction took place in the towns of Walkerton and Wiarton. The former laid a 2½-inch bitulithic pavement on a 6-inch concrete base, costing \$57,000 for paving at \$3.60 per square yard. Wiarton added approximately one-half mile of one-course concrete pavement to the portion completed in 1920, at a cost of \$2.48 per square yard.

At the close of the year Mr. D. J. Izzard resigned from the office of County Road Superintendent after 40 years' service in county and municipal affairs. The offices of County Engineer and Road Superintendent were combined and G. E. Stephenson, B.A.Sc., was appointed, with G. H. Ruttie as Assistant Road Superintendent.

In 1921 the cost of engineering and supervision amounted to 3.1 per cent. of the expenditure, as compared with an average of 3.7 per cent. for the two previous years.

Township Work

Of the sixteen townships, the four peninsular municipalities received Colonization Aid; the remaining twelve participated in the 20 per cent. grant. The total approved expenditure amounted to over \$125,000 for a township road mileage of 1,607.47 miles, of which 1,063 miles are surfaced. The average expenditure per township was over \$10,000 or \$118 per mile of surfaced roads.

A number of townships effected gratifying improvements in bridge and culvert construction, the most notable structures being a 173-foot steel and concrete bridge at Maple Hill, in Brant Township and a 105-foot steel girder bridge in Culross. Huron Township built five bridges with spans varying from 20 to 50-foot.

Of the twelve townships concerned, statute labour has been abolished in two, commuted in two and retained in eight. The average cost of loading, transporting and spreading gravel by statute labour (adjusted to \$2.00 per day basis) was \$1.15 per yard-mile in the townships involved. Under contract or day labour procedure this operation throughout the county averaged 46½ cents per yard-mile. Two townships had duly appointed road superintendents in charge of their work during the year.

HURON COUNTY

☐ The system in Huron comprises 98 miles of Provincial County and 329 miles of County Road, the total, 427 miles, being 19.9 per cent. of the total road mileage within the county. In view of the extensive and rapidly increasing summer traffic along Lake Huron, the entire Lake Road from Grand Bend to Amberly (with the exception of that portion within the town of Goderich) was designated a Provincial County Road during the year.

Expenditure on Provincial County Road construction was small, amounting to \$3,650, and involving an 8-foot reinforced concrete culvert in Morris, and 1¼ miles of crushed gravel construction in Stanley, both on Road No. 30. Maintenance on this class of road averaged \$405 per mile, of which \$302 was expended on resurfacing with crushed gravel. The completion of the Grand Bend Bridge and an 11-foot reinforced concrete bridge in Stanley, both on Road No. 117, totalled \$5,200 for bridge construction on Provincial County Roads.

On County Roads 10½ miles of crushed gravel construction averaged \$1,532 per mile including grading and drainage. A total expenditure on maintenance of \$81,500 averaged \$235 per mile including \$181 for resurfacing. Grading and dragging of roads cost \$29.50 per mile. Maintenance resurfacing comprised over 180 miles of a thin coat of material (mostly crushed) spread to the full width of the travelled road. Considering this, in conjunction with the low maintenance

HURON COUNTY ROAD
Grade reduction in Grey Township.

costs cited above, the effectiveness of timely maintenance, and the efficiency of a well-organized patrol system are revealed in the statements of road expenditure as clearly as they are evident to the users of the roads.

New machinery included eight light graders, six drags, eleven scrapers and fifteen gravel screens, a total expenditure of \$2,250. Repairs were light at \$1,788 considering the almost constant operations throughout the season of six crushing outfits.

Labour costs decreased during the season, the average being 25 cents per hour for man, 35 cents for foreman and 55 cents for man and team. Crushing cost 42 cents per cubic yard, concrete \$11.00 per cubic yard including steel. The cost of engineering and supervision amounted to 2.8 per cent. of the total expenditure.

The town of Wingham paved with one-course concrete one-half mile of connecting link on Provincial County Road No. 30 at a cost of \$2.83 per square yard including $1\frac{1}{4}$ miles of underdrain and considerable cut and fill.

Township Work

All townships, sixteen in number, took advantage of the Provincial subsidy provided by the Ontario Highways Act. On a total township road mileage of 1,670 miles the amount expended under the Act was \$126,000. There are 1,313 miles of surfaced township roads.

Statute labour has been abolished in four townships and commuted in two. Eight townships had road superintendents. The application of gravel cost \$1.30 per yard-mile by statute labour (\$2.00 per day basis) and 42 cents per yard-mile by contract or day work on the average basis of 30 cents per hour for men and 60 cents for man with team.

OXFORD COUNTY

At the close of 1921, Oxford County Road System comprised 29.2 miles of Provincial County, and 251.3 miles of County Roads, amounting to 20.9 per cent. of the entire road mileage.

Provincial County Road improvement was almost entirely confined to maintenance, costing \$23,974.61, or over \$820 per mile. Of this, only \$15.82 per mile was expended on grading and dragging.

County Road construction cost \$74,245.48. This included nearly 13 miles of underdrains, varying from 4 inches to 18 inches in diameter. On Road No. 39 in North Norwich, $1\frac{1}{4}$ miles of bituminous penetration pavement was constructed on a 8-inch stone base, at a cost of \$27,442.79, or \$1.73 per square yard. About 16 miles of gravel road construction cost \$36,118.41 or \$2,257 per mile. Bridge construction consisted of a 44-foot steel and concrete structure on Road No. 31 in Dereham, costing \$3,648.55, and a similar 44-foot span on Road No. 35 in South Norwich, which cost \$3,857.25.

Maintenance costs on County Roads totalled \$86,558.62, an average of \$265 per mile, of which only \$10.80 per mile was spent on grading and dragging. The lack of any form of patrol system is clearly indicated on the small use of the drag and grader. That this is quite the reverse of representing a saving to the county is shown in the relatively high costs of maintenance per mile.

New machinery included one large and twenty-five small graders and six scrapers, the expenditure being \$5,830.71. Repairs and rentals totalled \$8,264.79, involving chiefly the complete overhaul of four crushing plants and the rental of a number of tractors.

The towns of Tillsonburg and Norwich constructed bituminous surfaced roads on connecting links. The former accomplished the surfacing of $1\frac{1}{4}$ miles for \$13,100.00 including culverts and underdrains.

Labour costs averaged 30 cents for men and 60 cents for teams per hour. Gravel haulage was reduced in cost to 40 cents per yard-mile (including loading and spreading) by the use of a motor truck. Concrete construction cost \$8.00 per cubic yard, reinforcing supplied. Tractors were rented for \$8.00 per day in many instances.

Engineering and supervision cost the county 1.2 per cent. of the total expenditure as compared with 1.9 per cent. in 1920 and 2.0 per cent. in 1919.

County Road management in Oxford is at a serious disadvantage, arising from the township organization that prevails. While machinery and general expenses are met by county funds, the expenditure on road and bridge construction and maintenance is a township, town or village matter. There is no road and bridge committee; the road superintendent and reeve of the municipality decide upon the extent and nature of the work that is to be done. There is no patrol system, consequently, although the expenditure on maintenance is high, the road surfaces are not given the attention warranted by the investment made therein. A heavy expenditure on reconstruction recurs every few years on nearly every road as a result of lack of maintenance supervision. These factors, together with an unequal distribution of gravel resources, indicate the economies that could be effected if a purely county system were adopted. This procedure cannot be too strongly emphasized.

Township Work

Of the eleven townships, five have abolished statute labour. Gravel, loaded, hauled and spread cost 41 cents per yard-mile when handled by contract or day labour, but averages \$1.07

in the townships retaining statute labour. Of the 1,039.5 miles of township roads, 839.4 miles are gravelled and 6.1 miles surfaced with broken stone. All townships received benefit from the 20 per cent. subsidy and expended slightly over \$133,000.

PERTH COUNTY

There are 33.6 miles of Provincial County Roads and 203.2 miles of County Roads in Perth. This mileage involves 17.5 per cent. of all the roads, and includes 0.5 miles of concrete, 3.2 miles of bituminous surface, 9.8 miles of stone, 217.2 miles of gravel and 6.1 miles of earth roads.

On Road No. 46 (Provincial County) a concrete pavement one-half mile in length was constructed through the village of Atwood in the township of Elma, the expenditure being \$16,531.15. The work was not done in accordance with the specifications stipulated by the Department, and portions of it failed before the close of the year. With the exception of 400 yards of crushed gravel construction in Moncton, the only other construction expenditure on Provincial County Roads was for underdraining.

The chief item of maintenance expenditure covered the resurfacing of several portions of Provincial County Road No. 46 with crushed gravel at a cost of \$5,428.25. This work was not done in conformity with Provincial County Road standards and the subsidy allowed thereon was 40 per cent. of the cost. Out of a total maintenance expenditure on County Roads of \$55,000.00, resurfacing cost \$45,151.52, or an average of \$222.20 per mile, and grading \$23.44 per mile. County Road construction included 110 rods of waterbound macadam on a newly added portion of road from the G.T.R. station at Sebringville to the village at a cost of \$800, the Department supplying the stone to compensate for the extra wear on the old road occasioned during the construction of a neighbouring portion of Provincial Highway. There was also one-half mile of crushed gravelling in the village of Dublin, and some 392 rods of underdrains in various localities. Bridge work involved three structures, the chief being a 60-foot span, steel and concrete, in Mornington (County Road No. 14) costing \$5,655.50.

Too much emphasis cannot be placed upon the inadequacy of the County Road organization in Perth. Each township employs a foreman, or commissioner, who, under the direction of the reeve or township council, oversees the County Road work. Bills and accounts are sent to the County Road Superintendent, who charges them up to the roads concerned and passes them to the County Treasurer for payment. The County Road Superintendent is at the service of the townships for the preparation of bridge plans, estimates for drains, grades, etc., and acts generally in an advisory capacity as County Engineer. Apart from this, however, his duties are purely clerical, and the actual work of construction or maintenance has little or none of his personal superintendence. The most important duties pertaining to the office of County Road Superintendent are carried out by the Reeves themselves.

Perth, as a county, owns no machinery. Each township, operating completely within itself as regards County Roads, buys machinery, and uses it irrespectively of the equipment or needs of adjoining townships, and generally on County and Township Roads alike. It is obvious that County Roads in one township suffer the lack of certain equipment that is often lying idle in a near-by township.

The condition of County Roads in Perth indicates the lack of a suitable system of management. The county suffers from an unequal distribution of road material, from an inadequate arrangement as regards road machinery and from the lack of a system of maintenance and patrols. During 1921, the total expenditure on dragging, an operation strongly urged by the Department in the interests of smooth surfaces, amounted to \$3.80 according to the annual returns. The adoption of a purely county system of road management and finance would obviate most of these difficulties.

Township Work

Of 1,075 miles of township roads in Perth County, 829 miles have been gravelled and 33 miles surfaced with broken stone. The townships of Blanshard, Downie, Fullarton and Logan abolished statute labour some years ago and North Easthope commuted it this year. The application of gravel by statute labour methods averaged \$1.01 per yard-mile in 1921 as against an average of 48 cents per yard-mile for contract or day labour work. All townships received the 20 per cent. aid, the total approved expenditure on township roads being \$138,509.70, an average expenditure per mile of surfaced roads of approximately \$160.00. The township of Elma constructed six bridges during the year, 82-feet being the longest span, the bridge expenditure being \$13,882.00.

WATERLOO COUNTY

In Waterloo, with a total of 822 miles of all roads, 23.8 per cent. or 195.4 miles have been assumed as County Roads. There are 25.3 miles of Provincial County Roads, an additional 6.6 miles between Baden and Wellesley having been designated in 1921.

During the year the mileage of concrete roads in the system was increased to eight miles. There are 2.7 miles of stone, the remaining 184.7 being gravel roads.

On Provincial County Road No. 75, a total of 32,550 square yards of 7-inch concrete pavement 16-feet wide was laid by contract at \$2.24 per square yard. This important thoroughfare between the towns of Waterloo and Elmira was further improved at St. Jacob's Hill, by straight-

ening and grade reduction. In addition, about 750 linear feet of concrete, 16 feet wide, was laid on County Road 29b through Floradale.

Arthur Street, Elmira, a connecting link on Road No. 75, was paved with asphaltic concrete at a cost of approximately \$62,000 including grading.

The Kitchener Suburban Roads Commission laid 1.40 miles of concrete pavement in the vicinity of Bridgeport on County Road No. 10, at a cost of approximately \$44,500. This pavement is 20 feet wide, and was laid by contract at a cost of \$2.42 per square yard.

One new bridge, a 54-foot steel span with concrete abutments and floor, on County Road No. 25, and costing \$7,600, was the only expenditure under this heading, except the completion of guard rails on several structures built in 1920.

About nine miles of gravel roads were constructed to standard section, the chief items being 6.5 miles on Road No. 7, south from Breslau and 2.5 miles on Road No. 19, the average cost per mile being \$2,300. In all about \$165,000 was expended upon construction.

Maintenance expenditure averaged \$249.00 per mile. Labour costs averaged generally 30 cents per hour for man and 60 cents for teams. Slightly higher prices were paid, however, in the vicinity of Galt and Kitchener, where city prices had to be met. The general condition of gravel roads in Waterloo indicates the lack of a suitable system of patrolling the roads. Material is plentiful and of good quality, especially if crushed. The county council is considering the adoption of a straight county system of road management to facilitate the development of an adequate system of patrols.

Township Work

Approved expenditure on Township Roads in 1921 totalled \$46,776.13. All townships received aid through the Ontario Highways Act. Graveling, per yard-mile averaged \$1.22 under Statute Labour and 49 cents per yard-mile by contract. These figures are conclusive of the advantage, in the interests of economy, of abolishing the old system of road work and particularly so in view of the proximity to the brisk industrial centres of Kitchener, Galt, Preston, Elmira and Hespeler, whose calls upon the labour market have constituted an argument against the abolition of statute labour.

W. A. McLEAN, ESQ.,
Deputy Minister of Highways, Ontario.

TORONTO, June 21st, 1922.

SIR:
I herewith submit a report on work carried out on County Roads during the year 1921, within the Counties of Dufferin, Grey, Halton, Simcoe and Wellington.

All of which is respectfully submitted,

H. A. LUMSDEN,
District Engineer of Municipal Roads.

COUNTY OF GREY

Though one of the last counties to come under the Highway Improvement Act, this county has made steady and great progress since adopting the system in 1918.

A policy was adopted of constructing either waterbound macadam, or gravel roads with all reasonable speed and they have adhered to this, with a result that up to the end of 1921, out of the 68 miles of Provincial County Roads, 36 miles have been built and it is confidently expected that by the end of 1922 not less than 50 miles will be completed; this includes Suburban Roads.

Three complete outfits were at work throughout the year on Provincial County Roads, with the result that 8 miles of macadam road, 18 feet wide, were built in addition to 37 culverts, at a cost of approximately \$110,000, the somewhat high costs being necessitated by unusual construction difficulties in going through low-lying land, purchasing extra right-of-way, diversions, etc. Grades have been reduced to a maximum of 8 per cent. involving the cutting and straightening of two very steep hills at a cost of \$32,808.75. In addition six bridges were built.

On County Roads the progress has necessarily been somewhat slower, but throughout the season one outfit was continuously at work between Rock Mills and Priceville, where 7 miles of gravel road was built at a cost of \$41,839.80. Five bridges were also built on County Roads. The concentration of work on the most important roads has necessarily created some restlessness in townships where no work was in progress but with a little patience on their part the roads will be built, and a continuous and better system of roads will result.

As an instance of the great benefits to be derived, the 22 miles (Meaford to Owen Sound) could hardly be made in less than two hours with a car previous to construction, while now, though four miles yet remain to be built, the trip seldom takes more than an hour. In this con-

GREY COUNTY ROAD

18-foot concrete pavement—Provincial County Road, near Meaford.

nection it might be mentioned that the urgent need of regulations and control of bus services as to speed and load is very evident and already the roads are getting damaged through the fast travel of heavy motor vehicles in wet weather.

The maintenance of the roads has been for the most part fair, though in a few instances more might be done. The failure to use the drags at the right time or of the local overseer to be thoroughly interested in his work would account for most of the trouble where lack of maintenance is noticed.

Suburban Roads

This is the first year of operation by the Suburban Area Commission and \$14,384.41 was spent on new machinery. They have taken hold of the work well, and during the year much was accomplished. One and a half miles of water bound macadam were built, a bad swamp filled in on the Shallow Lake road and considerable hill cutting and grading was done as well as maintenance. The mileage taken over, 44 miles, is altogether too great, ranking second only to Toronto.

Township Work

Of the sixteen townships all but Sarawak received aid under the Ontario Highways Act. Of these, two have abolished and two have commuted statute labour, and where this has been done the work is inclined to show an improvement over the work of other townships. Over \$130,000 was expended on work by the sixteen townships. While considerable improvement has been made there remains much room for improvement. Better bridges should be built according to properly prepared plans and the roads should be widened and the drags used more frequently.

DUFFERIN COUNTY

While considerable work was done by this county during the year, the greatest work was more in organizing for the future than in immediate construction. During the year, the county, through the report of a special committee, decided to change from a Township to a strictly County Road System. This marks probably the greatest accomplishment for the year and provides every reason to hope that in the future better results will be obtained than in the past. During the year five bridges were built, one on Provincial County and four on County Roads, the largest being one of 50-foot span built at a cost of \$5,875.00. No extensive road construction was undertaken during the year, construction expenses being confined to a little widening and filling of swamps, hill cutting and a number of culverts.

Township Work

All six townships retain statute labour, and under these conditions work cannot be carried on with much efficiency. A growing interest in highway work is, however, very noticeable. Road superintendents were appointed by Mulmur, Melancthon and East Luther.

HALTON COUNTY

In area this is the second smallest of all counties in Ontario, containing but 228,396 acres of assessed property. Its total assessment (1919), however, was \$17,177,210, which ranks comparatively high despite the fact that the largest of its towns has only a population of 2,880.

This county first came in under the Highway Improvement Act in 1904, and has since endeavoured to improve all its County Roads. Where local material was available this has been accomplished, but some stretches yet remain to be built in the townships of Trafalgar and Esquesing. Unfortunately, as the life of a macadam road is very limited, a large number of roads built with aid from the Department already require reconstruction. Had a patrol system been in force since their construction many more years of life would have been got out of the roads.

There are 139 miles of road on the County Road System of which 130 miles are surfaced, consisting of 4.5 miles of cement concrete, 100.5 miles of waterbound macadam and 24 miles of gravel.

The outstanding feature of construction work in this county during 1921 was the laying of four miles of concrete pavement on Provincial County Road No. 71. The chief condition which influenced the county in building this type of road was the entire lack of material in the township of Trafalgar, necessitating a haul of from one to five miles from the nearest railway. The road was graded to a width of 28 feet, and the bridges widened. The pavement consists of one course concrete $5\frac{1}{2}$ to 7 inches thick and 10 feet wide laid in the centre of the road, on each side of which is a three-foot shoulder of macadam. The concrete was poured in 50-foot sections except towards the north end where the sections were made 30 feet in length. No reinforcing was used. Exclusive of the bridges the cost of this work amounted to \$23,650 per mile. The concrete was laid by contract, the unit price for the slab being \$3.10 per square yard. So far, the road gives every indication of being satisfactory. It is the intention to consolidate and widen the shoulders this coming season.

Approximately seven and a half miles of waterbound macadam road were constructed at an average cost of \$7,950 a mile. Several long stretches of road were stoned without rolling at a cost of \$3,600 per mile. Four small bridges were built during the year. Eighty-five per cent. of the bridges on County Roads have now been built. The bridge work, however, cannot be said to be quite as good as in some other parts of the county, neither the finish nor the concrete itself being entirely satisfactory. The township system of carrying on County Road work is not in the best interest of the road system. The class of work is far from consistent, good and poor work being found close together. For instance, stone being put on the road unrolled is poor practice.

DUFFERIN COUNTY

Concrete truss bridge in township of East Garafraxa, consisting of two spans each 80 feet long.

Township Work

All four townships in this county are receiving grants from the Department and all have appointed road superintendents. Nelson is the only one, however, which seemed to be carrying out its work in accordance with the intention of the Act. The other three did not give their superintendent a sufficiently free hand or endeavour to keep him in touch with the work of the whole township. Statute labour doubtless accounts for much of this trouble, as only in Nelson has it been commuted.

A meeting held at Milton on January 11th, 1922, which was attended by the township road superintendents, reeves and deputy reeves, is worthy of note. All subjects pertaining to township work were discussed and considerable interest was shown, and it is hoped that more uniformity of work may result.

The township of Nelson constructed approximately three-quarters of a mile of waterbound macadam and a similar length of gravel road during the year. One bridge 26-foot span was built by the township of Nassagaweya.

SIMCOE COUNTY

This county commenced operations under the Highway Improvement Act in 1903. It has an assessed area of nearly a million square miles and the designated road system has a length of 461 miles, exclusive of 53 miles of Provincial Highway. In this respect it ranks second of all the counties.

Constant maintenance and a certain amount of construction have effected a great improvement in the roads, but there remains much to be done. At the present time the designated roads (exclusive of Provincial Highways) are made up of the following types:

Earth Roads 20%	Gravel 77%	Stone 2%	Other Types 1%
-----------------	------------	----------	----------------

During the past year the county and townships suffered severely from heavy storms during April and May which carried away many bridges (mostly old) and left the roads in bad shape, particularly in the southern portion of the county.

The outstanding feature of county work in 1921 was the construction of six bridges on Provincial County Roads, the largest of which, Hamel's Bridge, near Beeton, has a span of 60 feet; this was commenced in 1920. Seven bridges were also built on County Roads, the largest being one at Elmvale of 30-foot span with 20-foot roadway, built at a cost of \$4,934.32.

On road construction the only work calling for special mention is the tar penetration surface put on the road between Penetang and Midland at a cost of \$7,000 per mile. Between Orillia and Atherly a macadam road was built 20 feet in width and the surface treated with tar. The work was well done. Considerable improvement was effected on the Penetang road, also on the big sand hill north of Barrie on the Elmvale road, while on the newly designated Provincial County Road, east of Singhampton, a road diversion has eliminated a most dangerous hill.

In the towns and villages probably the best work was done on the Lake Shore road in the town of Collingwood, where a gravel road was built and given a light coat of oil. In Barrie a good stretch of macadam road was built.

The roads were maintained throughout the season in fairly good shape.

Township Work

Of the sixteen townships in this county, eight are taking advantage of the 20 per cent. subsidy, the remainder receiving Colonization Roads Aid.

A number of permanent bridges were built, particularly by the township of West Gwillimbury, where seven bridges were constructed at a cost of a little over twelve thousand dollars. The work carried out in the township of Nottawasaga was most satisfactory. The townships of Tecumseh, Essa and Flos have abolished statute labour, and a similar tendency is noticeable among the other townships. Township road superintendents were appointed by Nottawasaga, Flos, Tecumseh, West Gwillimbury and Tossorontio.

WELLINGTON COUNTY

This county has been doing work under the Highway Improvement Act since 1903. Their policy in recent years has been to concentrate on the building of permanent structures, and during the year approximately forty thousand dollars was spent thereon. No extensive road construction was undertaken but several short stretches of road were graded to the standard width and gravelled. The maintenance has been well attended to, better than in many near-by counties, and particularly where the patrol system has been adopted excellent results have been obtained. The total designated mileage of road, including the 87 miles of Provincial Highways, show the following types:

Concrete, 4 miles; bituminous, 6 miles; stone, 13 miles; gravel, 367 miles; earth, 35 miles. The township roads also show over 45 per cent. of their road mileage to have been gravelled. It is estimated that 85 per cent. of the bridges and culverts on County and Provincial County

BRUCE COUNTY ROAD

Construction of gravel road through a swampy country, on commencement of work and after completion.

Roads have now been constructed. The only unfavourable feature connected with the fourteen bridges built during the year is that the finish in several cases was very rough.

Township Work

The chief factor against the township doing effective and efficient work is that, with the exception of Guelph, all retain statute labour and only four out of twelve have appointed township road superintendents. Considerable work, however, was accomplished. Approximately \$100,000 was spent by the twelve townships and grants totalling \$19,348.49 were received from the Province. The township to accomplish most was West Garafraxa, which built four bridges costing almost \$14,000 (one of which is not yet completed). Altogether 24 bridges were built by seven townships, the aggregate cost being about \$42,000.

The condition of the township roads varied from a first-rate gravel road to an almost impassable mud track, and while a certain amount of improvement is taking place no decided benefits can be expected till the statute labour system is abolished.

TORONTO, April 15th, 1922.

W. A. McLEAN, ESQ.,
Deputy Minister of Highways, Ontario.

SIR:

I have the honour to submit a summary report of the road work carried out under the Highway Improvement Act and the Ontario Highways Act during 1921 in the counties of Brant, Haldimand, Lincoln, Norfolk, Welland and Wentworth.

These counties all showed considerable increase in their road building programme during 1921, as is borne out by the fact that their combined expenditure for road purposes was in excess of two million dollars, exclusive of what they contributed to Provincial Highway construction and what the townships spent individually on their township roads.

From observations of previous years' work, a general improvement in the standard of work is noticeable, and more systematic maintenance is being undertaken.

Several townships were added to those taking aid from the Department, and in those where statute labour is abolished a very marked improvement is seen in the standard of their work. The officials also report that much more is being accomplished per dollar expended than under the old system. Many townships now have their work under the supervision of a township superintendent.

Respectfully submitted,

J. H. HAWES,
District Engineer of Municipal Roads.

BRANT COUNTY

The expenditure on the county road system in Brant during 1921 exceeded by a considerable amount that of any preceding year since the county adopted the system. This was partly due to the purchase by the county of the Brantford-Oakland Toll Road and the immediate undertaking of a considerable expenditure thereon. The purchase price was \$23,000. The road was later designated a Provincial County Road and assumed by the Brantford Suburban Roads Commission.

The County Road System at present consists of approximately one hundred and two miles of road of which 78 miles are gravel, 2½ miles concrete, 2 miles tar penetration, and 19½ miles earth. The total mileage of roads of all classes in the county is approximately 620 miles, and of this, 300 miles have a metalled surface of some kind, 270 miles of which is gravel.

BRANTFORD SUBURBAN ROADS

There are nineteen miles of road under the jurisdiction of the Brantford Suburban Roads Commission. The largest item of construction during the past summer consisted of the improvement of about two miles on the Burford Road beginning at the railway crossing just west of the city. A thirty-foot grade was established throughout, with adequate drainage. Some slight changes in alignment were made with a view to eliminating or improving the curvature and improving the visibility. For this purpose, it was necessary at a few points to acquire some additional right-of-way. A concrete pavement 9 feet wide and 8,625 feet long was laid on the north side of the road. The pavement is 7 inches thick and was laid by day labour at a cost of \$2.93 per square yard. A 9-foot strip of gravel was put down alongside the concrete on the south side of the road. This arrangement was somewhat in the nature of an experiment, the contention being that the concrete would carry probably 90 per cent. of the traffic, the gravel being called upon to take care of the turn-out traffic. Observation during 1922 will no

doubt prove whether this scheme should be adopted or not, and if it works out as anticipated, it will enable the county to provide twice the mileage of concrete pavement.

On the Cockshutt Road it is proposed to replace the existing wooden trestles with concrete box culverts and earth fills. The culverts are completed and the first fill, consisting of about 12,000 cubic yards, is almost completed. The northern approach to the Grand River bridge was strengthened, and a new wooden floor with a tar surface put on.

Provincial County Roads

One-half mile of heavy grading was done just east of Burford Village. The grade was raised an average of two feet and widened to 28 feet. Seven-eighths of a mile of twenty-eight-foot grade was established in the township of Oakland, and one mile of similar grade in the township of Dumfries across lots 10, 11 and 12, on Road No. 103. These grades are good examples of Provincial County Road work.

County Roads

Approximately four and one-half miles of road were graded to the standard width on various county roads, with side ditches and entrance culverts complete. In addition to the mentioned work, approximately $4\frac{1}{2}$ miles of tile drain and 40 pipe culverts were laid.

Bridges

One bridge was built during the year in the township of Oakland at the south end of the Cockshutt road. This is of reinforced concrete, 12-foot span, and 20-foot roadway. Owing to the nature of the soil, 16-foot tamarack piles were used to support the bridge.

Maintenance

The chief items of expenditure for maintenance were for gravelling and dragging; \$24,176.39 was spent on resurfacing county roads, and \$3,185.32 on dragging. On the gravel roads, a tractor and grader were used for dragging operations, and these roads were kept in splendid condition during the season.

Machinery

This county had quite a large outlay for new machinery during the year, the chief units being: three stone crushers, one $3\frac{1}{2}$ -ton motor truck, one 12-ton road roller, one waggon loader, one concrete mixer and one steam shovel. A suitable house has been erected for the storing of machinery during the winter months.

Township Work

Of the townships in Brant County, one has abolished statute labour, two have commuted it, and two are on a statute labour basis. The township of Burford was the most active of any in the county with an expenditure of approximately \$22,000.00. Some very good work was accomplished under Mr. F. W. Lewis, the superintendent. Work in the remaining townships consisted of the replacing and repairing of culverts, grading and gravelling of short stretches of road.

HALDIMAND COUNTY

No extensive programme of construction was undertaken in Haldimand County during 1921. Over 40 miles of the county system were graded and ditched to the county road standard, in preparation for a surface of some sort in the future. The extensive grading work done this year should prove to be a decided improvement to the system. The alignment of the grade in many instances was greatly improved, as was the drainage in all cases.

The road from Hagersville to Selkirk, a distance of $10\frac{1}{2}$ miles, was resurfaced with crushed stone and is at present in splendid condition. A similar surface was put on Road No. 10, from Nelles' Corners to its junction with Road No. 7, a distance of about one mile. Several smaller jobs of resurfacing were done on various macadam roads, particularly on the Rainham road, the river road between Cayuga and Caledonia, the road leading eastward from York village and the Nanticoke Road. An expenditure of approximately \$3,700.00 was made on the dragging of earth and gravel roads, which were kept in comparatively good condition.

A grant of \$5,500.00 was made to the village of Hagersville for a bituminous surface on the main street, a connecting link of the County Road system.

No bridges were built during the year, but 207 pipe and tile culverts were put in throughout the system, and two concrete box culverts were constructed. Many others were lengthened to conform to the new grades.

The detour traffic from the Provincial Highway which was under construction through the county caused a heavy strain on some of the county roads and made the maintenance charges rather high on those roads.

Township Work

All the townships in the county except Rainham, Dunn and Sherbrooke took advantage of the 20 per cent. grant from the Province this year. Of the ten townships, four have abolished statute labour, one commuted, and five still retain statute labour. In most of the town-

ships a decided interest is being taken in their roads and for the most part conscientious work is being done. The townships of Oneida, Seneca, and Walpole had township road superintendents in charge of their work, and appeared well satisfied with the results.

LINCOLN COUNTY

The county road system of Lincoln at present consists of approximately 175 miles, of which approximately 100 miles have received a surface of some sort, chiefly of waterbound or tar macadam. A limited supply of gravel is obtained along the southern shore of Lake Ontario and a few miles of road have had a surface of gravel. The clay roads are in excellent condition, being constantly dragged. At the end of 1921 there were 14 miles of gravel roads, 58 miles of waterbound macadam, 22 miles of bituminous penetration, and $4\frac{1}{2}$ miles of concrete roads completed on the system.

ST. CATHARINES SUBURBAN ROADS

The suburban roads are under the supervision of Mr. W. P. Near, and the season's work consisted of 2.0 miles of concrete road, 18-foot wide, on Niagara street, and 1,800 feet of 9-foot concrete pavement on the mountain section of the Merrittville road. One-half mile of asphaltic concrete was also laid on Niagara street, connecting with the city pavement. A 20-foot span reinforced concrete bridge was built on the Martindale road over Martindale pond, with a clear width of roadway of twenty feet.

County Roads

On the country roads, 3 miles of tar macadam were built, 16 feet wide. Sixteen miles of waterbound macadam 10 feet wide were built in various parts of the county, and 3 miles of gravel were built on the lake shore road between Port Dalhousie and Niagara-on-the-Lake. Three bridges were built, one 12-foot span on Lot 1, Concession 1, Grantham; one 28-foot span on the Creek Road; and one 54-foot span over the Four-Mile Creek on the lake shore road, the expenditure on the three bridges being \$11,446.65. The average cost for penetration roads was approximately \$19,500.00 per mile for a 16-foot road. The work done by day labour was approximately \$500.00 per mile cheaper than that done by contract. The average cost for the 10-foot waterbound macadam, including grading and ditching, was \$8,560.00 per mile.

Maintenance

A well organized patrol system is in operation in this county. On the twenty miles of bituminous roads in the system, one gang consisting of three men, a team and light waggon, a tar kettle and the necessary tools, are engaged in keeping these roads in repair. The foremen of the various divisions throughout the county are furnished with stamped and addressed envelopes, one of which they mail to the superintendent weekly, with a brief report of work done, and asking for any supplies required or calling to his notice any matter which needs his personal attention.

Township Work

Every township in this county has abolished statute labour, and the work in all except the township of Niagara is under the direction of a road superintendent. Generally speaking, the work is above the average standard for the district, probably due to the fact that they have been working longer under the present system than those in other localities. The townships bordering on Lake Ontario have a problem in the protecting of the bank of the lake front road and are undertaking to protect it by running short jetties out into the lake. Where the experiment has been tried the results have been very gratifying, erosion being practically eliminated.

NORFOLK COUNTY

A total of \$435,800.20 was spent on the Norfolk County Road System in 1921, as compared with \$174,696.35 in 1920, which is an indication of the increased activity in road work in this county during the past year. The total for construction was \$165,159.32, and for maintenance \$140,288.73.

Provincial County Roads

The chief item of construction was the completion of the 18-foot penetration road between the town of Simcoe and the village of Port Dover, a stretch of approximately $3\frac{1}{2}$ miles. This gives a continuous hard surface between these two municipalities. Approximately \$8,500.00 was spent on the maintenance of provincial county roads, chiefly on grading and resurfacing.

County Roads

Approximately nine miles of road were graded 24 feet between the shoulders, and 7 miles of this received a metalled surface. From Vanessa Station on the T., H. & B., westerly and south-erly, four miles of gravel 14 feet wide and 12 inches deep, was laid. The gravel for this was

crushed, screened, rolled and watered, as for waterbound macadam. On County Road No. 9, running westerly from Port Rowan, $1\frac{1}{2}$ miles of tar penetration road was built, and on Road No. 8, 0.85 miles of stone base, 6 inches consolidated, was laid in preparation for a tar penetration surface.

Bridges

The bridge expenditure for the year was exceptionally heavy, chiefly by reason of the expensive type of bridge which the county was called upon to build over the River Lynn at Port Dover. A 55-foot bascule bridge was built here, with a 16-foot roadway and a 6-foot sidewalk. The counter weight and mechanism for lifting the bridge are encased in the east abutment, making a very neat design for this type of bridge. The total cost was \$77,344.66. A seventy-six-foot steel bridge with a 16-foot roadway, with concrete floor and abutments, known as the Dowell bridge, was built over Big Creek, the total cost being \$17,763.00. A smaller bridge of reinforced concrete, 10-foot span, known as the Ransom bridge, was built on Road No. 8, at a cost of \$1,154.00.

Machinery

The total cost of machinery purchased during 1921 was \$24,784.20. The larger items included five graders, two motor trucks and one gasoline shovel.

Township Work

With the exception of the township of Townsend, the townships in Norfolk County are not showing the interest in their roads that is generally in evidence throughout the district. This township abolished statute labour at the spring session of the council and appointed a township superintendent. Approximately 35 miles of grading of a good standard for township work was completed, and many culverts lengthened or replaced to conform to the new grades. For its first season under the new system this township made an excellent showing. In the remaining townships, the work was confined to the ordinary statute labour assessed on the rate-payers, along with the special work such as the building of a few bridges and culverts.

WELLAND COUNTY

As in most of the counties in this district, the road programme for 1921 was the largest in the history of the county, the total expenditure for the year being \$475,803.23. Approximately 17.5 miles of roads were added to the county system during the year, making the county road mileage 136 miles, exclusive of 5 miles of Welland suburban roads, and $5\frac{1}{4}$ miles of Niagara Falls suburban roads. Of the 136 miles of county roads, 2 miles are gravel, 80 miles are macadam, 0.5 miles concrete, 8.5 miles bituminous macadam, and 45.0 miles earth. From this it will be seen that 67 per cent. of the county roads have been surfaced. Of the 34 miles of provincial county roads, 28 miles are surfaced.

Provincial County Roads

On the Garrison Road between Fort Erie and the road leading into Ridgeway, 5.93 miles of tar penetration road 16 feet wide was completed. The contract price for the last 2.7 miles completed in 1921 was \$18,000.00 per mile, including grading and ditching. On the same road 6.8 miles of waterbound macadam was completed between Port Colborne and Marshville. This was built 16 feet wide and 9 inches deep consolidated.

County Roads

On the county roads, 2.6 miles of tar penetration road were built 16 feet wide. This is the Niagara Falls-Thorold road, from the end of Niagara Falls suburban road to the Thorold townline. Approximately 16.6 miles of waterbound macadam were built, 9 feet wide and 9 inches in depth, consolidated. Two miles of gravel road, 8 inches in depth, were laid in Pelham township. The total length of county road graded during the season was approximately 21 miles. A total of \$30,897.52 was appropriated in special grants to towns and villages for the improvement of streets forming connecting links or extensions to the county system. General maintenance was carried out throughout the system, the sum of \$58,793.26 being spent in the resurfacing of macadam roads, and \$8,000.00 on minor repairs. The main item of expenditure for equipment was the installation of electrical power in the Bethel quarry at a cost of \$2,500.00. This equipment has proved a splendid investment both as to efficiency and economy.

Welland and Niagara Falls Suburban Roads

On the suburban roads of Welland and Niagara Falls a total of \$36,039.25 was expended on construction and maintenance during the season, the chief item being the construction of 1.3 miles of tar penetration road, 16 feet wide, on the Thorold stone road for the Niagara Falls Suburban Roads Commission.

Township Work

The townships in Welland County have shown a marked improvement in their road systems, and in most cases are working up an efficient township road organization. All except one township are working under the supervision of a township road superintendent.

WENTWORTH COUNTY

In December, 1921, the county system in Wentworth consisted of 157 miles of County Roads and 37 miles of Provincial County Roads. The total road mileage in the county is approximately 620 miles, of which about 31 per cent. comes under the jurisdiction of the county. Only one mile of road was added to the system during the year. Of the total of 620 miles, about 44 per cent. of the roads have a hard surface and consist of gravel or waterbound macadam.

Out of an expenditure of \$252,942.92 during the season of 1921, only \$19,037.34 was expended on the construction of new roads, and \$5,063.22 on bridges and culverts. The total expenditure for maintenance and repair amounted to \$203,616.79. An analysis of these figures indicates an abnormally high maintenance charge, and in the opinion of the writer is a convincing argument in favour of some more permanent form of construction in this county, which, owing to its location at the head of Lake Ontario, is subjected to a converging traffic, with the city of Hamilton forming the centre. In order to cut down this excessive maintenance cost, a serious attempt should be made to place some form of pavement on the more heavily travelled roads radiating from Hamilton. It should be remembered, of course, that owing to the extensive programme of construction on the Hamilton entrances of the provincial highways, the other roads have been subjected to an abnormal detour traffic, from which they will be to a large extent relieved on the completion of the Provincial Highway. The only work of a permanent nature done by the county during the season was the construction of several concrete culverts ranging in span from 2 to 10 feet. The largest item of expenditure for maintenance was on the Hamilton Suburban Road between Stoney Creek and Hamilton, on which approximately \$32,000 was spent on resurfacing with crushed stone. The average per mile for maintenance of suburban roads was \$1,908.45. The expenditure on new machinery during the year was \$17,773.78, the more important purchases being a new 10-ton roller and a crusher and two bins and screens.

Township Work

The townships, with the exception of Glanford, all received Government aid on work done during the season, and on the whole did very creditable work, especially East Flamboro, Barton and Saltfleet. Their proximity to the city of Hamilton kept labour prices somewhat above the average in these townships, making the work considerably more expensive than in outlying districts. Four townships have abolished statute labour, one has commuted it and one partly commuted, while two townships are still operating under the statute labour system.

TORONTO, April 18th, 1922.

W. A. MACLEAN, ESQ.,
Deputy Minister of Highways, Ontario.

SIR:

I have the honour to submit a summary report on the improvement of the county roads during the year 1921 in District No. 7, which includes the counties of Hastings, Lennox and Addington, Frontenac, Leeds and Grenville, and Lanark, according to the provisions of the Highway Improvement Act.

During the year, in addition to the regular inspection, special visits were made at the request of the superintendents and county councils, and the advice and assistance of the Department was appreciated.

The cost of labour was greatly reduced and men were more plentiful than during the preceding years. More work of a better quality was obtained for the same outlay.

Waterbound macadam is the type of road most generally constructed in this district. The long dry spell during the early summer affected the usual convenient water supply, making good consolidation very difficult.

Respectfully submitted,

J. M. McINNES,
District Engineer of Municipal Roads.

HASTINGS COUNTY

The sum of \$71,501.63 was expended on Provincial County Roads, \$19,150.22 of this amount being spent on construction. In many cases the maintenance consisted in shaping the road with a grader, surfacing with crushed rock and consolidating with a roller. Provincial County Roads No. 22 and No. 87 pass through some very rough and rocky country, making construction both difficult and expensive. A great deal of narrow right-of-way is encountered, and until the necessary width is acquired and the fences and telephone poles moved, it will be impossible to build these roads to the required standard. That part of Road No. 22 from Bannockburn north to Bancroft is particularly rough and hilly. During the season \$29,553.40 was expended on this piece of road. The work consisted of securing better grades, widening cuts and fills,

HAMILTON-QUEENSTON PROVINCIAL HIGHWAY
Views of the road across Red Hill Creek, Saltfleet Township, before commencement
and after completion of pavement.

and surfacing with crushed rock or gravel. The method being followed is to pick out the difficult and dangerous points on the road and work on them. Steep grades, sharp turns and narrow rock cuts are quite common, many of which are being improved. This road should be carefully surveyed, so that the right location will be assured. It is expected that the traffic, particularly the summer tourist traffic, will increase as this road is improved. On Road No. 87 gravel is obtainable in several sections. Nine miles of Provincial County Road were graded.

On County Road construction \$40,363.05 were expended. This includes \$20,178.02 expended on four reinforced concrete bridges, and a retaining wall 65 feet long of reinforced concrete in the village of Stirling. Two bridges consisting of two 30-foot spans, 16-foot roadways, at a cost of \$10,931.40; one bridge of 40-foot span, 16-foot clear roadway, costing \$3,585.60; and one bridge of 30-foot span, 16-foot roadway, of reinforced concrete, at a cost of \$3,355.33 were built. Some $5\frac{3}{4}$ miles of road were graded and surfaced. The County Road between Cannifton and Corbyville was constructed of waterbound macadam 18 feet wide and the surface treated with oil. Approximately \$61,453.00 were expended on maintenance and repair of county roads, which consisted mostly in surfacing with gravel or crushed rock. Ditching, replacing and repairing culverts, dragging and patrol work were generally carried out. New machinery to the amount of \$23,134.48 was purchased, which included one complete crushing outfit, two rollers, one tractor and one grader.

Township Work

Four townships took advantage of the 20 per cent. grant. The work consisted mostly of surfacing with crushed rock or gravel. The township of Sidney built two reinforced concrete and steel bridges, one 20-foot span, one 25-foot span of 16-foot clear roadways. The township of Rawdon built three reinforced concrete bridges, one 20-foot span, one 30-foot span, and one 16-foot span, with 16-foot clear roadways. The township of Tyendinaga purchased a complete crushing outfit.

COUNTY OF LENNOX AND ADDINGTON

On the construction and maintenance of Provincial County Roads \$34,491.24 was expended. The outstanding feature of this work was the construction of a mile of road on Road No. 54 in South Fredericksburg. Extra right-of-way to give the required 66 feet was purchased, fences, telephone and telegraph lines were moved. The roadway was well graded and ample provision for drainage was made. The road is waterbound macadam, 16 feet wide and 10 inches deep. On Road No. 25 in the township of Richmond, $2\frac{1}{2}$ miles were ditched and surfaced with crushed limestone which was not rolled. The maintenance consisted mostly in resurfacing with gravel or crushed stone. In several instances the crushed stone was watered and consolidated with rollers.

Approximately \$57,142.38 were expended on construction and maintenance of County Roads. In the township of Camden East, between Colebrook and Moscow, 3 miles were constructed at a cost of \$3,017.00. This was fairly well ditched and finished with the aid of a roller. The maintenance consisted mostly in resurfacing with gravel or crushed rock. The latter in many places was watered and rolled. One small reinforced concrete arch and one bridge of 50-foot span were constructed. The steel for the latter was originally used at Kayler's bridge on the Provincial Highway, and was given gratis to the county.

The narrow right-of-way, with poles carrying power, telephone or telegraph lines in the way of construction is quite common and is a hindrance to work being carried out in accordance with the regulations.

Township Work

Four townships took advantage of the twenty per cent. grant, the work consisting for the most part of resurfacing with gravel or crushed rock. The township of Camden built one bridge, 20-foot span, 16-foot roadway, of reinforced concrete and steel.

FRONTENAC COUNTY

The work on the Provincial County Roads was confined to maintenance, consisting mostly of surfacing with crushed rock. A heavy grader drawn by a tractor and followed with a roller was used to repair macadam roads that had become rutted. In places where there was not enough material to make the crown of the road smooth, extra crushed rock was used. This appears to be an economic method in keeping a smooth surface. One reinforced concrete culvert was built and several narrow cuts and fills were widened.

On County Road work approximately \$55,986 were expended. This was divided between construction and maintenance. The construction consisted in widening cuts and fills, shaping the roads with a grader, and surfacing with crushed rock. Four reinforced concrete culverts were built, and numerous tile culverts were laid. The maintenance consisted in surfacing with crushed rock or gravel, and shaping the road with a grader, and followed with a roller. Where necessary, several culverts were lengthened or repaired.

Township Work

Three townships took advantage of the 20 per cent. grant, the work consisting mostly of surfacing with crushed rock.

UNITED COUNTIES OF LEEDS AND GRENVILLE

On the construction and maintenance of Provincial County Roads \$35,997.75 were expended. Provincial County Road No. 128 from Lombardy to Rideau Ferry was fairly well graded and partly surfaced with crushed rock and consolidated with the roller. This was rather a difficult road to construct. It was narrow, crooked, and several stretches of rock were encountered. The required right-of-way was obtained, and where rock was taken out, the material was crushed and used for surfacing. The road was straightened in many places. The work is to be completed in 1922. The work on Provincial County Road No. 129, running north from Brockville, consisted mostly in surfacing with crushed rock. Two reinforced concrete culverts were built, and one large corrugated iron pipe with end walls of concrete was put in.

On County Road work approximately \$260,000.00 were expended. Some very good grading was done, the drainage getting proper consideration. In all some \$160,000.00 were expended on road construction. Two bridges commenced last year were completed in 1921. Three new reinforced concrete bridges of 12, 14 and 16-foot spans and 24-foot clear roadways were constructed. Some \$28,500.00 were expended on new machinery, consisting of three water waggons, two rollers, one crusher, one steam tractor, one twenty-ton screen and bin, four spreader waggons, one scarifier, four small graders, eleven scrapers, and four drags.

The maintenance and repair consisted mostly in surfacing with crushed rock, and rolling. Some places where the road was badly rutted the scarifier was used and the road shaped with a grader, and rolled.

Township Work

Nine townships took advantage of the 20 per cent. grant, the work consisting mostly in maintaining the roads with crushed rock or gravel.

LANARK COUNTY

The continuation of the construction of Provincial County Road No. 83, known as the Perth-Lanark Road, was the outstanding feature, this road being completed to the village of Balderson. The grading of this road was well done. The grade at Stanley hill was reduced and the material from the resulting cut was hauled both ways to widen the roadway, and 1,000 feet of tile were laid to take care of ground water. In this particular cut and in other places that were of a springy nature, excavations were made, then filled with large stones, and blind stone drains led from these to a free outlet. Two 4' x 6' x 28' reinforced concrete culverts were built. Fifteen concrete or corrugated iron pipe culverts varying from 12 to 24 inches in diameter were laid. The road consists of a 3-inch tar penetration surface 16 feet wide, laid on a 8-inch consolidated stone base. Two and one-quarter miles were constructed at a cost of \$39,231.44 or \$17,436.00 per mile. Fourteen and one-half miles of County Road were constructed at an average cost of \$3,750.10 per mile. This work consisted mostly of shaping the road with a grader and surfacing with crushed rock. Rock cuts were widened and the material where suitable was used for surfacing, or for widening fills. The Wymess cutoff on County Road No. 3, Bathurst Township, was completed. A 40-foot span bridge of reinforced concrete and steel was constructed at Maberly. On a part of the road between Carleton Place and Almonte, on Road No. 28, a base course was constructed with a view of laying a 3-inch tar penetration surface in the near future. \$32,225.37 were expended on maintenance and repair of County Roads, which consisted mostly of resurfacing with crushed stone. A three-ton motor truck was purchased.

Township Work

Eight of the 24 townships took advantage of the 20 per cent. grant, work consisting mostly of maintenance by resurfacing with crushed rock. The township of Bathurst constructed a 30-foot span bridge, 16-foot clear roadway, of reinforced concrete and steel, over a branch of the Tay River.

MOTOR VEHICLES BRANCH
REPORT OF REGISTRAR OF MOTOR VEHICLES

W. A. McLEAN, Esq.,
Deputy Minister of Highways, Ontario.

SIR,—I have the honour to submit the following statistics of the permits and licenses issued by the Motor Vehicles Branch during the year 1920.

These statistics show in detail the number of passenger cars, commercial vehicles, motor-cycles and chauffeurs located in each city and county, as well as the occupations of the owners and the horse-power, carrying capacity and other descriptions of the vehicles registered.

Respectfully submitted,

J. P. BICKELL,
Registrar of Motor Vehicles.

APPENDIX No. 5
SUMMARY, 1921

Expenditure on Township Roads

The following schedule shows in detail the work and approved expenditure on Township Roads during 1921, and upon which Provincial subsidies were paid in 1922, under the provisions of the Ontario Highways Act.

Number of Townships	Approved Expenditure for Year							Superintendence		Total Government Grant	
	Roads and Culverts	Bridges	Maintenance	Machinery	Purchase of Gravel Pits	Approved Expenditure	Government Grant 20%	Expenditure	Government Grant 40%		
294	\$844,829 42	\$501,650 14	\$1,888,048 75	\$142,316 18	\$12,420 81	\$3,389,265 30	\$677,852 90	\$76,585 03	\$30,634 01	\$3,465,850 33	\$708,486 91

REPORT OF THE DEPUTY MINISTER OF LABOUR FOR 1921

INTRODUCTION

In submitting the annual reports of the administrative branches of the Department of Labour it may be stated that practically the whole of such administration was accomplished previous to my appointment as Deputy Minister. These reports indicate that the work of the Department of Labour, which was established in 1919, is increasing in volume and importance.

The Factory Inspection Branch, through the chief inspector, administers the Factory, Shop and Office Building Act. This Act is framed to safeguard the life and limb of workers through inspection of plants and equipment, and by having protective appliances attached to machinery and installed in buildings; to promote health and safety through effective sanitary arrangements, and to control the length of the working day and week for women and young persons.

The regulations enforced by the Steam Boiler Branch are designed to ensure the proper materials and workmanship being used in the construction and repair of steam boilers and other pressure vessels, and a staff of inspectors, under certain conditions, apply tests to determine the strength, guarantee the safety of operation and increase the efficiency of vessels in which steam, gas, air or liquid is contained under pressure. All pressure vessels whose designs have been approved and registered by the Steam Boiler Branch are constructed or repaired according to the highest standards known to engineering science.

The Stationary Engineers' Branch is responsible for the examination and licensing of engineers who operate stationary or portable steam plants. Four grades of certificates are issued and the possession of a certificate is a reasonable guarantee of the efficiency of the operator. It also protects the owners by ensuring that their plants are operated by competent persons, and consequently the safety of the public is enhanced.

The Employment Service is for the purpose of dealing with an important phase of the unemployment situation. It endeavours to secure the most reliable information regarding employment vacancies in agricultural, commercial, domestic and industrial business; it directs the applicants for employment to positions, without loss of time and with the minimum of expense: selects for the employer the person best qualified for the position offered; co-operates with the municipalities in mobilizing and distributing large numbers of workers for emergency work during abnormal periods, and gathers reliable data for dealing with unemployment of a complex character. That the Employment Service is becoming better known and appreciated is exemplified by the large volume of business which was transacted during the year.

A survey of labour conditions throughout the province indicates that the volume of employment during 1921 did not show any increase compared with the 1920 period. From reports made by trade unions in the province the average unemployed membership during 1920 was 3.55%, and for 1921 period was 9.43%

During 1920 the number of persons who registered for work at the Ontario Offices of the Employment Service of Canada was 175,925 as compared with 185,946 registrations during 1921. The number of positions offered by employers during 1920 was 172,767, and in 1921 the vacancies reported were 136,858.

Industrial depression, which was world-wide, had a considerable effect on the basic industries of the province. Development of home and export trade has been hampered by the uncertain and complex condition of the money market. In manufacturing, the textile groups experienced the greatest activity, particularly in the cotton and woollen industries, some factories having requested overtime permits. There was renewed activity in the leather industry, some factories operating full time with the usual staff. Manufacturers in iron and steel, glass, lumber and rubber show a slight decline. Bush work was not so busy as during the previous year. Activity in building and construction work was still maintained, although the estimated value of building permits was less than the former year. Reductions in cost of material and wages would probably account for the shrinkage in value.

An appreciable decline in money wages took place during the year. In the building trades a decline of 10% took place. Wages for bushmen fell 50% and practically went back to the 1913 level. In the manufacturing industries a decline as high as 25% has been reported, the greatest reductions being in the metal trades and iron and steel works. Declines of 5% to 15% took place in the textile groups and in pulp and paper mills. The printing trades have been an exception, some increases in wages taking place. Wages offered for farm workers during the summer of 1921 ranged from \$25.00 to \$45.00 per month, compared with \$40.00 to \$60.00 per month in 1920.

There has been practically no change in the number of hours worked in the various industries throughout the province.

Fifty-three industrial disputes took place during the year and of these only eleven were due to causes other than disagreement regarding wages.

During the month of August an advisory committee on unemployment was appointed to advise the Ontario Government on matters pertaining to unemployment, as a recurrence of conditions experienced during the previous year was foreshadowed by the state of trade and the condition of the labour market. The Committee advised the Government to co-operate with the municipalities and the Federal Government in providing work for the relief of the unemployed, and initiated an advertising campaign embodying a plan of co-operation between various trade interests in an effort to stimulate industry and create employment. This Department was associated with the Committee in carrying out their campaign.

Under date of October 7, 1921, the Dominion Government issued an order whereby local authorities who undertook to put in operation any necessary public works during the winter season should be re-imbursed by the Federal and Provincial Governments for a proportion of the excess cost over normal cost of such undertakings. The normal cost had to be borne by the municipality and the excess cost over and above normal would be shared equally by the municipality and the Dominion and Provincial Governments. A later order issued by the Dominion Government increased the Federal proportion of excess cost from one-third to one-half, the cost of the Provincial Government remaining the same and the municipal proportion of excess cost being reduced to one-sixth.

Supplementing these measures the Dominion Government agreed to refund one-third of the disbursement actually made by the municipality for the relief of the unemployed, conditional upon the province and the municipality participating equally.

Special provision was made by the Dominion Government for dealing with ex-service men in necessitous circumstances due to unemployment. The Dominion Government agreed to assume one-half of the total cost of relief given to unemployed ex-service men, the remaining one-half being borne equally by the province and the municipality.

The representatives of various municipalities had a conference with the Government relative to providing work and giving assistance to those in necessitous circumstances due to lack of employment. It was agreed that in the first instance every effort would be made by the municipalities to provide work in accordance with the Federal-Provincial-Municipal scheme, and the work of drafting and enforcing regulations to deal with the disbursing of unemployment relief throughout the province was undertaken by this Department. In previous years this work was carried out by the Department of the Provincial Secretary.

The Government was represented at the Third General Conference of the International Labour Organization of the League of Nations, held in Geneva, Switzerland, from October 25th to November 19th, by the Honorable W. R. Rollo, Minister of Labour. He was appointed to the commission dealing with technical agricultural education and the right of agricultural workers to membership in labour organizations.

J. H. H. BALLANTYNE,

Deputy Minister.

LABOUR LEGISLATION, 1921.

THE STATIONARY AND HOISTING ENGINEERS ACT, 1921.

Important amendments extend the operation of the Act to include gas plants in addition to steam plants. The definition of "steam plant" is revised to include steam pumps, while "hoisting plants" take in those used for portable or industrial work. The Act is made applicable to stationary steam plants of 25 horse-power and over instead of 50 horse-power and over as previously, and to steam heating plants with safety valves set at over 10 pounds instead of 20 pounds as previously. Locomotive engines on chartered railroads are eliminated from the scope of the Act and hoists in quarries are brought under it. The issuing of certificates to operate plants is limited to British subjects and for those who have the necessary residence qualifications for becoming Canadian citizens and have made application for naturalization papers. A new emergency clause has been adopted which provides that any person may perform the duties of an engineer for fourteen days during the absence of an engineer for any reason other than dismissal, but at the end of that period a properly qualified engineer must be employed.

Other amendments make more severe penalties for impersonation at examinations or for operating without a certificate.

THE FACTORY, SHOP AND OFFICE BUILDING ACT, 1921.

The principal amendment to the Factory Act provides for bringing the Act into conformity with the Adolescent School Attendance Act. This means that no child under the age of sixteen years will be permitted to work in a factory, shop or office without a school permit. The age at which a child may be employed in a shop is raised from twelve to fourteen years. The providing of seats for female employees, which was previously compulsory in shops, is made compulsory in factories and offices where, in the opinion of the Factory Inspector, a substantial portion of the work can be efficiently performed while seated.

A further amendment provides for the compulsory closing of any class of shops in any municipality for a weekly half-holiday.

THE DEPARTMENT OF LABOUR ACT, 1921.

An amendment to the Trades and Labour Branch Act gives the Lieutenant-Governor in Council power to create Provincial and Local Employment Service Councils. The purpose of these councils is to act in an advisory capacity to the Government Employment Service.

THE MINIMUM WAGE ACT, 1921.

The amendment authorizes the Minimum Wage Board to suspend or vary any of its orders in accordance with changed conditions in any industry or establishment and to vary its orders for the same industry in different localities.

THE MOTHERS' ALLOWANCES ACT, 1921.

The Mothers' Allowances Act has been broadened to include the mother who has been deserted for five years, and the mother with one child under fourteen who has also a child over fourteen or a husband who is permanently disabled. A grandmother, sister, aunt or suitable foster mother who has the care of two orphan

children and inadequate means to support them is now eligible for an allowance. Most important provision has been made for the handling of cases which do not come strictly within the terms of the Act by which the Lieutenant-Governor in Council, upon the recommendation of the Commission, may grant an allowance to a needy case. This clause is very important and far reaching and will cover a number of deserving cases for which provision could not otherwise be made. Negotiations may now be entered upon for reciprocal arrangements between Provinces for the payment of allowances to mothers moving from one Province to another. Probably the most striking change in the Act, however, is the clause raising the age limit to sixteen years, to conform with the Adolescent School Attendance Act.

RESOLUTION RE LABOUR LEGISLATION CONFERENCE.

As there is some question as to whether certain subjects which are of vital interest to labour are matters for Dominion or Provincial legislation, the Provincial Legislature passed a resolution calling for a conference of representatives of the various governments of the Provinces and the Dominion Government, at which would be discussed such matters as the eight hour day, unemployment insurance, old age pensions etc. and a decision arrived at as to just where the responsibility for enacting legislation along these lines lies. At the conclusion of the conference the Department of Labour is to investigate and report upon those subjects which are provincial in scope.

ONTARIO GOVERNMENT EMPLOYMENT BUREAUS

EMPLOYMENT SERVICE OF CANADA

GENERAL SUPERINTENDENT, H. C. HUDSON

The conclusion of another year's activities in public employment work in this province finds the Ontario Employment Offices of the Employment Service of Canada continuing to serve ever broadening circles of industrial and community life. Although the offices have, of necessity, devoted a large portion of their efforts towards various phases of unemployment relief work, the fact that the primary function of a public employment service is not relief but employment has been constantly emphasized.

No phase of the work has been more promising than the development of the farm employment work during the year. There is a natural reluctance on the part of the employer in rural districts to place a definite order with a definite statement of wages in a public employment office. Lacking the opportunity of interviewing the applicant who will be sent him, the farmer is inclined to evade the question of the wage to be paid until the worker has arrived "on the job." He would prefer to place the order with the proviso that he "will pay what the man is worth." Experience has indicated however, that such orders are virtually impossible to fill, the applicant refusing, as a general rule, to travel any distance to obtain a position where he has no guarantee of at least the minimum remuneration which he will receive. No more striking proof of the growing confidence shown towards the service on the part of both the employer and the employee may be given than the fact that farm placement work consistently increases in volume in direct proportion to the publicity which the work receives.

The Toronto office naturally handles the major portion of the farm placement work and particulars of the results accomplished by this section will be found on page 13.

The following table of farm wages covers about 80 per cent of all orders for farm help received at the Toronto Office from May to October, 1921. In the majority of other orders received no definite wage was stated, although there were a few, principally for boys, in which the offer was less than \$20 per month.

An analysis of these 2110 orders shows that 192 were for married couples and 1918 for single men. Fifty-three of the requests for married couples were on a yearly basis at wages ranging from \$150 to \$700 per year, \$600 being by far the most frequent offer. The employing farmer has found that this type of labour makes for continuity of help through the busy seasons and is on the whole more satisfactory, particularly where a separate house can be provided.

Offers for married men by the month ranged from \$30 to \$80 per month, the prevailing rate being around \$50.

Very few offers were made for single men on a yearly basis. By the month single men were offered from \$20 to \$60, one one hundred dollar a month vacancy being reported. The majority of the orders ranged from \$25 to \$40 per month as compared with \$35 to \$60 during the previous year.

It also appears that wages steadily declined during the summer of 1921, the most frequent wage in May being \$40 per month, in June and July \$35, and in September and October \$30.

TABLE I. WAGES OFFERED FOR FARM LABOUR

TORONTO EMPLOYMENT OFFICE, 1921

(1) Married Couples

Wages	May	June	July	August	Sept.	October	Total number of orders
\$450.00 per year.....					2		2
500.00 " ".....	3					1	4

50.00 " ".....	2	3	14	2	2		23
60.00 " ".....			3				3
100 00 " ".....			1				1

Because of the industrial situation there was a marked falling off in the number of orders placed by employers during the year ending October 31st, 1921 as compared with the previous twelve months. A corresponding reduction in the number of placements in regular employment is seen in table II, while the number of casual positions offered—i.e. those of less than one week's duration—shows an increase which may be attributed, in part at least, to appeals made throughout the province for "odd jobs for unemployed workers."

On page 15 will be found a table which compares by four week periods, the placements made by the employment offices during the past two years on the basis of relationship between registrations and placements. This table reflects the changes in the industrial situation during the twenty-four months under examination.

During the four weeks ending Nov. 27, 1919, for example, 80.8 per cent of all applicants who registered at Ontario Employment offices were placed in positions. This relatively high percentage was followed by a decline—largely due to seasonal and climatic conditions—during the months from December to March. The improvement, which commenced early in April 1920, continued throughout the balance of the fiscal year, with the result that the relationship of registrations to placements during the entire twelve months stood at 71.7%.

From November 1920 to March 1921 there was a marked decrease in the number of placements made, followed by a slight but consistent improvement throughout the remainder of the fiscal year. It will be noted from the table, however, the average for 1920-21 is 58% which is 13.7% lower than the figure for the previous year. The normal efficiency of a public employment service probably lies midway between these two points, as the demand for workers was abnormal in 1919-20 and subnormal in 1920-21.

No attempt has been made in this report to provide detailed information with regard to the work of the individual offices. On pages 23 to 28, however will be found the report made by the superintendent of the Toronto office. As the office in Toronto is the largest in the province, the outline of its activities furnishes the best possible example of the wide service rendered by an efficient public employment office.

In the report of the Toronto superintendent will be found a brief summary of the attempts which are being made to solve the problem of the handicapped adult worker, and the equally difficult problem of the proper placement of boys and girls entering industry.

THE LABOUR MARKET IN ONTARIO, 1920-21.

The general labour situation during the two years ending October 31, 1921, as indicated in reports from the Ontario Offices of the Employment Service of Canada is shown graphically in Chart A, in which applications, vacancies and placements are plotted by four week periods.

The most significant of these curves is the one showing the trend of vacancies reported by employers. In brief, the demand for labour, after a short period of seasonal slackness during the winter of 1919-20, increased steadily during the spring of 1920, reaching a peak in May when 18,373 vacancies were reported for the four weeks ending May 14. From May 1920 to April 1921 there was a rapid and fairly steady decline, with the exception of September and October when there was an increase due largely to the early commencement of bush operations. From April until the end of October 1921 there was an alternate rise and fall in demand, but the general trend has been upward.

In Chart B the trends for the two fiscal years can be compared period by period. It will be noted that at no time during 1921 were as many vacancies reported as for the corresponding period in 1920. In fact it was not until October 1921 that the vacancies exceeded to any extent those of the lowest period of 1920, which was during the month of January.

A more detailed analysis of the decline from May 1920 to April 1921 shows that the depression was widespread. In the manufacturing group it is most noticeable in iron and steel and other metal products, lumber products, leather, rubber, textiles, pulp and paper. Building and construction work was very quiet. As previously stated the improvement in September and October 1920 was due largely to the early commencement of bush work, which was suddenly curtailed about the end of the year, throwing large numbers out of employment. The mining industries took the same course, many requests for importation of labour being received in the early fall of 1920, followed by great reductions in staffs during the winter.

A gradual increase in demand for labour from April to October 1921 was experienced in the manufacture of pulp and paper, lumber products, textiles and leather products. Bush operations during the fall of 1921, were on a small scale compared with those of 1920.

It will be seen from the placement curve that placements during the two years followed to a considerable extent the same trend as vacancies. During 1920, however, the two curves are widely separated, while in 1921 they almost coincide, indicating that during the latter period practically all vacancies reported to the Employment Service were being filled.

The application curve as a whole cannot be taken to indicate conditions as accurately as curves of vacancies and placements. For instance during the winter of 1920 the Federal Emergency Appropriation for the Relief of Unemployed Ex-Soldiers required "no-work" certificates from the Employment Service, which greatly increased the number of applications during that period. Similarly in 1921 the Unemployment Relief Scheme was probably responsible for many applications for work which would otherwise not have been received, as the majority of the municipalities participating in the relief plan required all applicants to register at the local office of the Employment Service.

EMPLOYMENT CLEARANCE

As one would expect, employment clearance activities during the twelve months ending October 31st., 1921 show a decline proportionate to the decline in the total number of placements as compared with the previous twelve months.

In 1920, clearance placements—that is to say, placements made outside the zones of the local offices—totalled 10,407. In 1921 the figure was approximately 35% lower, or 6,784. It is interesting to note, however, that the number of men sent to points outside the province in 1921 was 1,189, as compared with 1,120 in 1920. This is explained by the fact that the falling off in orders for bushmen in the Province of Quebec was offset by a special arrangement for the placement of Western Harvest workers through the Employment Service of Canada, in Sept. 1921. After the regular so-called Harvesters' Excursions had been run, there still remained a demand for workers in Northern sections of Alberta and Saskatchewan and this demand was met by the co-operation of Eastern and Western offices of the Employment Service, approximately 572 men being sent from the Province of Ontario.

The greatest volume of employment clearance business between different offices in Ontario was handled during the four weeks ending November 27, 1920 when 1,102 workers were transferred. The majority of these placements were made in connection with the lumbering and pulpwood cutting industries in the northern section of the province.

The Toronto Offices show the greatest activity in matters of clearance during the year, with 2682 transfers to other parts of the Province, and 642 transfers to other Provinces of the Dominion. Ottawa is second on the list with 1,187 intra-provincial and 414 interprovincial transfers. North Bay, the gateway to the mining district, shows 618 placements through the clearance system within Ontario, and 414 to other Provinces. Because of its strategic location from the point of view of lumbering, Pembroke sent 462 men to positions outside the Pembroke district.

Below will be found tables showing details of the Employment Clearance work.

Space does not permit a detailed description of the work done by each one of the twenty-five employment offices in the Province, but the report of the Toronto City Superintendent and Zone Clearance Officer, Capt. C. W. E. Meath is given in full on the following pages. It covers the operations of the most important office in the Province, if not the Dominion, and a study of its various activities reveals the extent to which a public employment service is linked up with many phases of community life and individual existence.

REPORT OF OPERATIONS CARRIED ON BY THE
EMPLOYMENT SERVICE OF CANADA IN TORONTO
NOV. 1st, 1920, to OCT. 31, 1921.

The period from Nov. 1st, 1920 to Oct. 31st, 1921, was the hardest year in which the Employment Service has operated in this City. There were 81,419 individual applications for employment in the Toronto office, and 41,160 people referred to positions during the year. Business depression set in in the Fall of 1920, and continued throughout the entire year with the result that at no time did our number of unplaced applicants go lower than about 3,000, and at times the figure exceeded 15,000. The Employment Service has come through the most severe test possible and so far as Toronto is concerned, we feel that we are in a stronger position than ever before. This has been brought about by the co-operation of various organizations owing to the unemployment problem and by the centralization of employment work in this office in order that the situation might be efficiently handled.

The strain on our organization has been severe and we have been able to meet each contingency as it arose because of the earnestness and loyalty of the staff and the support of the various bodies with whom we have had to deal in this work. The co-operation of the Board of Trade, the Manufacturers' Association, the members of the Rotary Club, the U.F.O., the Neighborhood Worker's Association, the Welfare Section of the Department of Public Health, the Soldiers' Aid Commission, The G.W.V.A., the G.A.U.V., the Trades and Labor Council, Labor Unions, Army and Navy Veterans, Salvation Army, House of Industry, the Police Department, Social Service Council Church of England, have all helped us in meeting the conditions of distress which have been the result of the great unemployment prevailing during the year.

The number of vacancies dropped off during the Fall of 1920, and conditions became so bad that a system of relief was inaugurated whereby the Federal, Provincial and Municipal Governments each assumed one-third of the cost. The relief consisted of groceries, food and fuel to married people, and meal tickets to single men. The relief was furnished by a temporary staff operating at a building at the corner of King and Church Streets. The applicant first registered at our office for employment. If no employment was available, we furnished him with a relief card which entitled him to the relief. The responsibility for investigating each case was placed upon the Municipal Department of Health. Nurses visited the homes regularly and furnished the necessary information to the Relief Station and to this office, as to conditions there.

The chart which is shown in this report, (page 29) will show to what extent this relief was taken advantage of as the number of applicants for employment was at its peak during the operation of the relief.

The City also furnished relief work during the Winter of 1920-21. Over 800 men were employed in the parks for three days per week, and these men all came from this office. The extra work in connection with this and with the relief, was a serious strain on every member of the staff, but a spirit of cheerfulness and willingness existed and at no time were we unable to cope with the situation.

In the month of February 1921, a Handicap Section was formed. In May 1921, a Professional and Business Section was formed, and in August 1921, a Boy's Department. These are each referred to later in this report.

Manufacturing in Toronto during the past year has been very dull. The slump in rubber, metal and woollen industries resulted in the closing down of such large plants as Massey-Harris Co., Canadian Allis-Chalmers, Goodyear Tire Co., Dunlop Tire Co., and others. The building trades have been busy all summer, and since the taking over of the Street Railway by the Toronto Transportation Commission on Sept. 1st, 1921, about 2000 men have been engaged in relaying the tracks and roadbeds. However, this work as well as building, is drawing to a close as the cold weather sets in.

There has been a great falling off in the number of men employed for the bush this year as compared to former years. Last year \$60 and \$70 per month was offered and enough men could not be secured. This year from \$26 to \$32 for fully experienced men is offered and only a few picked men have been taken. The railways have done very little work and practically no relief has come from this source. There are so many men unemployed in the North that we have had little chance to get men out of Toronto to any construction work which has been in progress.

The textile and leather trades probably recovered sooner than any other lines and are fairly busy this Fall. Lumber products have been very dull and furniture factories have cut down their staffs considerably.

The farming industry felt the depression first and was probably as hard hit as any. The drastic drop in the price of farm products and the bad crops experienced in this district have placed the farmer in a position of uncertainty during the past season and as a result the wages paid farm help have been cut, as compared with the previous year. Our connection with the farmer in this Province is shown best by the figures following this report, but the co-operation of the farmers with this office has helped the situation in this city very materially.

We have lately issued a bulletin twice a month describing some of the applicants registered at this office. We send this to a list of about 200 employers in Toronto. Comments on this plan which have reached us from time to time show that employers did not realize the class of applicant who registers here. A good many had the idea that common labour was about the limit of our ability to help them. We have had splendid results from the issue of this bulletin and when times improve, I am sure this will prove to be an important feature of our business.

The policy we have pursued in connection with the building up of this service in Toronto, has been to give satisfaction to the employer. This is the only safe and permanent way to carry on our business and sending a man to a job just because the man needs work, is not satisfactory as the employer loses confidence in us. The applicant is always available but the job is not, and if we serve the employer well, we will have continued business from him and in this way alone can we help the applicant. We sometimes have unreasonable applicants who do not appreciate this and who demand that they be sent to certain jobs but we would rather have any trouble we must have with the applicant than

with the employer. Employers are seeing that by using a central Employment Office, waste is eliminated and they are furnished the best possible medium for obtaining high class help free of charge.

During the Spring of 1921, a very strong movement among returned soldiers for a separate Employment Office for ex-service men only, was started in Toronto but after some few weeks of conference etc., the matter was amicably settled and we now have the undivided support of all ex-service men's organizations.

One outstanding feature of the unemployment situation in the City of Toronto during the past year, has been the number of newly arrived immigrants principally from the industrial centres of the British Isles. These people flock to the cities and Toronto seems to have more than its share. There are a great many ex-Imperial soldiers in this class, who have come out from Great Britain under the Overseas Settlement scheme. They stay in Toronto and will not leave the city. There is also the immigrant who came out here to go on the land and did so for a short period, but at the first opportunity they come in to Toronto. This has been a serious problem to contend with. If these people could be moved out of the cities it would relieve matters. We do our best here to carry on a steady system of propaganda trying to induce these people to get out of the cities into the country, but it is most discouraging. However, we are succeeding in this work to some extent.

In addition to the actual work of employment, this office has been a centre for information of all kinds during a year of very distressing conditions. Immigrants arriving in Toronto come to the Employment office seeking all sorts of information. Ex-service men come here for information as to Pensions, etc., and we have made it a point to satisfy as far as possible, any enquiry on any subject pertaining to the work of the different Government Departments.

MEN'S INDUSTRIAL SECTION

In the Men's Industrial Section we had 40,155 applications and placed 9,907 in positions. There were 13,106 vacancies reported in this section. In the Spring of 1921, it was found that many large out-of-town construction jobs which we had been depending on to relieve the situation, did not materialize and this left a large supply of mechanics in the city. These men who could not secure work in their various trades, accepted such jobs as were available, handymen, labourers, etc.

The larger building and construction jobs in the City were the new King Edward Hotel, the Live Stock Arena, the rehabilitation of the Street Railway.

Employers have availed themselves of our Provincial Bulletin during the past year, and we have had many complimentary remarks on the service we render the public through our Clearance system.

The experiment tried out early in the summer of having one member of the staff report at the office at 7.45 a.m. in order to pick up early orders phoned in, has proved entirely successful and this early service is appreciated by applicants as well as employers.

There was a noticeable increase in the number of railway workers registered during the Fall of 1921, engineers, firemen, etc., having been laid off after years of steady service owing to general reductions of staffs.

A scheme was worked out whereby members of the staff of this Section visited a number of industries from time to time, in order that they might see the actual conditions under which people are employed and in this way be able to act intelligently on an order when received from manufacturers. This proved an efficient plan of educating our placement officers.

MEN'S PROFESSIONAL AND BUSINESS SECTION

The Professional and Business Section was organized on May 1st, 1921, in order that men able to fill the higher class positions in organized business, should be given the proper attention in this office. A better standard of jobs coming into this office has been the result, and in normal times we are prepared to function efficiently on the higher type of worker who did not visit the office formerly because no hope was offered to him in his search for employment. The Bulletin which we issue every two weeks has helped this Section probably more than any other. The vacancies at present being offered are mostly for salesmen on a commission basis, but we have had a great demand for male stenographers and bookkeepers combined. This last has been due to employers laying off a male bookkeeper and female stenographer and employing one male to do the work. This has occurred frequently during the past few months.

To give an idea of the class of men we are placing, the following are some of the placements made:—

Assistant Superintendent at	\$4,200 per annum.
Efficiency Expert at	3,750 per annum.
Gas Plant Superintendent at	3,250 per annum.
Salesmen at	2,600 per annum.
Mechanical Engineer at	2,000 per annum.

CIVIL SERVICE SECTION

The Civil Service Section has now been discontinued owing to the action of the Federal Civil Service Commission in taking this work out of our hands. During the short time the Section was in operation, we had 719 applications and placed 190 in the various Federal Departments in Toronto. We have had the assurance of the Post Office, the Customs House, the Inland Revenue Office, the Income Tax and the Public Works Departments, that our efforts were most satisfactory and efficient during the time the Employment Service had this work in hand.

MEN'S FARM SECTION

This Section was very busy during the past year. The great amount of unemployment in the City forced men with farm experience to look for outside work, with the result that we had 6,786 applications and placed 5,695. The severe drop in wages during the year made it a hard matter to explain to men seeking farm work, that the farmer was up against a hard proposition in the greatly decreased prices which he received for his products. Experienced men were getting \$35 to \$40 per month during the past summer, and the average winter wage will be about \$20 to \$25 per month. A great number of newly arrived immigrants were placed through this office.

HEAVY LABOUR OUT-OF-TOWN SECTION

The number of applicants during the year have been: Labour, 3,838. Bush, 1,276, and the number of placements: Labour, 3,231, Bush, 1,054. On account of the Hydro completing their work at Niagara, the small amount of track work done by the railways, and practically no lumber mills running, this Section has

been severely handicapped. Our chief clients during the past year have been the Hydro Electric Power Commission, Department of Highways, Canadian National Railway, Canadian Pacific Railway, Spanish River Lumber Company, R. B. Herron Lumber Company, Mickle Dymont Company, Graves Bigwood Company, etc.

MEN'S HANDICAP SECTION

This Section has been in operation since April, and has a total registration of 500 men, divided roughly as follows:—

Injuries to legs and arms	230
Medical	120
Old age	65
Weak sight or hearing	35
Mental cases	50

We have been assisted in this work by the Association of Mental Hygiene who have diagnosed our Mental Cases and the Provincial Department of Health who have diagnosed a great many of our Medical Cases. Experience shows that a great majority of these handicaps have already received the best medical treatment obtainable through hospitals or other institutions, and that the problem of the handicapped men is industrial and not medical.

From an industrial point of view the outstanding fact is that 60% of our handicapped men are unskilled labourers who can no longer do labourers' work, and training in some suitable occupation seems the only solution to the problem. A detailed study of each handicapped case would be the necessary preliminary to any system of retraining, but this Section, at the present moment, does not possess the necessary facilities for such work.

Situations for handicapped men are very difficult to obtain at any time, but it is a hard problem at such a time of general unemployment as at present. Altogether we have referred 86 cases to positions since opening the Section.

BOYS' SECTION

Ever since the Provincial Employment Bureau commenced operations, the boys between 14 and 18 years have been grouped with the men under their respective occupations. This method has been found unsatisfactory because of the general industrial inexperience of boys of these ages. The boys also felt out of place and neglected. A separate section for these boys was started Sept. 10th, 1921, with a registration of 25 boys. After we had transferred our boys' cards from other sections and with additional registrations we have on Oct. 31st, about 400 boys registered. The results of this experiment have been very satisfactory and there is every indication that a Juvenile Section will be successful and useful in the Employment Service.

WOMEN'S INDUSTRIAL AND CLERICAL SECTION

There were 893 placed in the Women's Industrial Section during the past year. In spite of the depression throughout the year the placements were 200 more than the previous year; 375 different factories placed orders with this Section.

There were 1,554 placed in the Women's Clerical Section. 485 different offices placed orders with the Section. Besides stenographers, bookkeepers, clerks, etc., fourteen women with University standing or special training were placed in positions which were classified as "Professional" with initial salaries ranging from \$1,000 to \$1,500 per annum.

WOMEN'S FARM SECTION

413 Women were placed in this Section. Fourteen applications for camp permits for fruit farms were received and dealt with. Each camp was inspected.

WOMEN'S HOUSEWORKERS' SECTION

Permanent placements in this Section for the year were 2,938 as compared with 1,997 for the year before. Casual placements were 11,843. The situation at present shows that the demand for cook-generals cannot be met, and the need of a training school for this class of worker is very great. Employers refuse to take factory workers into their homes to train them as house-workers. During the year 250 British houseworkers have been placed. Some of these paid their own passage from Britain and some war-workers were granted transportation. While it is our policy to try to induce immigrants of the houseworker's class to remain in Canada, yet it is certain that a number of them go on to the United States as soon as their legal term expires. Some have admitted that they have endeavoured to join their friends there before the year was up, but were turned back at the border.

1921

1920

CENTRAL ONTARIO CLEARANCE SECTION

The Clearance Section has worked quite efficiently during the past year and is one of the sections of the Employment Service which is thoroughly appreciated by the employer. The number of men cleared for outside trade has been small compared with the previous year, the reason being that work at the pulp mills, lumber camps and general construction has been very dull.

In connection with persons transferred to the summer hotels and resorts, it sometimes occurs that where people have been satisfactory the previous year, the employer engages these people direct, without reference to our office and in this way a number of orders are lost to us.

A complete chart follows, showing the relative proportions of the different groups dealt with through Clearance.

NEW SYSTEM OF REGISTRATION

During the past few months we have gone through our files and cancelled any duplications in our registrations. We have thoroughly rearranged our filing system so that there will be no duplications. When a new applicant approaches the registration desk we look for his name in the alphabetical file no matter whether he says he is registered or not, and in this way prevent any new duplicate registrations. This will make our records more accurate and information secured from the office will be more reliable. The registration cards are also made out in detail and more care is also given the filling out of the employer's request cards.

Chart - E

CONCLUSION

In conclusion, I wish to call attention to the faithful service rendered by the members of the staff of the Employment Service of Canada in Toronto. There is no other public work as hard on the nerves or bodies of Civil Servants as this work during the past year. The constant strain of not only the employment work, but the unrest and unsettled state of affairs which has to be combatted

every day in this office, is a severe test on the efficiency of the staff here. Business men visiting the office have remarked on the cheerfulness of the members of the staff and the constant and effective work which is done in assisting to meet a situation such as the country has never known before.

C. W. E. MEATH,
Superintendent of Toronto Office.

UNEMPLOYMENT RELIEF

During the year fifteen municipalities in Ontario participated in the Federal Government's plan for relief due to unemployment. Excluding Toronto, 5,516 cases were assisted by the government for periods ranging from a few days up to about three months. In Toronto 4,830 cases were taken care of between January 15 and April 12, making a total of 10,346 cases reported for the Province. In table VIII will be found a list of the municipalities which found it necessary to undertake relief, also the extent of the work.

TABLE VIII

Municipality	Number of Cases
Brantford	301
Cobalt	7
Etobicoke Township	85
Hamilton	3,899
North Bay	3
Oshawa	178
Paris	5
Port Arthur	173
Peterboro	139
Scarboro Township
St. Catharines	124
Stratford	114
*Toronto	4,830
York Township	441
Windsor	47
	10,346

* January 15 to April 12, 1921.

An analysis of relief cases in those places from which complete data could be secured is presented in the tables which follow. As only partial information could be obtained for Toronto, Port Arthur and Stratford, these places are not included in the analysis.

In table IX, 5,229 applicants for relief are classified according to country of birth. Of these 1,847 or 35.3 per cent. were Canadian born while 48.8 per cent. were from the British Isles, divided as follows:—

TABLE IX. ORIGINS OF RELIEF APPLICANTS

Origins of Ontario Population	Relief		Cases
Country of Birth	Percentage	Number	Per cent. of Total
Canada	79.9	1,847	35.3
England	9.2	1,933	37.0
Scotland	2.6	480	9.2
Ireland	2.0	137	2.6
United States	2.2	57	1.1
Continental Europe	3.4	654	12.5
Other countries7	121	2.3
	100.0	5,229	100.0

It will be seen that 37.0 per cent. were from England, 9.2 per cent. from Scotland and 2.6 per cent. from Ireland. About 15 per cent. had their origin in non-English speaking countries, 12.5 per cent. being from Continental Europe.

Although slightly over one-third of the relief cases were those of Canadian born, the number per unit of population was relatively small. Relief cases were much more numerous among our British born population, nearly 50 per cent. coming from this group, which constitutes only about 14 per cent of our population. A considerable number of those other than Canadian born were recent immigrants, 587 being in Canada less than one year, which means that they arrived about the time the industrial depression was setting in and were not in a favourable position to cope with unemployment.

The fact that so many of the British born required relief is also partially accounted for by the fact that many of them have set up homes for themselves in the suburbs of the cities. They have been striving to become owners of their homes and the advent of unemployment soon brought them to the limit of their financial resources. This condition was particularly evident in York Township where two-thirds of the relief cases were English, Irish or Scotch.

In table X the relief cases are grouped according to the number of years they have lived in Canada. The small number of cases from two to six years is accounted for by the small amount of immigration during the war period.

TABLE X

Number of Years in Canada	Number of cases
Life	1,847
1	586
2	120
3	22
4	35
5	36
6	24
7	122
8	262
9	317
10	345
Over 10	1,513
	5,229

In table XI the relief cases are classified according to the usual occupation of the applicants. It will be noted that almost 50 per cent belong to the unskilled labour group while only 25 per cent were formerly employed in some line of manufacturing, and this during a period when factory work was very scarce.

TABLE XI

Occupations	Number	Per cent. of
		Total
Building	459	8.8
Commercial	117	2.2
Personal Service	186	3.6
General Labour	2,575	49.2
Manufacturing	1,317	25.2
Technical	13	.3
Railway construction and operations	11	.2
Farming	16	.3
Miscellaneous	535	10.2
	5,229	100.0

These figures would indicate that the unskilled worker is not in as good a position to meet an industrial depression as those who have learned a definite trade or occupation. The operation of the Adolescent School Attendance Act will tend to reduce the number who ultimately find themselves in this group. One method of attacking the problem at its source would appear to be along educational lines, and the co-operation of schools and industry should be utilized to the fullest extent to lead boys into the line of work for which they are best adapted. This function could probably be performed best through the medium of a juvenile Employment Service.

DURATION OF RELIEF

Whenever relief was applied for the case was investigated and the applicant was obliged to secure a certificate from the local office of the Employment Service of Canada (or from some local organization) to show that employment was not available. When relief was in the form of provisions, only one week's supply was granted at a time. Further requests had to be accompanied by a certificate of unemployment.

TABLE XII

Number of weeks	Number of cases	Per cent. of cases
1	1,935	37.0
2	768	14.7
3	555	10.6
4	389	7.5
5	297	5.7
6	220	4.2
7	216	4.1
8	169	3.2
9	151	2.9
10	121	2.3
Over 10	408	7.8
	5,229	100.0

It will be seen from table XII that only a small number of cases received assistance over long periods, over 50 per cent. being for two weeks or less, while 37 per cent. were aided only once. This is accounted for by the equitable distribution, through Government offices and local relief organization, of any available work.

On the following page will be found tables showing the country of birth of heads of families assisted, their occupations, duration of relief and length of time in Canada of those who are not of Canadian birth.

The following tables show the country of birth of heads of families assisted, their occupations, duration of relief and length of time in Canada of those who are not of Canadian birth.

EMPLOYMENT AGENCIES ACT

In 1914 there were 98 private employment agencies in Ontario. In 1921 the number had been reduced by the competition of the Ontario offices of the Employment Service of Canada and by legislative restriction to 16. Of this number, 4 were nurses' registries, operating in Toronto and filling a need not met up to the present time by any branch of the Employment Service.

During the year ending October 31, there were no convictions under the Employment Agencies Act. A number of complaints were investigated and adjustments brought about by departmental officials.

Two agencies were closed voluntarily by the license holders, those of J. Andreejuk of Sudbury and J. Warnock of Arnprior.

Below will be found a complete list of the licensed Employment Agents in Ontario as at October 31st, 1921. No other agencies or persons are authorized to receive or demand any fee, reward or other remuneration for any assistance they may render in the matter of placing men or women in employment.

J. T. Reid—104 Simpson St., Fort William.

J. B. Weller—North Bay (Box 353).

B. Ferro—North Bay.

P. H. Wright—160 Canal St., Ottawa.

Alex. Emond—Mattawa.

J. C. Stewart—192 Park St., Port Arthur.

A. St. Denis—Sudbury, Ontario (Box 654).

A. E. Woods—Sudbury.

Misses Buckingham & Boyle—158 Cumberland, Toronto.

G. C. Burnham—66 Church St., Toronto.

Miss E. M. McMullen—233 Robert St., Toronto.

Miss A. Geldard—159 Madison Ave., Toronto.

H. A. Lay—Room 40, Yonge St. Arcade, Toronto.

R. Verity—169 Simcoe St., Toronto.

R. C. Wood—190 King St., Toronto.

INSPECTION OF FACTORIES, SHOPS AND OFFICE BUILDINGS

Chief Inspector: JAMES T. BURKE.

Office: Spadina House, Spadina Crescent, Toronto.

DISTRICT INSPECTORS

R. Albrough, 25 Grosvenor Ave., Sault Ste. Marie: Mr. Albrough's district is west to the Manitoba boundary line: east, including Manitoulin Island, Sudbury and North Bay to Quebec boundary line.

G. H. Bostock, 87 Glebeholm Blvd., Toronto: Mr. Bostock's district is old C.P.R. lines east to Sharbot Lake: G.T.R. lines north including Peterborough but excluding North Bay.

H. Bourne, 57 Francis St., Hamilton: Mr. Bourne covers all districts in the Province of Ontario for the purpose of investigating foundries.

W. T. E. Brennagh, 221 Maple Ave., Hamilton: Mr. Brennagh's district is G.T.R. main line west to London (exclusive); east to Niagara Falls, south and east of London and Port Stanley lines; north C.P.R. and G.T.R. to Crumlin and Tavistock, but exclusive of Milton, Branchton and Ingersoll Junction.

H. A. Clark, 238 Dufferin St., Toronto: Mr. Clark's district is City of Toronto, east side of Yonge St., and west of Don River: north, including Leaside and South including a portion of Toronto Island.

W. S. Forster, 336 McLeod St., Ottawa: Mr. Forster's district is east of North Bay, Algonquin Park and K. & P. Railway.

Miss Hamilton, 225 Bagot St., Kingston: Miss Hamilton's district is Kingston, K. & P. Railway, north and east to the Quebec boundary line.

A. W. Holmes, 39 Lakeview Ave., Toronto: Mr. Holmes' district is City of Toronto, east and south of Lansdowne Ave. and Bloor St., west to Burlington, north to city limits: east including York St., University Ave. and Avenue Road; south, including a portion of Toronto Island.

R. Hungerford, 434 Shaw St., Toronto: Mr. Hungerford's district is City of Toronto, west of, but including Lansdowne Ave. and Bloor St., also West Toronto, Lambton, Milton, Branchton, but excluding Drumbo, Stratford, Gowanstown and Fordwich: north to Southampton, Bruce Peninsula, Owen Sound, Collingwood, Meaford, Penetanguishene, and both C.P.R. and C.N.R. lines including Orillia and Elmvale but excluding Sudbury.

S. J. Mallion, 74 St. Vincent St. Stratford: Mr. Mallion's district is Fordwich, Gowanstown, Stratford, St. Mary's, London, St. Thomas, and Port Stanley: south and west to border line, including Ingersoll Junction on the C.P.R. and North, including Teeswater, Kincardine, and Goderich.

Miss Ogilvie, 118 Centre St., St. Thomas: Miss Ogilvie's district is Port Dover, Simcoe, Woodstock, Tavistock, Listowel, Teeswater, west, south and north to Lakes Huron and Erie, and River St. Clair.

Mrs. Reddick, 437 Crawford St., Toronto: Mrs. Reddick's district is City of Toronto, east side of Yonge St., north and south to city limits: West Toronto: G.T.R. Main lines to Shakespeare, Palmerston, Southampton, Sudbury and North Bay; G.T.R. main lines east, but exclusive of Kingston and stations on the K. & P. Railway.

H. Stevenson, 60 Hambly Ave., Toronto: Mr. Stevenson's district is City of Toronto, east side of Don River: north and south to city limits: east G.T.R. and C.P.R. to Kingston, inclusive.

Mrs. Shaughnessy, 29 Park Road, Toronto: Mrs. Shaughnessy's district is City of Toronto, north and south to city limits, from west side of Yonge St. (inclusive): west to Stratford and Port Dover Railway south of G.T.R. main lines to Lake Erie, excluding West Toronto.

H. J. Tutt, 39 Atlas Ave., Toronto: Mr. Tutt's district is City of Toronto, west side of Yonge St., to York St., but excluding York, University Ave. and Avenue Road to Northerly limits: south including portion of Toronto Island.

A. J. Wright, Preston: Mr. Wright covers all districts in the Province of Ontario for the purpose of investigating polishing plants, etc.

The work of this Branch during the year 1921 compares favorably with that of previous years. Routine inspections have been increased and a general survey of conditions in foundries and polishing plants in this Province has been undertaken.

Owing to trade conditions many industries were temporarily, some definitely, closed down or were working with reduced staffs.

As might be expected, in view of the general industrial situation throughout the Dominion, there was not a great number of new business buildings erected during the past year. However, plans for 70 new buildings and for extensions to 54 existing plants were submitted for approval during the year, in addition to a large number of drawings for fire-escapes which had been ordered by our Inspectors.

Generally, these plans showed substantial compliance with the spirit of our Act, although, in most cases some changes were required before they could be approved. In the majority of instances, these changes were necessary in consequence of insufficient or poorly located means of exit in case of fire—a subject which, too often, is evidently not given much consideration until the arrangement of the remainder of the building has been decided upon.

Increased inspection has entailed a larger amount of clerical work, and in addition to the general correspondence, 4,789 letters confirming orders issued by our Inspectors were written, as well as "follow up" letters.

Compliances have, on the whole, been satisfactory, and outstanding orders are well in hand.

TABLE No. 1.

	Year 1920	Year 1921
Total Inspections	13,812	14,349
1st "	8,613	8,713
2nd " or re-visits	5,199	5,636

Employees in above industries, mercantile establishments and office buildings inspected, numbered 238,472.

TABLE No. 2.

Year	Males over 16	Males 14-16	Females over 18	Females 14-18	Children under 14	Total
1920	189,760	2,694	72,644	8,547	281	273,926
1921	162,275	1,651	69,740	4,775	31	238,472

Birth Certificates were required and secured for employees of doubtful age, 365 in the year 1920 and 94 in 1921.

Orders issued dealing with the various requirements of the Act totalled in the year 1920, 7,431; in 1921, 7,254.

OVERTIME PERMITS.

There is again a decrease in the number of applications for overtime permits this year, as shown in the following table.

TABLE No. 3.

Year	Regular Sec. 34	Sec. 69	Bake Shop Sec. 70	Total
1920	203	47	250
1921	96	96	192

Owing to the large amount of unemployment, permits were reluctantly granted, and were only issued after thorough investigation as to the necessity, and when it was found that experienced help could not otherwise be obtained.

Fourteen Contract Clothing Permits under Section 52 were issued as compared with 125 in the year 1920.

PROSECUTIONS.

Proceedings were taken in four cases for failure to comply with the requirements of the Act as follows:—

To provide elevator gates	1 case.
“ erect fire escape	1 case.
“ have shop cleaned and put in sanitary condition.	1 case.
“ repair and make premises habitable	1 case.

In all cases convictions are secured.

COMPLAINTS

One hundred and seventeen complaints were received during the year 1921, and 63 or a little more than 50% were sustained.

Subjects of complaints are shown in the table below

TABLE NO. 4.

Year	Heat	Elev.	Fire Protection	Child Labor	Hours of Labor	Sanitation	Exhaust System	B'Yrs	Toilet Accommodation	Ventilation	Safety	Miscellaneous	Total
1920	12	8	5	20	15	18				12		27	117
1921	22	9	5	8	9	2	9	14	19		9	11	117

ACCIDENTS.

There is a decrease in the number of accidents reported during the past year, 4013 being reported, 46 of which were fatal, compared with 5185 in 1920 with 55 fatal.

Two fatalities were from natural causes, the others were due:—

To elevators	6
“ machinery and its connections	11
“ falling substances	3
“ suffocation	2
“ cars and engines	4
“ falls	3
“ cranes and derricks	5
“ burns and scalds	4
“ gas fumes	1
“ cart shaft	1
“ drowning	2
“ electricity	2

Injuries and causes of all accidents are shown in tables appended. Particulars of fatalities are as follows.

Orazio Borghese, employed by the Algoma Steel Co., Sault Ste Marie, was killed instantly by a quencher car which came down from Battery. Was caught between hopper and electric locomotive.

A. S. McDonell, an employee of the Algoma Central & Hudson Bay Railway Co., Sault Ste. Marie, dropped dead—cause, heart disease and not from any injury.

Albert Deschamp, an employee of J. R. Booth, Ottawa, died from burns received while working on oil switch. Screw driver caused short circuit.

Lionel Sanctuer, also employed by J. R. Booth, Ottawa, was drowned, was running on the boom and slipped off into river.

G. McFadden, an employee of the Canadian Pacific Railway Co. Smiths Falls, sustained injuries while repairing car, from which he died; he removed sheathing supporting car door, allowing door to fall, crushing him beneath it.

C. E. Poole, an employee of Canadian Car & Foundry Co., Fort William, was found dead between tracks; neck and arm broken. Cause unknown.

John Laliberte Jr., employed by Hawkesbury Lumber Co. Ltd. while leading horse by the head was rammed by end of cart shaft.

Fred G. Stroud, employed by the Benjamin Electric Manufacturing Co., Toronto, was caught by elevator and skull was fractured.

John Kay, employed by Massey-Harris Co., Toronto, fell off elevator between 5th and 6th floors, dropping on the cement at base of shaft.

George Pond, an employee of the Sunbeam Lamp Co. Ltd., Toronto, was crushed when elevator descended.

Leonard Pipher, employed by Toronto Municipal Abattoir and Cold Storage Co. Toronto, was caught in revolving shafting above, and instantly killed; started work with torn overalls.

George Hurst, employed by the Canadian Allis-Chalmers Ltd. Toronto, died from injuries received when crane carrying sand from pit opened up allowing contents of bucket to fall on his head, fracturing skull.

William Price, another employee of above firm, died from effects of gas fumes from oil storage tank.

Hector Dubois, of the Dominion Sugar Co., Ltd., Wallaceburg, was caught between car and cab of locomotive crane and killed.

Samson Kennedy, an employee of St. Mary's Cement Co. Ltd., St. Marys, fell from high platform alighting on head, which caused death.

Daniel McLaughlan, employed by St. Marys Flax Company Limited, died from shock, result of foot being caught in scutching knives; leg was broken and lacerated.

Wesley Garrod, an employee of Wilson Canadian Co. Ltd., Chatham, fell into scalding vat. He took an unusual route; tried to take a short cut by crossing over the end of vat which is seven feet above walk provided for employees.

John Hull, employed by Canada Cement Co. Ltd., Belleville, died from injuries received when he was crushed between draw heads of box cars while coupling.

Wm. Pearce, an employee of the Pedlar People Ltd., died from burns. He slipped forward when dipping rods into hot tank, splashing solution over chest arms and abdomen.

Wilma London, an employee of the T. Eaton Co. Toronto, was crushed between elevator and floor.

Daniel C. Doxsee, employed by Samuel L. Purdy, Coe Hill, was struck by piece when pulley burst and lung was punctured.

Fred. Manso, employed by American Cyanamid Co., Niagara Falls, was struck over head by crane. Skull and ribs were fractured and chest bone cracked.

Mike Manyk, employed by Canada Cement Co. Ltd., while repairing clutch was caught and pulled around shafting.

Patrick Shannon, an employee of the Canadian Steel Foundries, Welland, was caught between body of derrick and carriage sustaining injuries from which he died. He climbed up when derrick was swinging without operator seeing him.

John T. Bishop, employed by Canadian Westinghouse Co. Ltd., was seized with acute abdominal pain while helping pour a mould. Internal hemorrhage causing death.

Jno. J. Knight, employed by the Coulter Wood Products, Ltd., Hamilton, was suffocated while removing shavings from bin.

John Ogden, also employed by Gartshore-Thompson Co. was struck by casing when hook attached to same came out and allowed it to roll over on him.

E. Brooks, an employee of the Dominion Foundries and Steel Co., Hamilton, died from burns when pouring wood alcohol into pot: In some way it ignited and container exploded.

Joseph Duggan, employed by Frost Steel and Wire Co. Ltd., Hamilton, died from injuries received when crane, through shearing of king pin, dropped from track.

Robert Holmes, employed by Gartshore-Thomson Pipe & Foundry Co. sustained injuries from which he died. While lowering casing in pipe pit, it caught on side of pit causing hook to come out and casing to fall. He was knocked down into pit.

Robt. McCoy, an employee of Morrow & Beatty Ltd., Matheson, while working in trench was struck on head by piece of falling plank causing concussion of the brain.

Charles Olich, an employee of the National Steel Car Co. Ltd., Hamilton, was caught between side of car and steel which was being loaded: steel tipped back crushing head.

At the Ontario Paper Co's. plant at Thorold the following fatalities occurred:

A. F. Beattie fell while climbing box car, and fractured skull.

John Semonych, while turning switch was caught between car and coal crusher.

Govertical Hancheruk, while removing logs from stock pile to conveyer was struck on head by log which slipped from top of pile and skull was fractured.

Wilfred Mills, was caught in drive belt underneath machine and killed instantly.

John Sibiski, employed by Pilkington Brothers Ltd., Thorold, was found dead, was putting in a switch to start motor and is supposed to have taken hold of the blade instead of handle.

Walter Payne, an employee of the Provincial Paper Mills Limited Thorold, was caught in elevator and skull fractured.

S. R. Grant, employed by the Fort Frances Pulp & Paper Co. Ltd., Fort William, was drowned. While returning to the camp for dinner pushed canoe out of safe into quick water and went over rapids.

A. G. Miller, employed by Fort William Paper Co. Ltd., was electrocuted. Put hand on handle of auto starter to start motor which drives slasher saw.

John Wozniak, employed by the Provincial Paper Mills, Port Arthur, was caught in gears of whipper on wet machine and drawn in. Died from injuries.

John Divett, an employee of the Spanish River Pulp & Paper Mills Co. Espanola was suffocated. While loosening coal in chute was carried down with it and buried.

Adrien Gauthier, employed by the Spanish River Pulp & Paper Mills, Sturgeon Falls, was drawn around pulley when motor was started. Was sitting or presumably asleep on bottom ply of belt behind motor.

Thos. Johnston, employed by the Forbes Co. of Hespeler, fell when gang plank was in some way pushed back off sill, and received injuries from which he died.

Lesh Monilo, employed by the Ontario Malleable Iron Co., Oshawa, was struck by part of emery wheel which broke and he died from injuries received.

Flay Weese, an employee of the Canada Cement Co., Point Ann, while standing on new cement butment was struck on head by driving belt.

SAFETY SUGGESTIONS AND STATISTICS

A SAFETY IDEA—PUBLICITY.

The inauguration of a permanent policy of publicity by the Department, having for its object the stimulation of employers of labour to a decisive stand for the prevention of accidents, or the reduction of accidents to the lowest possible level.

Not many years ago those men who advocated the study of methods for accident reduction as offering a distinct possible saving in manufacturing costs were looked upon, to a more or less extent, as being demented. The soundness of their belief however has been proven so conclusively as to be beyond question, and to-day accident reduction and the protection of workmen constitutes part of the permanent policy of every progressive industrial concern on the continent.

But there still remains a good deal of missionary work to be done, particularly in the smaller manufacturing plants where only a few men are employed, and in a good many cases where the management labour under the mistaken belief that the size of the factory does not warrant an active "Safety First" policy, not realizing how much is possible even by getting home the fact of "Acting Safety," "Thinking Safety," and "Talking Safety." To drive home to manufacturers the significance of this movement, which is unquestionably here to stay, is a cause well worth taking up, because accident reduction is still in its infancy, and owing to the necessity of bringing home to manufacturers what is possible in the way of accident reduction, both from the standpoint of the workers and the economics resultant from the prosecution of such a policy, the following suggestions are offered.

(1) Pamphlets drawing attention of manufacturers to the following points; How does percentage of accidents compare with, say five years ago? What reduction, if any, has been made? Analyze assessment made by Workmen's Compensation Board—what does it show?

Is part of the assessment returned because accidents are below the assessment level, or is a second assessment levied because the accidents are over the 100 per cent. mark? If the latter is the case then no time should be lost in adopting a "Safety First" movement, but if the former is the case the question then arises as to what percentage of reduction has been effected. Has the percentage reached the lowest possible level? This can be determined by comparison with the results achieved by other companies, three typical cases are quoted hereunder:—

(a) From an Ontario manufacturing company—

In 1920—571 accidents (lost time) representing 10,772 days of lost time and costing \$95,722.73 in compensation.

In 1921—174 accidents, representing 2985 days of lost time, and costing \$32,089.60 in compensation.

In 1921 the number of men employed represented a reduction off 33% over 1920, and the number of accidents were roughly 69% reduction over 1920.

(b) Another Company, employing 2500 men.

In 1916—769 men injured and lost time.

In 1917—371 " " " " "

In 1918—124 " " " " "

In other words five sixths of all accidents were eliminated in three years. Five years ago this firm was paying \$35,000 to cover loss of time etc, from accidents. In 1918 the total cost of compensation was \$4,500.

(c) Another Company, whose works includes coal, mines, logging camps, sawmills, railroads, steel mills, foundries, machine shops, and twine mills. During the past five years experience in accident prevention work, deaths from accidents have been reduced 60 per cent. In some of the larger plants, deaths and serious injuries have been reduced more than 75 per cent. and in the steel mills, employing 1300 men, deaths and serious injuries have been reduced 88 per cent. with a corresponding reduction in compensation costs due to injuries and lost time.

(2)—DANGEROUS PRACTICES.

Two-thirds of all accidents are attributable to Dangerous Practices, which include want of instruction, want of thought, and perhaps more than all, want of proper appreciation of danger. The solution for this is in a thorough "Safety First" movement, which must dispel the workmen's and managements' apathetic attitude towards accidents, and inculcate in them the "Safety First" spirit.

(3)—DANGEROUS PLACES.

One-third of all accidents are the result of machinery, and authority has it that one-third of this number could be eliminated by machinery adequately guarded. To offset this, necessitates legislation together with thorough factory inspection. Much might be done by the use of Bulletins showing, we will say, on the one side an exposed gear, and on the other, one suitably guarded, then literature explaining the necessity of guarding gears regardless of the position they occupy, and citing cases where accidents have resulted from what was apparently a "safe set of gears." This could be supplemented at periodical intervals by similar Bulletins on pulleys, fly wheels and driving belts, set screws, sprocket wheels and chain, rolls and knives, punch presses, grindstones and emery wheels, wood-working machinery, etc., etc., also by Bulletins on removal of guards for repairs, etc., and failure to replace them when repairs are completed, and by Bulletins defining functions of "guards," such as the following, set forth in the report of the British Industrial Safety First Conference:—

(1) It should prevent access to the dangerous part so long as the danger exists.

(2) It should be constructed of such materials and in such a manner as to withstand the wear and tear to which it is likely to be subjected.

(3) Wherever practicable it should form an integral part of the machine and have been considered in its design.

(4) It should, where necessary for intermittent dangers, be automatic in action.

(5) Its removal should not be necessary for the purpose of lubricating parts of the machine or the material under operation, or for changing belts, gears, etc.

(6) It should not introduce any fresh risk or accident.

(7) It should not be so hinged or hung as to be easily opened or removed when frequent adjustments and alterations are necessary, but in such cases should not be easily removable from the immediate neighborhood of the machine.

(8) It should not interfere unduly with the output of the machine.

Suitable posters representing the results of minor injuries where no medical treatment was given, and also the results from septic cases, and amplifying these with other posters pertaining to "Safety First."

Accident prevention has been treated here under three broad headings the first being the means by which manufacturers can be induced to adopt the "Safety First" movement. It is an obvious fact that where an industry is operated primarily for gain, any appeal that is going to be made must point out some monetary gain which will accrue from the adoption of this move and it is with this object in view that some practical suggestions for educational propaganda are given in Section 1. The second heading "Dangerous Practices" is subject matter where the active support of the management has been enlisted, and the best practical means of coping with this has been the forming of "Safety First" committees. The third heading "Dangerous Places," is covered by legislation and factory inspection for guarding machinery considered dangerous, and also by "Safety First" committees in plants for the removal of obstacles etc.

BOILER INSPECTION

<u>\$12,316 47</u>	

In comparing this year's report with that of 1920 it will be observed that there is a slight decrease in the number of new boilers constructed, and also of boilers sold or exchanged for use within the province of Ontario; this is due to the recent slackening of industrial activities. With this exception there has been a steady increase yearly in the amount of work accomplished by this branch of the Department since the enforcement of the Steam Boiler Act in 1913.

A great deal of time has been given to surveying designs of vulcanizers and other pressure vessels, which has been brought about by the ever-increasing demand for this equipment in connection with the automobile industry.

Numerous complaints have been received from Canadian manufacturers and dealers in steam boilers and other pressure vessels that there is and has been a large number of pressure vessels shipped into Ontario for which drawings have not been submitted for approval and given a registration number. In every case reported an investigation has been made, and when necessary an inspection, the allowable working pressure fixed and the certificate issued.

In a number of cases the vessels were found not constructed sufficiently strong to withstand the pressure for which they were sold, and the reduced pressure fixed by the inspector was not sufficient for the purpose desired. This of course created a hardship on the purchaser, who in a large number of cases was not aware of the requirements of the Steam Boiler Act. It will be a difficult matter to avoid trouble of this description in the future unless some arrangements are made with the Federal authorities at the points of entry to notify this branch of the Department when shipments of pressure vessels are made, and to whom they are consigned. This violation of the Steam Boiler Act is most unfair to our Canadian manufacturers who have submitted their designs of pressure vessels for approval and paid the prescribed fees and received their registration numbers.

Special attention has been given to welding by the Oxy-acetylene and the Electric processes. One manufacturer proposed placing on the market boiler tubes which were oxy-acetylene welded, and forwarded samples for testing purposes. The necessary tests of expanding tube in tube plate were made and proved a failure; the crushing and folding tests also failed, which clearly indicated that this method of manufacture is useless for boiler practice.

Considerable welding of high pressure steam pipe lines has been undertaken, and although the regulations do not cover work of this description it is found expedient to accept this method of welding when high pressure mains have to run underground for long distances inside tile or other conduits. All such pipe arrangements must be submitted for approval, and the work of welding done by persons whose skill and reliability in this class of work are known, because many operators are experiencing trouble due to the lack of knowledge of metals and the principles of contraction and expansion. Up to the present time very satisfactory results have been obtained with the work accepted.

A manufacturing firm in Hamilton required for special purposes a boiler of a peculiar construction, made up largely of pipes, and although this type of boiler is not recommended, a special permit to install one was granted and same will be under observation for at least one year, and the result of the operation of same noted for future guidance.

Although there has been a number of explosions of boilers, air tanks, and hydro-pneumatic tanks only two have been reported to this office, on account of the Steam Boiler Act not demanding such accidents to be reported.

On November 17th, 1920, a boiler near Melbourne, Ont., exploded, completely wrecking the plant. The explosion occurred early in the morning after the attendant had fixed the fires and was away from the boiler. This boiler was sold for a steam working pressure of 135 pounds and was supposed to be working at 120 pounds. It had been rebuilt, and the notification of repairs or re-sale had not been forwarded to the Department. If the requirements of the Steam Boiler

Act had been complied with, and the inspection made, a maximum steam pressure of only 85 pounds would have been allowed, using a factor of safety of 5.5 in our calculations.

On September 7th, 1921 one boiler exploded five miles from Mitchell, resulting in the complete destruction of same but fortunately no person was around at the time of the explosion.

There was also an explosion of one ordinary gasoline barrel fitted up as an air receiver, which wrecked the electric motor and air pump.

Numerous boilers and other pressure vessels have been inspected on which safety valves had not been fitted. The inspectors ordered valves of the proper type and dimensions to be installed, but owing to the present wording of the Steam Boiler Act there is no way of following up the work of removal or installations of second-hand boilers. This also applies to new boilers because, after they have been finally inspected and leave the place of manufacture, the Department has no jurisdiction over them, unless they are extensively repaired or are resold.

Owing to certain pressure vessels that were manufactured in the United States and shipped in large quantities into Canada not figuring up to requirements, the different dealers were notified that they must not be sold without being covered by a certificate issued from the Boiler Inspection Branch. Shortly after this ruling, the manufacturers' representative visited the Department and stated that our laws were too rigid, and requested that tests be conducted on some of their pressure vessels. This was done and five tanks were selected from several hundred, three of which were welded by the oxy-acetylene process and two by the electric process. The first three tanks failed before reaching the pressure figured according to our calculations, using a factor of safety of 5. The electric welded (Thompson process) tanks withstood a high test pressure, and from the tests it was deduced that the strength of the seam welded by this process was 74.5% of the solid plate. A ruling has been made that welding by oxy-acetylene shall be prohibited where the plates are in tension, because the tests indicated clearly that this method of welding cannot be relied upon. The electric welding (Thompson process) will be allowed 65% of the solid plate when calculating the allowable working pressure on air receivers.

This clearly demonstrated that our rules and regulations were far from being too stringent, and the manufacturers quite agreed and they are now quite willing to design tanks that will be shipped into this province in a manner to meet with our requirements.

REPORT

OF THE

MINISTER OF EDUCATION

FOR THE YEAR 1921

To His Honour,

HENRY COCKSHUTT, ESQ.,

Lieutenant Governor of the Province of Ontario.

Your Honour,—

I beg leave to present the Report of the Department of Education for the year 1921.

The educational situation in the Province is satisfactory. Notwithstanding the fact that the economic and social forces of the time are not wholly favourable, the progress made by the elementary and secondary schools of Ontario has been substantial and continuous. Public interest has shown no signs of flagging. The readiness of both rural and urban communities to enter upon necessary expenditures has been remarkable. The attendance of pupils has improved and is now better than in previous years. The salaries of teachers have risen. The professional training schools are well attended and the supply of teachers is not inadequate. Although the burden of general taxation on account of necessary purposes is heavier, a generous policy toward the schools has not ceased. All these factors are matters for gratification, as showing that the Province maintains unimpaired its historic zeal for education. Our system of education is not bureaucratic. The powers conferred by the Legislature upon the central authority are checked by the large measure of self-government assigned to the school boards. Such a division of control has been challenged, but it ensures activity and interest by the people at large and confirms every year the wisdom of making our educational machinery as democratic as possible. During the trying years that have passed since the close of the war it has been manifest that without popular concern for education, the administrators of the system would not have accomplished alone the advances secured by the co-operation of trustees and teachers. This includes the efforts made by such organizations as the Women's Institutes, the Canadian Red Cross Society, the Home and School Clubs, etc. to all of which bodies the thanks of educationists everywhere are due.

Educational Conferences

During 1921 the meetings and conventions held to stimulate the public interest in education have been numerous. Noteworthy among them was the Imperial

Conference which met in Toronto in August, and was well attended by representatives from Great Britain and the outlying states of the Empire. The gathering was officially recognized by the Ontario Government and the delegates spoke in appreciative terms of the hospitalities and receptions arranged for them. The reports of the proceedings which have since appeared in the educational press, at home and abroad, furnish evidence of the usefulness of the conference. Ontario was represented at the meeting held at Winnipeg, in the month of October, to consider the question of children needing special care. The purposes of this conference were to discuss all questions involved in the administration of laws relating to the protection and care of children: to attempt to secure uniformity in these laws and in the methods of their administration and enforcement so far as possible, and to effect co-operation among departments charged with the administration and enforcement of these laws and with other agencies operating in the field of child welfare. The presiding officer was Dr. Helen MacMurchy of the Federal Bureau of Child Welfare, and an organization was formed for the whole Dominion to establish closer associations between the professional and volunteer workers in this valuable branch of activity. It may be mentioned also that a conference of Ministers of Education, Superintendents and Deputy Ministers from all the Provinces will meet by invitation in Ontario during 1922, to confer upon subjects of common interest and to consider, especially, the plans for a gathering designed to be held in Toronto at Easter, 1923, under the auspices of the National Council of Education. To this meeting, it is believed, will come many persons of distinction who have devoted their time and talents to the general welfare of education.

Growth of Schools

The progress of our schools is illustrated in the statistics appearing in this Report. They relate chiefly to 1920. The total number of elementary schools has increased to 6,801, and the enrolled attendance to 564,972. This is an increase of more than 18,000. The enrolled attendance in rural schools has improved by nearly 5,000 pupils and was in 1920, 226,444. The average attendance also increased in that year, in both rural and urban schools, and while the complete figures for 1921 have not yet appeared, there is no doubt the improvement in attendance has not only been sustained, but enhanced.

The Position of Teachers

The steady advance in the position of the professional teacher recorded in recent years continues unchecked. This is especially true of the rural schools. The supply of adequately trained teachers is encouraging and, excepting in remote schools, which are not easily staffed, even at high salaries, by teachers holding professional certificates, it is demonstrated that the salary scale is the real index to the whole situation. As to salary, the following table sets forth the facts for the years 1919 and 1920:

	1919		1920		Increase	
	Male.	Female.	Male.	Female.	Male	Female
Rural Schools	\$ 807.	\$663.	\$1,059.	\$ 868.	\$252.	\$205.
Urban Schools	1,780.	991.	1,964.	1,146.	184.	155.
All Schools	1,348.	817.	1,575.	1,000.	227.	183.

Furthermore, as an incentive to the teaching body, those with higher certificates command the better salaries. The number of men in the elementary schools is slightly over ten per cent. of the whole, but it is satisfactory to note that the

number tends to increase and the present attendance in the training schools for the current school year emphasizes this point.

Cost of Elementary Schools

In school property an enormous sum of money is now invested. The total value of elementary school sites, buildings and furniture, was \$60,823,454 in 1920, and the value of the equipment was \$2,276,197. This is an increase of \$10,866,164 in sites, buildings and furniture, and of \$249,178 in equipment. The Legislative Grants to these elementary schools in 1920 was \$1,612,837, an increase of \$296,308 over the previous year. The amount paid in teachers' salaries advanced by about \$3,000,000, or from \$10,160,399 to \$13,070,038, while the total expenditure increased by \$6,364,885 and reached the grand total of \$25,216,512. The cost per pupil of enrolled attendance increased from \$34.49 to \$44.63. The relation between the high cost per pupil and the small attendance in too many schools is of course evident.

Rural Organization

The whole question of schools with a few pupils in attendance is not merely a financial problem, but one of educational efficiency as well. Efforts are being made in many localities to deal with the condition by arrangements to convey the pupils from one section to another. This is not always practicable. In many cases the true remedy is consolidation, but this is a voluntary measure and must be left to the good sense and enterprise of the people themselves. Nor will consolidation work everywhere, and the adoption of measures to deal with each particular case calls for the exercise of wisdom, patience and knowledge. There are about 5,000 one-teacher schools in the Province. It is not yet generally recognized how many of them have an entirely inadequate average attendance and to what dimensions the problem has attained. The statistics for 1920 are of great significance:

Schools with 1 pupil	6
" " 2 pupils	24
" " 3 "	46
" " 4 "	71
" " 5 "	98
" " 6-9 "	641
" " 10-14 "	1,140

These and other considerations have led the Government to appoint a Director of Rural School Organization, an officer who will make a thorough examination of the situation in its various aspects, and with the co-operation of other administrative officials and inspectors, propound, for consideration, plans to deal with a condition produced by many factors, economic and social, and by the changes incident to the growth of a long-settled Province. The new Director is Dr. W. J. Karr, whose instructions are to develop constructive plans after investigating the question on all its sides; to confer with the rural authorities in all parts of the Province; to make a special study of individual and exceptional cases; to take charge of the promotion of consolidation of rural schools; and to investigate conditions wherever advanced courses are not now sufficiently provided by neighbouring high schools or continuation schools. This is a large programme, but in carrying it out on a comprehensive and adequate scale the most pressing needs of education in rural Ontario will be met.

In his report the Chief Inspector of Public and Separate Schools, Dr. Waugh, cites the figures, produced at a meeting of western school trustees, showing the

cost per pupil in the state systems of the various Provinces in 1919. These statistics may well be reproduced here:

Saskatchewan	\$60 79
British Columbia	58 73
Alberta	52 89
Manitoba	46 34
Ontario	38 73
Quebec	34 65
New Brunswick	21 54
Nova Scotia	19 60
Prince Edward Island	16 25

The Chief Inspector's comment (in which I concur) is: "The very considerable increase in the school grants paid in Ontario since that time has resulted in large advances in the salaries paid teachers, and this would greatly modify these figures so far as this Province is concerned. But even these advances would fail to justify the criticism sometimes made by the uninformed that the costs of education here are excessive. In 1920, a year later, the cost per pupil in Ontario was still only \$47.57."

Vocational Instruction

There will be found in the attached report of Dr. Merchant, Director of Industrial and Technical Education, a convenient and impressive summary of the progress made, during ten years, in vocational instruction generally. The special problems that have arisen during this development are also set forth: The difficulties of constructing the courses of study; the task of the teachers in these schools; the need of linking up apprenticeship agreements with vocational training; the relation between technical and industrial courses; the provision of professional training for instructors. The working out of these and other matters inseparable from the evolution of new types of instruction presents a great opportunity in education. As the Director states: "The schools are finding for themselves an established place in the educational system of the Province. On the industrial side they are providing for the young people who are to enter industry the essentials of a good academic education, and at the same time furnishing a special training in the subjects and operations which are fundamental to the trades and industries in which they are to be employed." In the allied branches of vocational and industrial instruction, Ontario has been making steady advances. The financial support, from three sources,—provincial, federal and local,—has been adequate, and the conditions laid down in order to secure this support have ensured the establishment of schools only where they are needed and only of the type required in each locality. The federal grants to technical education are in strict accordance with the agreement made between the Province and the Dominion, so that wasteful or unnecessary expenditures are guarded against. The total amount of the federal payments on this account in 1921 was \$344,956. The instruction of teachers for these forms of instruction,—essential to their permanent usefulness and efficiency,—has hitherto been carried on in summer schools, but something of a more thorough and systematic character being required the Province should go forward at once to the establishment of a college of professional training for this purpose. This policy is now under consideration for immediate and definite decision.

Arising out of the present situation in relation to the operation of the Adolescent School Attendance Act are questions which also press for speedy action. The conclusions of Dr. Merchant in this respect call for careful consideration:

“The most important of these is the establishment of part-time courses for those who hold home permits or employment certificates under this Act. As has been pointed out from time to time in my reports, part-time courses of instruction have been voluntarily organized in co-operation with industries in several of the day technical schools. But after September, 1922, all school boards in urban municipalities with a population of 5,000, or over, must make provision for the establishment of part-time courses, and all young persons between fourteen and sixteen years of age, who are at work, must attend school at least four hundred hours per year. After September 1923, the same municipalities must extend their courses to give instruction to workers between sixteen and eighteen years of age for three hundred and twenty hours per year.

While the responsibility for establishing these courses rests with the municipalities, the Department of Education must be prepared to give direction and assistance to boards and advisory committees. As a matter of fact, all the steps that have been taken in the direction of establishing vocational classes and schools have had in view a permanent organization which would provide satisfactorily for compulsory part-time courses as well as for full-time instruction in academic and vocational subjects. Classes established and maintained under the Vocational Education Act will be found, as a rule, most suitable for all workers who have reached the fourth book standard of the public school, because all part-time courses of study, planned under this act to meet the needs of employed boys and girls, must provide instruction in the subjects of a general education as well as a training in the subjects, processes, and operations which are fundamental in the commercial, agricultural, home-making, art, or industrial occupations in which young persons are actually engaged or into which they wish to enter. On the educational side, therefore, the enforcement of the Adolescent School Attendance Act will not only give a great impetus to the establishment of vocational education, but will present important problems in organization and administration that must be solved.”

Secondary Education

The High Schools and Collegiate Institutes now number 168 with an enrolled attendance of 34,128. The expenditure on these schools in 1920 was \$3,588,933, and the increased cost of maintaining them over the previous year is due to higher salaries for teachers. The value of school buildings and sites is \$8,814,764, while the value of the equipment amounts to almost another million.

For the first time statistics as to the age of the pupils on enrolment in the first form and their progress throughout the courses of the secondary schools are being collected.

In the “Age, Sex and Grade” tables in the Statistical appendix of the Report, the standing of the boys and girls as on June 1st, 1921, according to their ages, in each school and in comparison with the other schools, is given, as well as the situation as a whole for both the Continuation and the High Schools.

The average age of the pupils on entering Form I of the High Schools in September, 1920, was 14.32 years.

The ages as on June 1st, 1921, were as follows:

	Boys.	Girls.
Lower School, Form I	15.05 years	15.08 years
Lower School, Form II	16.15 “	16.18 “
Middle School	17.48 “	17.39 “
Upper School	18.38 “	18.15 “
All	16.15 “	16.09 “

The Continuation Schools are 144 in number and the close connection between

them and rural life is shown by the fact that more than half of the pupils in attendance are the daughters and sons of farmers.

The position of the secondary schools in our system is now being carefully considered. The changes in the courses of study thus far agreed upon by the highly competent committee on high school studies have gone into effect. Two interim reports of this committee, which is still at work, have been published and issued as a guide to the schools. The joint report of the high school inspectors indicates generally the effect of the new system upon the schools. The necessary revisions of the High Schools Act and Regulations are in progress and it is expected that by another year the Legislature will have before it a measure dealing with the administrative and financial phases of the secondary school system. It is intended to consult the municipal authorities in respect to county high schools, in order, if possible, to arrive at conclusions that will prove acceptable to all.

Grants to Separate Schools

Attention has been drawn during the past few months to the system of apportioning the Legislative grants to elementary schools, public and separate, and to the resultant occurrence of apparent discrepancies in the aid given to public and separate schools in the same localities. The total amount due to separate schools from the Legislative vote is fixed by laws passed before and at the time of the establishment of the Dominion in 1867 and beyond the power of the Legislature to diminish. The details are, in some measure, however, subject to modification. A statement prepared for the Legislature outlining the system in vogue for many years may be quoted here:

There has been no change in the Legislation affecting separate schools since the present Government took office. Nor have any changes been made in the regulations affecting the grants to urban or rural schools which would give separate schools more money than the amount to which the law entitles them. The system in vogue during 1920 and 1921, is the one which was in operation before I came to the Department.

The share of the separate schools in the Government grant for elementary education is secured by the Separate School Act of 1863. The clause which applies to this phase of the matter is as follows:—

“Every Separate School Board shall be entitled to a share in the fund annually granted by the Legislature of this Province for the support of Common Schools, and shall be entitled also to a share in all other public grants, investments, and allotments for Common School purposes, now made or hereafter to be made by the Province or the Municipal authorities, according to the average number of pupils attending such school during the twelve next preceding months, or during the number of months which may have elapsed from the establishment of a new separate school, as compared with the whole average number of pupils attending school in the same City, Town, Village, or Township.”

The rights set forth in the Act of 1863 are protected, as is well known, by section 93 of the British North America Act, the first clause of which states that the Provinces control education but,—

“Nothing in any such Law shall prejudicially affect any Right or Privilege with respect to Denominational Schools which any Class of Persons have by Law in the Province at the Union.”

By direction of the statutes, section 6, Department of Education Act, the sums to be appropriated by the Legislature for elementary education are voted under three general heads:—

- (1) Votes to urban public and separate schools.
- (2) Votes to rural public and separate schools, Counties.
- (3) Votes to rural public and separate schools, Districts.

Under these headings, the following sums were voted for the fiscal year ending October 31st, 1921:—

Urban Schools	\$197,000 00
Rural Schools, Counties	\$1,100,000 00
Treasury Board Order	555,000 00
	1,655,000 00
Rural Schools, Districts	460,000 00
On the basis of the average attendance in these groups of schools the sums voted were divided between the public and separate schools as follows:—	
URBAN SCHOOLS:	
Public Schools	\$161,540 00
Separate Schools	35,460 00
	\$197,000 00
RURAL SCHOOLS, COUNTIES:	
Public Schools	\$1,514,490 50
Separate Schools	140,509 50
	\$1,655,000 00
RURAL SCHOOL, DISTRICTS:	
Public Schools	\$420,946 00
Separate Schools	39,054 00
	\$460,000 00

Note:—The total amount of grants actually paid to the elementary schools differs from the amount voted by a few thousand dollars. This is due to the fact that there are some trifling expenses charged against the legislative vote, such as printing of statistical returns, etc., and a small amount of money is always kept on hand to provide for adjustments of grants. On the Separate School side of the account, moreover, a portion of the grants goes back to Consolidated Revenue, because some schools are not obeying the law and cannot legally be paid.

The amounts named in this statement belong respectively to the public and to the separate schools and had to be distributed by the Department of Education each to its own class of schools. There is no warrant for either increasing or diminishing the proportion to be given to public schools or to separate schools, and such has not been done.

The statutes and regulations governing the distribution of the sums voted in support of elementary education among the schools of the Province are the same for public and separate schools. The regular procedure is first to divide the total sums into two parts as directed by the law. The regulations are then applied. As an example, take the vote to rural schools for the year 1921, which was \$1,655,000.

This sum was divided on the basis of the average attendance in the schools between the public schools and the separate schools. The former's share being 91.51% or \$1,514,490.50, and the latter 8.49% or \$140,509.50. The share belonging to each class of schools was then distributed among the individual schools of the class in accordance with regulations which have existed for many years. These regulations take into account such factors as salaries paid to teachers, accommodations, equipment, grade of teacher's certificate, teacher's experience, and

assessment of school section. In this distribution, the public schools absorbed their total apportionment; but on the same basis the separate schools absorbed only \$70,863.71 of their total apportionment of \$140,509.50, leaving a balance of \$69,645.79, or practically 50%, which unquestionably belonged to and had to be distributed among the separate schools. The balance of the allotment for the rural separate schools was distributed pro rata among these schools as provided for in the regulations. The procedure in making the distribution is the same in every detail as that which has been followed for several years. The sections of the regulations which provide for a second or pro rata distribution are not new. From time to time they have been applied to public schools as well as to separate schools when balances have remained unabsorbed. For example, the public schools in 1919 received a 9.5%, and in 1920 a 47% pro rata increase in unabsorbed grants.

The operation of the factors determining the distribution has always given rise to inequalities in the amounts awarded to different schools. The disparity which has been complained of between the grants paid to certain rural separate schools compared with those to neighbouring public schools is, therefore, not a new condition. It has been in existence for years. An examination of the records as far back as 1917 shows that the same schools now cited afforded illustrations of these inequalities from year to year. The inequalities are greater now because the Legislature has made more generous appropriations to elementary education, and the separate school share has been proportionally increased as the law requires.

The increases in the Legislature appropriations for rural schools which have taken place during the past two years have, indirectly, possibly been the chief cause of directing attention to disparities which previously existed. These appropriations were \$750,000 in 1919, \$1,000,000 in 1920, and \$1,655,000 in 1921. The last two increases are the only changes that the present Administration is responsible for and the appropriations have been increased in order to pay in full the grants earned by boards under the regulations established by previous Administrations.

The inequalities can be traced in general mainly to two causes: First,—The total sum of money appropriated by the Legislature for elementary schools is provided for, as has been pointed out, by votes to three different classes of schools—Urban Schools, Rural Schools in Counties, and Rural Schools in Districts—and funds cannot be transferred from one class to another for the purposes of levelling up, even when the proportion of the number of public to separate schools is found not to be constant in all three classes. Second,—While the total sum of money voted for elementary education is apportioned to public and separate schools on the basis of average attendance, the distribution of these sums to individual schools is determined by statutes and by regulations which take into account, not average attendance, but other factors, such as salaries paid to teachers, value of equipment, character of the accommodations, grading of teachers' professional certificates, length of successful experience, and the amount of municipal or school assessment.

The grant per pupil calculated on the basis of the total average attendance of pupils enrolled in either the urban or the rural public schools is exactly the same as the grant per pupil on the total average attendance of pupils enrolled in the corresponding class of separate schools, but, because there may be differences both in the number of pupils assigned to individual teachers and in the factors which determine the grants to be paid to the schools, the grant per school may

differ widely in either class of schools. But if one separate school has received more money than it appears to be entitled to as compared with a public school in the same locality, it has received this money at the expense of some other separate school and not of the neighbouring public school. Not one cent of money which belongs to the public schools has been taken away from them for the purpose of paying higher grants to separate schools, and not one cent of money has been given to separate schools over and above what the law guarantees to them.

The statutes and regulations governing the distribution of grants among the schools were framed by the former Governments with the sole aim of bettering educational conditions. The largest portion of the grant has been distributed on the basis of the salaries paid, because experience has shown that well-paid and well-trained teachers, with inducements to remain in the continuous service of one school, form the chief factor in rural school improvement. But as no scheme of distribution can be absolutely perfect, it is doubtless true that improvements may be made in the method of distribution, with a view, on the one hand, of lessening the disparity between the grants paid to public and separate schools in the same communities, and, on the other, of a more equitable division among the separate schools themselves. The question will receive careful consideration by the Government and, if it is thought advisable, any necessary legislation will be introduced.

But it must be understood that no such change can possibly be made in the Provincial law which will affect the principles of division laid down in the Constitution.

Respectfully submitted,

R. H. GRANT,
Minister of Education.

Toronto, April, 1922.

APPENDIX A

REPORT OF THE CHIEF INSPECTOR OF PUBLIC AND SEPARATE SCHOOLS

TO THE HONOURABLE R. H. GRANT, M.P.P.,

Minister of Education for Ontario.

Sir,—I beg leave, herewith, to submit my annual report for your consideration.

I have the honour to be,

Sir,

Your obedient servant,

JNO. WAUGH.

Toronto, March 14th, 1922.

Changes in the Staff of Inspectors

At the outset it is my duty to report the death of C. B. Edwards, Senior Inspector of the City of London, on November 1st, 1921. Mr. Edwards was in many respects an ideal inspector, helpful, courteous, and systematic. He produced an organization in the schools of the City of London seldom equalled. He was a keen student of the teachers' art and had prosecuted extensive investigations, especially of school architecture and school management. He was a man of great refinement of spirit and sentiment. The fine Public Schools of the city will be a lasting monument to his memory. He was succeeded by Mr. V. K. Greer, formerly of the Stratford Normal School, and at one time Inspector of Public Schools in the County of Dundas.

In February, 1921, Inspector Thos. Jamieson, of Carleton East, died after a long illness. He had been for many years in the service of the County of Carleton as Public School Inspector. He was remarkable for his sagacity in dealing with Boards of Trustees and in seeking satisfactory settlements where serious difference of opinion had arisen. He was universally respected for the wise and conscientious discharge of his duties. He was succeeded by Mr. T. P. Maxwell, who had been a member of the staff of the Ottawa Public Schools.

Other changes in the Provincial Staff of Inspectors throughout the year are as follows:

Mr. C. McDowell, who has for several years had charge of Public School inspection in the Kenora area, is to be succeeded by Mr. S. Shannon, of the Kenora High School. Mr. McDowell had done excellent service in the inspectoral area to which he was assigned.

By the retirement of Inspector Michell of Lanark, the Provincial service loses one of its oldest and most experienced officials. Mr. Michell's tact, cheerfulness and unflinching sympathy with the teachers' work had made him honoured and respected wherever he was known. He is replaced by Inspector T. C. Smith, formerly Principal of the Gananogue High School.

The District Inspectorates were redistributed in the spring term and an additional Inspector, Mr. D. T. Walkom was assigned to the Cochrane area. In view of the growth and increasing educational needs in Northern Ontario it may, perhaps, be necessary still to add an additional member to the staff of District Inspectors.

The County of York was redistributed into four Inspectorates and Mr. W. W. A. Trench was given charge of Inspectoral Division No. 3, including the villages of Markham, Richmond Hill and Stouffville.

An additional inspector was appointed in the City of Hamilton as it was found necessary to employ a great part of the time of Senior Inspector Ballard in organizing the service, for carrying into effect the Adolescent Act and the Attendance Act. Mr. A. W. Morris was appointed as an additional Inspector.

An additional Separate School Inspector, Mr. T. S. Melady, was appointed at the beginning of the present year to take charge of a Separate School Inspectorate in the Counties lying along the Georgian Bay and Lake Huron.

—:—

The work of the present year has been largely occupied in perfecting the various educational reorganizations mentioned in my last report.

A brief resumé of the work accomplished in each is given below.

Consolidation of Rural Schools

The movement for the consolidation of rural schools has gone forward steadily and is daily gaining in public favour. A Committee of the House, consisting of the Minister of Education, Mr. Thos. Marshall, Mr. Warren Stringer, and Mr. Chas. F. Swayze, in the course of their investigations visited the Hudson Consolidated School and the Mallorytown Consolidated School exhibiting two widely different phases of consolidation. All the members of the Committee expressed themselves as enthusiastically in favour of this plan for the reform of rural education. Later in the year, a number of members of the Trustees' Association, some of whom had been hostile to consolidation, visited the Consolidated Schools at Nobel, Falls' View and Mallorytown, and these reached a similar and unanimous conclusion as to the value of this type of education. Some of the members of this latter delegation have since proved to be valuable auxiliaries in the propaganda as they were able to speak with authority of conditions which had actually come under their own observation.

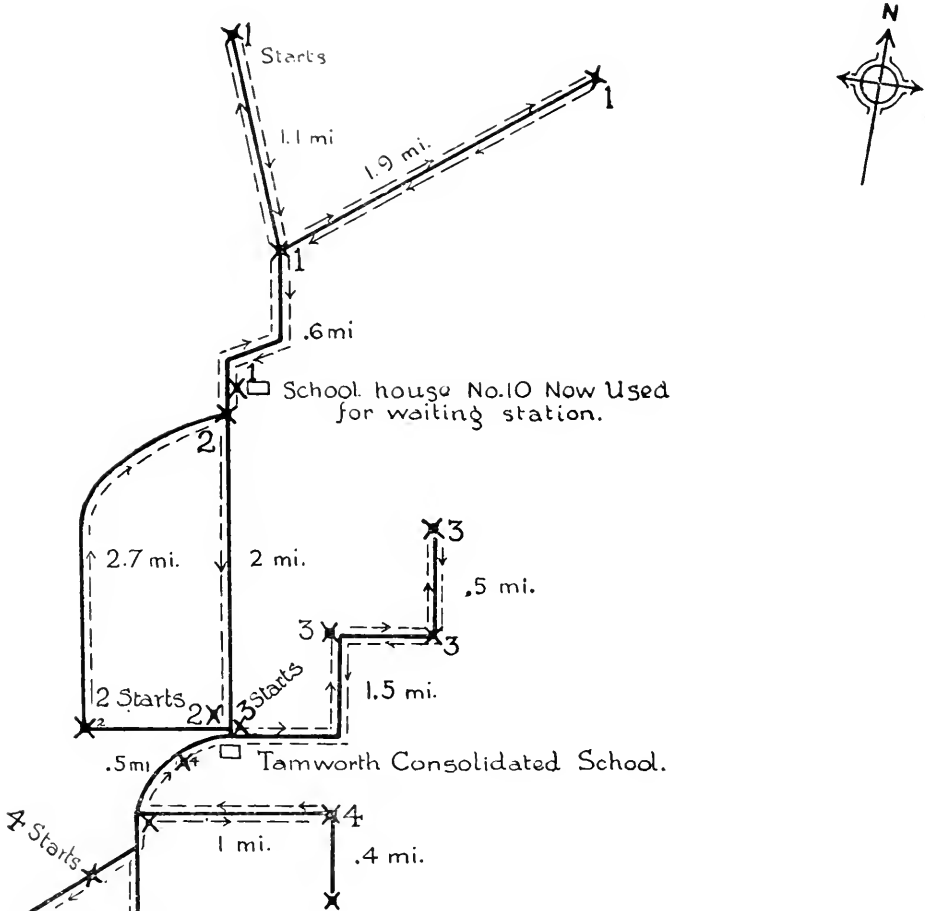

Further details of the progress of Consolidation are given in the report of Mr. Chisholm, Assistant Chief Inspector, who has had general charge of this branch and who has been ably seconded by two field workers, Mr. P. J. McLaren and Mr. J. R. Bell.

"The extensive campaign for the dissemination of information with reference to consolidation of rural schools carried on so successfully during 1920, was continued with even greater activity during 1921. More than three hundred public meetings and conferences were held by Departmental officers during the year in practically all parts of the Province. Public interest in this type of school is undoubtedly growing; speakers are given a much more sympathetic hearing; objectors, in many cases, are listened to with more or less impatience. Not only has this propaganda created a lively interest in consolidation but it has had a stimulating influence upon educational affairs in general. Many local prejudices that formerly existed in rural districts, due in part to lack of knowledge of conditions beyond the immediate local horizon, and to the great strength of the traditional section system of administration, are being dissipated. The increased interest thus aroused, if wisely directed, should lead to a substantial advance along all lines of educational reform.

"The following Consolidated Schools are now actually in operation: Nobel, Mallorytown, Morley, Falls' View (Stamford Township), Humber Heights (Etobicoke Township), Tweed, Tamworth, and Dorion. The building operations at Barwick and Mindemoya are practically completed and these schools will shortly be in operation. At Wellington the contract has been let for a fine modern school with eight classrooms. The Dominion Cannery Limited generously presented the Wellington Board with a valuable lot of five acres in the village as a site for the school. At Savard the children are being transported to two of the old schools pending the erection of a central school. Burriss and Benmiller (Colborne Township) are considering plans, preparatory to building. The Tarentorou Board has been advised to defer building till a more opportune time, owing to local difficulties. The Hudson Consolidated School, which began operations in 1910, continues to give satisfaction to its patrons. The Guelph Consolidated School which was organized under the 1902 Amendments of the Public Schools Act, has made application to have the school made subject to the provisions of the present Consolidated Schools Act. This school continues to be, according to the County Inspector, the most efficient in the Inspectorate.

"The cost and feasibility of transportation is perhaps the vital factor in the successful operation of the Consolidated type of school. It is, therefore, very gratifying to learn from reports already received that transportation is giving satisfactory results. Motor trucks and waggon-vans are used except during the winter months. In some cases, as at Nobel and at Mallorytown, one motor-van serves two routes, usually a long and a short one. Transportation is ensuring a greater regularity of attendance. The Principal of the Mallorytown School states that on October 12th the most disagreeable day in the Fall term, not one of the pupils conveyed to school in the vans was absent on account of the inclement weather; all were dry clad. Parents should not lose sight of the great moral advantage of having the children going and coming under the care of a responsible driver. The authority of the Principal, of course extends from the time the pupils leave home in the morning until they reach home in the afternoon. Transportation is as much a part of the school system as any other phase. Therefore, it should be under complete control of the school authorities at all times. Transportation costs are much more reasonable in every case reported than the estimates submitted at the time of consolidating."

The following sketch shows how transportation is handled at the Tamworth Consolidated School:—

	Paid	Distance one way
× 1 Hartwick's van	\$300	3.6 mi.
× 2 Stinson's van	\$453	4.7 mi.
× 3 Jas. Donovan's van	\$300	2.0 mi.
(+ spur line about 1mi)		
× 4 Thos. Donovan's van	\$190	2.75 mi.

Medical and Dental Inspection of Schools

During the past year School Medical and Dental Inspection, School Nursing, Health and Physical Education and School Hygiene generally have been receiving an increased share of attention. The Department of Education has, through the Division of School Hygiene, been attempting to awaken the attention of educational authorities to the significance of the fact that mental retardation and physical abnormality are often closely associated.

The staff of the Division now numbers seven full-time physicians and twelve nurses under the direction of a Medical Director and Chief School Nurse. These have been largely occupied throughout the year in carrying on local surveys in various portions of the Province, Middlesex, Lambton, Welland, Elgin, Oxford and Dundas having been covered, and Huron, Wellington, Brant, York, Simcoe, Durham and Carleton partially completed. The object of this survey is to offer the rural and small urban schools some form of Medical Inspection, and in so doing to arouse a keener interest in the need for permanent school health supervision. In carrying out the end in view, the survey staff are effectively seconded by the School Nurse Demonstrators, five in number, who, following the survey, carry on a demonstration of school nursing in a selected area for a period of two or three months, to show the possibilities of, and the advantages to be derived from, a permanent and efficient system of School Medical Inspection. As a result of this work, twelve rural units have been fully organized; Trafalgar Township, with Milton and Oakville in Halton County, was the first of these organized units. The larger portion of Welland County is now covered by a school nursing service consisting of three units. Peel has two, York three, Simcoe, Huron, Dundas and Wentworth one each. There seems every prospect that the Counties of Essex, Renfrew, Elgin and Oxford will shortly inaugurate a school health service.

In the units already operating, much satisfaction has been expressed at the service rendered by the school nurse. In the districts to which reference has been made, no great difficulty has been encountered in carrying out the plans for this work.

Much useful propaganda work has been accomplished by the staff in other portions of the Province and they have been able to supplement the efforts of the local Inspectors to improve school sanitation generally, throughout the Province. Through the instrumentality of the school health service it has been possible to render valuable assistance in remote localities where there are no physicians available in the fight against infectious diseases and where, without this timely aid, much loss of life might have ensued. In response to the call of the Department for improvement, nearly all of the sixty centres, where some form of school nurse service is in operation, have adopted the plans and methods approved by the Department and will, on the completion of a specified period, be entitled to share in the liberal Legislative grants now made with a view to perfecting this branch of educational activity.

About 72,000 children have been examined by the Departmental physicians throughout the year 1921 and a great many facts of interest have been discovered. While it is not possible to give all the findings, it is thought that the following will serve a practical purpose. Some 8,564 were found to have defective vision, 1,707 defective hearing, 48,913 decayed temporary or permanent teeth, 48,260 had never been successfully vaccinated. These striking facts challenge attention and indicate the great need for the extension of school health service to every part of the Province if the children are to have a fair start in life.

While much has been done within the last year, it is hoped that still greater progress will be reported at the close of the coming year, especially along the lines of physical education and health teaching.

Co-operation with other organizations

Senior Red Cross.

The Department of Education has received very material assistance throughout the year from the Ontario Division of the Canadian Red Cross Society, who financed the appointment of two additional School Nurse Demonstrators in Dundas County. These nurses have completed a survey of the county which cannot fail to be of assistance in the general movement for school health.

Junior Red Cross.

The service of the Junior Red Cross in our schools on behalf of health and citizenship merits a special word of approval. This educational activity of the thirty-eight national organizations united in the League of Red Cross Societies has helped greatly towards the recent world-wide emphasis on the need of caring for the health and training of school children.

In Ontario the Junior Red Cross Committee, working in the closest co-operation with our School Health Division has directed its efforts to helping teachers to substitute the so-called project method of teaching for those methods which had hitherto prevailed. Four issues of interesting and inspiring publications have been sent to all schools for the instruction of pupils and teachers in this matter. The result has been that in many schools the subject of School Hygiene has been vitalized into a new school-activity in health. Children have become active partners in health improvement instead of being the passive recipients of formal instruction. Many teachers have come to realize that successful instruction in Hygiene is to be measured in good growth and well established good health habits. The Junior Red Cross is making a distinct contribution to the cause of education in training our young citizens for service.

The School Nurses find the Junior Red Cross Auxiliaries very helpful to them in their work. Between their visits they have in these Health Clubs enthusiastic assistants to carry out their instructions and recommendations.

Women's Institutes.

The Department of Education has to acknowledge gratefully the assistance of many branches of The Women's Institutes in directing attention to local needs. In nearly all branches of the educational service they have given the Department sympathy and practical support. Their lecturers have taken care to inform themselves as to the best plans of co-operation with this Department and have been of special value in extending the work of the school into the home.

National Committee of Mental Hygiene.

The services of Dr. C. K. Clarke, Dr. Eric Clark and Dr. Hincks were secured to assist the auxiliary class division in carrying out plans for the organization of auxiliary classes in many of the urban districts of the Province.

Auxiliary Classes

The work in connection with the organization of these classes has gone forward rapidly, as will be shown in the Report of Dr. Sinclair, who, during the past year, has shown great zeal and ability in the organization of this type of school.

Educational Problems

Some of the problems with regard to education in the outlying parts of the Province, which had become acute through the rapid development, especially of the forest and mining industries and of agriculture, were suggested in my previous report. The situation has been ably handled by the District Inspectors as will be shown by the following extracts from the report made by Dr. J. B. MacDougall, Assistant Chief Inspector for Northern Ontario.

Northern Ontario

"The Districts cover an area one thousand miles in length from east to west and varying from two to four hundred in width or somewhat over three hundred thousand square miles. Much of the central portion is unpeopled and sparsely settled. Problems innumerable and varied present themselves, due to natural expansion, scattered settlement, lack of municipal organization, diverse forms of land-holding and primitive conditions of living and travel. But to these the Inspectors have applied themselves with a vigour and self-denial which cannot fail of success and of which the fruits are everywhere in evidence.

As settlement grows the burdens have been equalized from time to time by the addition of new Inspectors and a readjustment of territory. During the past year one new inspector was appointed in the person of D. T. Walkom, B.A., former Science Master in Sault Ste. Marie High School. He took charge of the northern section of Timiskaming from the town of Hearst on the National Trans-continental to Swastika on the Ontario Government Railway, a distance in direct line of over three hundred miles. This inspectorate comprises the remotest and most recently settled territory in the Province. Its oversight is complicated by problems of isolation of homes, primitive road conditions, limited resources and racial admixture, yet it holds an enviable standing in many factors fundamental to progress. The average salary for one-room rural schools is over one thousand dollars and for all classes of rural schools almost thirteen hundred dollars in this Inspectorate, and though rural living conditions are necessarily unattractive, it is gratifying to find but fifteen untrained teachers in a total of seventy-eight.

Prior to last year the border lands of Old and New Ontario were joint District and County Inspectorates. These were dissociated and each class of territory was made self-contained.

The following outline sets forth the more distinctive features of the past year.

1. *Salaries.*

These have made a perceptible advance in every Inspectorate. The increase ranges from \$18 to \$116 in one-teacher rural schools and from \$40 to \$129 in rural schools of all classes. The general average for the Districts in rural schools is now well over one thousand dollars. Much is due to the revised schedule of grants recently adopted which gives special support to the weak and encouragement to all.

2. *Certificates of Teachers.*

The maintenance of salary standards has been reflected in the qualification of teachers. A comparative study of the conditions for the past three years reveals a steady advance. This year an appreciable improvement is again recorded. There were 1381 teachers in the Districts, of whom 561 belonged to the urban

and 820 to the rural schools, an increase of 80 over last year. Although this increase was largely in rural settlements, the larger part is represented in the higher grades of teachers. Temporary certificates are steadily declining and the wholly untrained teacher promises early to disappear.

3. Consolidation of Schools.

Three new buildings were completed in Northern Ontario in 1921, viz., Nobel, in the Parry Sound District, and Morley and Barwick, in the Rainy River District. Two more were under construction at the close of the year, viz., Dorion, in the Thunder Bay District and Mindemoya on Manitoulin Island. These cost \$150,000 and are representative of the best that can be supplied in structure, heating, sanitation and equipment. In all six of the consolidated schools already established in the Districts of Northern Ontario, educational improvement was immediately reflected in the average of attendance, and in the staffing with teachers of the highest grade and approved experience. In Morley consolidated school ten Entrance graduates returned to pursue higher studies, thus proving that rural pupils are suffering from lack of that opportunity which consolidation provides. Three additional consolidations were organized, at Nipigon in Thunder Bay District and in Glamorgan and Cardiff Townships in Haliburton."

Northern Academy

It will be interesting to follow the fortunes of the Northern Academy throughout the last school year. It will be remembered that my last report indicated that the Academy was then still passing through an experimental phase. The results subsequently attained have, I think, amply established the hopes entertained for its future and have given it an assured place in the future development of education in the Districts as the following extracts from the report of Principal Johnson clearly demonstrate:

"The Northern Academy is situated at Monteith on the Temiskaming and Northern Ontario Railway, two hundred and eighteen miles north of North Bay and thirty-three miles south of Cochrane. This gives it a central location to receive pupils from along the T. & N. O. and the Transcontinental Railways.

The Academy is situated on twenty-four acres of land lying along the Driftwood River, which was originally part of the Demonstration Farm. The main building, built to accommodate the Soldiers' and Sailors' Training School, has been remodelled for dormitories, dining-room and class rooms.

The Academy opened in January 1921, with twenty-three pupils, but this number increased before the end of the term to forty-one, twenty-seven of whom were in the First Form High School, three in the Second Form and eleven in the Public School. Practically all of the High School pupils would have received no further education than is obtainable in the Public School had it not been for the opening of the Academy.

Early in the season there were indications that the attendance would be greatly increased when school reopened in September. On account of the limited accommodation the school was able to accept only one hundred and one, and has been compelled to refuse admission to about thirty-five. There are nineteen in the Public School, seventy-two in the Lower School and ten in the Middle School. There are thirty-eight boys and sixty-three girls ranging in age from ten to twenty-two.

The pupils come from all parts of Northern Ontario; from Hearst to Low Bush on the Transcontinental, all along the T. & N. O. Railway to North Bay, and west to Foleyet in Algoma.

The fees are such that the majority of pupils are able to make payment. There are cases however where the parents are unable to pay. Under such circumstances they are given board and tuition free under an agreement to teach in the Districts.

The primary object of the Academy is to prepare teachers for Northern Ontario, although pupils preparing for the university are admitted when there are no applicants for the Teachers' Course. About seventy per cent. of the pupils in attendance at present are qualifying for the Normal Entrance.

The High School work is carried on in much the same way as in the ordinary High School, although owing to lack of accommodation certain activities are restricted. Household Science is taken up in a practical way entirely. No classes are held in this subject but all pupils are required to look after their own dormitories, do laundry work, clear and set tables, wash dishes and when opportunity permits assist in the preparation of meals. All this is under the direct supervision of a thoroughly competent housekeeper.

The Agriculture option is carried throughout the school. Small school plots are not attempted but the practical work is done on a large scale, the pupils using the Academy Farm and the adjoining Demonstration Farm as their laboratory. On our own farm vegetables and grains were raised over and above the amount required for our own use. Hogs, poultry and bees are kept on the Academy Farm—these in conjunction with the cattle, sheep and horses of the Demonstration Farm provide ample material for the practical work in live stock.

Musical education at present is perforce neglected to a large extent. Although a large number of pupils are anxious to take music lessons we are unable to accommodate them. In the near future, however, when the present building programme is completed, special attention will be given to this subject. Considerable attention is given to choral singing and an orchestra is being formed.

The physical education of the pupils has been an important consideration. Although there is no gymnasium, this fact has affected us only in bad weather as the campus provides every opportunity for outdoor sports, baseball, basket-ball, football and hockey being played according to season. All of these games have been organized and supervised by an energetic instructor. Inter-year games were organized and teams entered in a school league in the district. A Field Day was held and all events were keenly contested although it was the first of its kind ever witnessed by the majority of the pupils. A large outdoor rink was built this winter and is in constant use. Weather permitting, the pupils are allowed a half-hour of skating between study and bed time, that is between nine and nine-thirty.

The social and literary opportunities of residential school life are not overlooked, and Friday evening of each week is regularly set aside for an evening entertainment of some kind. These evenings are so arranged that every alternate one is devoted to a literary programme. The pupils are given every encouragement to take part, and all possible help is given them in preparation. In this way latent talent is fostered and self expression is developed. This year Canadian literature has been featured. A moving picture machine, for which we are indebted to the District Representatives of the Department of Agriculture at New Liskeard,

has been an added feature in our programmes. Alternating with these literary programmes are evenings of a social nature, devoted to games, contests, or dancing, always under supervision. These Friday evenings have become school 'institutions' and are looked forward to with genuine pleasure by the pupils.

Sunday is spent in accordance with the requirements of law and religion. All unnecessary work and play is forbidden and a quiet observance of the day is required. Two church services are held in the village, one Anglican and the other Union. All pupils attend these services unless excused at the discretion of the Principal. If possible pupils attend the services of their own denomination. On Sunday also, a Bible School is held at which attendance is general but not compulsory. On account of the diverse character of the class, doctrinal or denominational subjects are not discussed, but a thorough grounding in Sacred History and general Bible study is the aim. A half-hour of hymn singing follows the Bible Class. This, though only a voluntary service, is very popular and is of value as an opportunity for choral work and hymn study.

In view of the fact that a large percentage of the settlers coming into Northern Ontario are French it is advisable that the teachers in our Public Schools should be able to speak French. To this end conversation French is taught. We have been fortunate in securing a teacher whose native language is French to take up this branch of the work.

On account of the crowded condition in every department there has been little opportunity for work of an experimental nature. Some work has been started in connection with the correlation of certain Public School subjects with the corresponding subjects in the High School, and before long some interesting results should be available.

One of the great problems we have is the many stages of advancement at which pupils come to us, especially in the Public School. Owing to the isolated location of the homesteads and lack of roads, the children have been practically without any schooling, and we have received boys of fourteen and fifteen, who were unable to read or write.

The prospects for next year, so far as attendance is concerned, are most encouraging. Already we have applications from about thirty prospective students and as the limit has been set at one hundred and fifty, the prospects are that we shall reach the limit before school reopens in September."

Victoria Industrial School

A review of the conditions at the Victoria Industrial School was made last year by a commission. This report, which is now in your hands, indicates that a complete reorganization of this institution is imperatively necessary, and suggests that the school should be brought into closer relation with the Provincial Government in order that it may form an integral part of the system of education. This institution has a direct and immediate relation to the Auxiliary Class problem and to the complete enforcement of the School Attendance Acts: and any reorganization should take both these factors into account. It is earnestly hoped that steps will be taken to deal with the situation without delay.

The Assisted School Fund

A rapid development in education throughout the year has brought into action, the resources of the Assisted School Fund to a greater extent than ever before. An attempt has been made to distribute this fund,—

1st. For the purpose of equalizing the educational burdens of the different communities and,

2nd. For the encouragement of Trustees in providing new or increased educational facilities in their schools.

It will be necessary during the coming year to make even larger calls on the Assisted School Fund and an attempt will be made to equalize still further the load through its agency. Of course, the great difficulty in using the fund for this purpose, lies in the fact that the assessment of the various school sections lacks any semblance of uniformity.

An assessment of \$100,000 in one part of the Province may mean anything from an assessment of \$60,000 to an assessment of \$150,000 in other parts. The School Inspector, however, who has come into close relation with the life of his constituency, should be a good judge of the fairness of the assessment and should be able to assist the Department in reaching an equitable basis for the distribution of special assistance.

School Accommodations

Reports received from various parts of the Province seem to indicate that there is need for serious reform in the sanitation and ventilation of many of the schools. The water supply is frequently found to be unfit for use, and sanitary conveniences, lighting, and seating accommodation are often wholly unsatisfactory. The public generally does not seem to be fully aware of the gravity of these conditions, and every effort should be made by the Public School Inspectors to see that the school buildings and premises are clean and tidy. A specific effort should be made to see that every school is provided with a proper supply of drinking cups, towels and basins.

Where the school well does not yield a satisfactory supply of drinking water, or where the water is tainted or shows evidence of possible pollution, it may be well to advise putting in a drilled well, properly protected from contamination. This is much more sanitary than the ordinary dug well and much more easily kept clean and free from contamination.

Teachers and Qualifications

A few figures are given below which will indicate the rapid growth in the supply of teachers and the advance in their qualifications since 1916.

Year.	Total.	I.	II.	III.	Lower Grade.
1916	12094	1084	8559	1346	1105.
1917	12315	1106	8784	1317	1108
1918	12490	1099	9018	1247	1126
1919	12855	1246	9193	1159	1257
1920	13318	1303	9544	1160	1311
*1921	13582	1299	10177	1001	1105

* Estimated from returns received from Inspectors.

The above table shows an increase in the number of teachers within the five-year period of 1,488 or 297 per year. An examination of the table will show that the gains made are in the columns showing the numbers of teachers holding First and Second Class certificates. During the five-year period, the number of teachers holding First Class certificates was increased by 215; the number of teachers holding Second Class certificates was increased by 1,618; the number of teachers holding Third Class certificates was reduced by 345; the number of teachers holding Lower Grade certificates was in 1916, 1,105, and was increased in 1920 to 1,311, falling again to the original figure of 1,105 in 1921.

In estimating the gains made it is always important to remember that teachers of the First Class are being drawn off from year to year for service in Continuation Schools.

No more convincing proof of the steady increase in numbers and qualifications of the teachers could be given than is furnished by this table. It does not seem unreasonable to expect that within a few years it will be possible to announce that for every school in the Province of Ontario there is a qualified teacher available. In the meantime, it may be fairly said that the exodus of teachers from Ontario to the other Provinces is at an end.

Relative Cost of Education in the Different Provinces

Some interesting figures are given in the report of the recent convention of school trustees held in Saskatchewan. These figures show that in the year 1919, the cost per pupil in the publicly controlled schools in the various Provinces was as follows.—

Saskatchewan	\$60.79.
British Columbia	58.73.
Alberta	52.89.
Manitoba	46.34.
Ontario	38.73.
Quebec	34.65.
New Brunswick	21.54.
Nova Scotia	19.60.
Prince Edward Island	16.25.

The very considerable increase in the school grants paid in Ontario since that time has resulted in large advances in the salaries paid teachers and this would greatly modify these figures so far as this Province is concerned. But even these advances would fail to justify the criticism sometimes made by the uninformed that the costs of education here are excessive. In 1920, a year later, the cost per pupil in Ontario was still only \$47.57.

Visual Instruction

During the year an attempt has been made to discover the value of the moving picture machine and the projection lantern as agencies in education. The projection lantern has found a definite place in the school room and has been used for educational purposes with success for many years. The moving picture machine, whilst it has clearly established itself as a medium for propaganda, has not yet been fully accepted in the ordinary teaching exercises of the school; and it will, perhaps, require some years of careful experiment before the proper method of introducing and handling the moving picture in the class

room is discovered. In the meantime, it seems quite clear that for the purpose of suffusing a subject with vivid interest and for the purpose of fixing experiences in the memory, the moving picture machine is one of the teacher's most valuable auxiliaries.

The Department of Education hopes, during the present year, to add to the stock of moving pictures already in its possession, the following,—The Consolidation of Rural Schools, The School Garden, The Play Ground, The Gymnasium. The two latter will be used for their value in connection with the organization of physical education, the other two in the furtherance of the community movement through the medium of the schools.

Inspection of Schools

The appointment of Dr. Karr as Director of Organization of Rural Schools and Mr. Neil McDougall, of Petrolia, as General Inspector will make it possible to give a greater amount of assistance to the Public School Inspectors in carrying on their work.

I am glad to report that the Inspectors in general throughout the Province are giving valuable assistance to the Department in carrying out the various branches of the reorganization now in progress. This has especial reference to the consolidation of rural schools, medical and dental inspection, agricultural education and community organization.

While it is not intended and is not practicable for the Public School Inspector to become responsible for the professional training of teachers, it is still his duty to give such encouragement, direction and advice to the teachers as will enlarge their conception of the work they have to do and stimulate them with a zeal for doing it. This is indeed the most essential part of the work of the Inspector. It is of far more importance that when the Inspector leaves the school he shall have left behind him a new and better insight into the purposes and methods of education than that he should have sedulously fulfilled the more formal part of his duties: and it is safe to say that the man who does the first is not likely to neglect the last.

Teachers should be given every encouragement for the display of initiative. It is always to be remembered, however, that unalloyed liberty is, perhaps, the most doubtful of all blessings. Teachers are to be found, who, if left to their own devices, would devote the greater part of their time to some subject in which they are especially interested. To allow such a teacher to follow his inclinations is to place his school under a serious handicap. The natural aptitude of the pupils has a right to recognition as well as the natural inclination of the teacher: and whilst due allowance should be made for both, both should be regulated. It is worth while to observe that studies for which the child has little natural aptitude may be an admirable means of salutary mental discipline by bringing into play sets of faculties which would otherwise be neglected. A state system of education must always place the emphasis of attention on well balanced attainments, character and personality and it is just at this point that the tact and experience of the Inspector are properly called into play.

Regulations and Courses of Study

There is some misconception of the privileges granted by the Regulations in respect especially to the latitude permitted in organization and management

of the public schools. Trustees and Inspectors, for example, are given the widest possible powers in dealing with the subjects of the course of study in Group III and certain powers are conferred upon Inspectors in connection with the course of study in Group II (see page 38 of the Public and Separate Schools Regulations).

In London and Windsor new methods of organization of city schools are being successfully operated without any departure from the spirit and intention of the Regulations. In any case, where, in the opinion of the Inspector, the operation of the present Regulations does not allow sufficient freedom to local authorities he should call the attention of the Department to the condition, giving in full his reasons for any change which he may have to suggest. As a further illustration of the degree of latitude allowed by the Regulations in regard to Courses of Study, it may be pointed out that although certain courses in the Forms are divided, each into a Junior and Senior Grade, these grades may be combined or a different division may be made by the Principal. In other words, the whole aim of the Regulations has been to give every reasonable latitude to the local educational authorities in arranging the organization of their schools. The opposite view can be held only by those who have never taken the trouble to inform themselves of the successive changes which have been made to bring this about. Further changes in the Course of Study may be necessary. It may for example, be found possible to eliminate the formal study of Arithmetic in the Junior Grade of Form I, and to have this subject taught in this Grade as merely incidental to the other subjects and school activities. The present Regulations, however, are already wide enough to allow this, as the Principal is allowed to make such a distribution of the work of the Junior and Senior Grades in any Form as he may consider advisable.

The issue of new text-books in Geography and History will necessitate some modifications of the Course in these subjects and the time has come for a re-adjustment of the relations between the Course in Nature Study and in general Agriculture.

APPENDIX B

REPORT OF THE DIRECTOR OF INDUSTRIAL AND
TECHNICAL EDUCATION

To the Honourable R. H. GRANT,

Minister of Education for Ontario.

SIR,—

I have the honour to submit herewith my Annual Report on Industrial and Technical Schools.

I have the honour to be, Sir,

Your obedient servant,

F. W. MERCHANT.

Toronto, March 18th, 1922.

The First Decade in the Growth of the Industrial and Technical Schools

The Industrial Education Act under which the Provincial system of industrial and technical education has been operated was passed in 1911. We have, therefore, reached the end of the first decade in the development of these schools. The growth during this period has been remarkable. The number of schools has increased from one day school and eight evening schools with an enrolled attendance of less than 4,000 pupils in 1912, to thirteen day schools and fifty-one evening schools with an attendance of approximately 32,000. Over one thousand teachers are now engaged as instructors in these schools.

Growth in Expenditures by Municipalities

The increasing popularity of the schools is shown by the willingness of municipalities to provide funds for the maintenance of this type of education. The following tables indicate the expenditures made by municipalities on day and evening schools during the period for which special returns have been made to the Department of Education.

Year	Total
1913-14	\$ 111,117 94
1914-15	123,091 01
1915-16	171,989 81
1916-17	229,147 33
1917-18	493,199 86
1918-19	659,072 82
1919-20	1,347,905 04

Growth in Expenditures by the Province

These expenditures have been stimulated and made possible, in a large measure, by the liberal grants appropriated by the Legislature for technical education. The following table shows the expenditure by the Department from the opening of the classes in 1911:—

Year	Total Grants
1911-12	\$ 5,380 26
1912-13	37,128 48
1913-14	56,235 10
1914-15	54,611 78
1915-16	58,192 65
1916-17	65,024 54
1917-18	95,781 48
1918-19	125,984 41
1919-20	578,933 34
1920-21	565,287 25
	\$1,642,559 29

The large increase in expenditure in the year 1919-20 was due to the fact that the basis for the distribution of grants to municipalities was changed, and Provincial assistance was given boards to help them to meet expenditures on capital account as well as for maintenance. This was made possible by the subsidies in support of technical education received from the Federal Government in accordance with the provisions of the Dominion Technical Education Act of 1919.

Progress in Adjusting Courses to Meet the Needs for Vocational Instruction

But the most important advance is shown in the progress that has been made in adjusting the organization of the schools to meet the need for vocational training. The schools had their origin in a demand which grew out of a wide-spread belief that the youth of the country, through their school education, should receive some direction and a measure of special preparation for their life-work. But it is one thing to recognize such a need and quite another to develop constructive plans for an educational organization which would bridge the gulf which existed between the schools and employments.

Naturally, the plans to be adopted were, in the beginning, subject to trial and revision, and progress in permanent advance was necessarily slow. The academic schools have become more or less stereotyped in respect to their objects, types, organization, and courses of study; and it is a comparatively easy matter to maintain these schools and to provide for necessary improvements along lines which are more or less definitely fixed. But the organization of a new type of school with different aims and requiring special courses of study and training presents new problems involving greater difficulties.

Problems in the Organization of Vocational Schools

The necessity for such schools has grown out of changed conditions. In the past, vocational training in commercial and in industrial vocations was provided for mainly through the apprenticeship system, which proved, in its day, to be a most efficient means of instruction. But with higher specialization in the processes of manufacture and with the organization of larger industries on a basis

for economic quantitative production, the apprentice system has broken down and we find ourselves now in a period of reconstruction which has created a demand for making vocational training a specialized service and for placing the responsibility for it on schools organized as a part of the national system of education.

The organization of these schools, then, has introduced many new problems. Take, for example, the construction of courses of study and training. The academic teacher in the ordinary secondary school has the course of study in his department fixed for him and all that he is required to do in his instruction is to follow the details. But vocational teachers have been handicapped in this respect because there has been no source from which they could derive information regarding the details of knowledge which a workman in any trade should possess. There is also a decided lack of available information regarding the operations in which a workman in any trade should receive training in order to be a skilled operator in that trade. To take an example: What should a plumber know of fluid pressure and movement, properties of metals, and of other principles of physics and chemistry, and in what mathematical calculations should he receive instruction, and in what mechanical operations should he be trained in order that he be an intelligent and efficient worker? These requirements are not laid down anywhere in a course of study.

To determine the requirements in specialized knowledge and in mechanical operations for a variety of important trades and to formulate courses of study has been one of the serious problems confronting us in the organization of vocational education. It has been found necessary to make a job-analysis of each separate trade in order to find out the character of the related knowledge and the requirements on the practical side. Further, it is necessary to analyze the material thus secured for each trade and to organize it for presentation to students in accordance with the principles of teaching.

Other problems as well have faced us. We have had to determine the occupations for which it is feasible and profitable to provide school instruction, to study the accommodations and equipment necessary for such schools, and to find means for selecting and training competent teachers for special service in vocational schools.

Progress in Solving the Problems of Organization

But we have made considerable progress in solving these problems, and the real and permanent advance in our work is measured by our success in this direction. The schools are finding for themselves an established place in the educational system of the Province. On the industrial side, they are providing for the young people who are to enter industry the essentials of a good academic education and, at the same time, furnishing a special training in the subjects and operations which are fundamental to the trades and industries in which they are to be employed.

The Necessity for the Restoration of Apprenticeship Agreements in Co-operation with Vocational Schools

But our experience is showing that too much is sometimes expected of such schools. I have observed with a great deal of care during the last ten years the development of our own schools and I have had opportunities of studying at fairly close range the operations of the more important trade schools both in America and in Europe, and I am convinced that a school alone cannot

equip fully a youth as a journeyman in any trade. I am convinced also that some form of apprenticeship should be restored, in which the school and the shop both take a part in the instruction of the apprentice. The function of the school should be to give instruction in the related knowledge and the operations fundamental to an industry, while the apprentice perfects his skill and develops his industrial intelligence at work in industrial establishments under productive conditions.

Progress in Organizing Apprenticeship Systems

Wide-spread interest is now being awakened in the restoration of apprenticeship and considerable progress has been made in establishing systems in cooperation with technical schools. An agreement entered into by the plasterers at Toronto last year requires that an apprentice shall be indentured four years and shall regularly attend night classes at the Toronto Technical School during two years of his term. An agreement in the electrical trades at Hamilton requires supplementary electrical courses to be taken at the local technical school. In the printing trade in Hamilton the apprenticeship agreement between the employers, the men, and the apprentice requires the apprentice to attend the technical school for half a day each week and six nights each month. Any extra time put in at the school shortens the period of apprenticeship. When the shops are closed due to slack times, or for other reasons, the boys attend the technical school classes full time.

The most promising recent development, however, is the national apprenticeship system of the building industry, which was approved by the National Joint Conference Board at a meeting held in January, 1921, in Montreal, and which was also approved by the Association of Canadian Building and Construction Industries at its annual conference at Winnipeg in the same month. (See *Labour Gazette*, February, 1921, p. 198.). The report of the board's committee which drew up the plan, after calling attention to defects of existing conditions, concludes: "Our hope of meeting the situation lies in the revival of a well-established and defined apprenticeship system, with a very definite objective, under the supervision and joint control of our respective organizations." The above scheme was also approved by the Joint Conference of the Building and Construction Industries in Canada, which was held in Ottawa in May, 1921, under the auspices of the Federal Department of Labour.

The following are the main features of the National Apprenticeship System as approved by the Conference. It is to be directed by a National Apprenticeship Council composed of seven members, three of whom shall be employers and three of whom shall be employees in the industry. These six members, who shall be appointed by the Joint Conference Board of the Industry, shall select the seventh member who shall be chairman of the Council. Under authority of the National Council there shall be formed Local Apprenticeship Councils each composed of one employer and one employee for each trade in the industry, with one architect and one industrial engineer. The Local Councils shall carry out the objects of the Apprenticeship System. The relation of the National Council to the Local Councils shall be advisory, except in respect to questions or disputes which shall be referred to the National Council for decision, which decision shall be final and binding. Standard forms of indenture shall be adopted by all employers, and the employer shall bind himself to give the apprentice the fullest opportunity to learn the trade by practice and by attendance at a vocational school. An apprentice shall be bound

to attend prescribed vocational classes, and an examination board of not less than three members shall examine apprentices at stated periods. A Local Council may in certain cases cancel indentures and transfer apprentices to another employer, or may, by agreement with the employer, arrange for short periods of transfer to enable the apprentice to extend knowledge of his trade. The Local Council will assume joint responsibility with the employer for providing facilities for the apprentice to learn all branches of his trade; and it shall determine the number of apprentices necessary, and discharge other functions, all of which are fully described in the Department of Labour's Bulletin No. 3, Industrial Relations Series, "Joint Conference of the Building and Construction Industries in Canada, Ottawa, May 3-6, 1921."

The carrying out of the provisions of such agreements for instruction at vocational schools is assured by the provisions made in our school attendance laws for compulsory part-time instruction of youths under eighteen years of age.

Progress in the Development of Technical Courses

On the technical side, also, our schools are finding a field for themselves that is quite distinct from the engineering courses in our universities. The scope of such classes cannot be marked off very distinctly from the industrial courses. Our vocational courses are designed to give instruction in the mechanical operations and in the knowledge related to different occupations. Whenever the knowledge factor necessary to efficiency in an occupation becomes more important than the factor of skill, the form of training may be described as technical rather than industrial. Now, as the ratio of knowledge to skill varies with different occupations, it is clear that no sharp line can be drawn between the two types. Nor do we attempt to draw such a line because, with very few exceptions, both types of instruction are provided for in the same school, but, as a rule, in different classes.

The exact sphere of the work of our technical schools can scarcely be prescribed in a detailed outline. It will be best understood by illustrations taken from some of the typical fields in which instruction is being provided.

Technical Courses in Steam Engineering

A host of men find employment in charge of the operations of steam plants of varying degrees of complexity from the simplest heating installation to the largest and most complex power plants. These men all need a certain amount of knowledge of the properties of steam and of its applications, the amount varying with the complexity of the plant. While graduate engineers may be in charge of a few of the more important of these plants, a very large proportion of the men employed are not of this class. The specialized knowledge required by these men is set forth in the requirements of the different grades of certificates they must secure from the Government boards to hold their positions. The technical schools find here a sphere in providing instruction in this specialized knowledge. In constructing their courses of study for this purpose the schools are co-operating very closely with the authorities that prescribe the requirements and control the examinations.

Technical Courses in Electricity

A similar field for the employment of trained men is found in connection with electrical power development, transmission, and distribution. Between the requirements of persons engaged in what may be called the electrical trades, such

as house-wiring, line construction, armature winding, etc., on the one hand, and the employments demanding engineering training, on the other, there are large numbers of persons connected with the construction, the operation, the maintenance, and the testing of electrical machinery and equipment who require specialized knowledge as well as skill.

Technical Courses in Mining

The mining industries of the Province also call for the employment of men in a variety of occupations both at the mines themselves and in the mills and smelters where accuracy and efficiency is dependent upon intelligence and knowledge as well as experience. The need for the training of such men was early brought to the attention of the Department of Education and one of the first of the technical schools to be established was organized to meet this need. Two such schools have been established, one at Sudbury and one at Haileybury. Each school has had the hearty support of the engineers and mining men of these districts. These schools have provided useful training for the mining industry and have been the means of directing an increased proportion of the youth of the communities to this industry. As a rule, the graduates of the schools enter the industry as assistants in some of the departments, but many of them, with experience, come to occupy positions of responsibility.

Technical Courses for Mariners

Another field for instruction in specialized knowledge has developed in connection with the requirements of men engaged in the merchant marine service of our lakes. The demand for theoretical instruction, especially for engineers and masters and mates, has been urgent and the provisions for technical education have been taken advantage of for the organization in a number of our lake ports of winter technical courses for this purpose. Previous to the organization of such schools, men had to depend mainly upon private coaching. Here again the knowledge required, while directly of a technical character, is not covered by the general engineering courses of the university.

Technical Courses in Other Departments

I need not add further illustrations. In the industries I have named and in many others, such, for example, as the pulp and paper industry, textiles, and railway operation, there is a demand for men with training in technology of a higher grade than that required in semi-skilled or skilled work, but with requirements lower than those expected of the engineer. Roughly, this intermediate field includes men engaged in operation and maintenance rather than in design and direction. Such men require the essentials of a good secondary education and specialized knowledge, varying with the type of the occupations. Our technical schools are endeavoring to give men a theoretical and practical training for this field.

Progress During the Year

I have been referring to the general advance in technical education during the first decade. The progress made during the year has also been very satisfactory.

As usual, the evening class work has continued to expand. The records show an increased enrolment of over a thousand pupils. New schools were opened at Perth and Hespeler. The range of subjects covered by the classes has also been widened materially.

It is generally agreed that if the enrolment in evening classes is 2% of the population, the classes are meeting reasonably well the needs of the community. The enrolment at Ottawa this year is approximately 5% of the population and in a number of other places, notably Brantford, Gananoque, London, Niagara Falls, Oshawa, and Owen Sound, the enrolment is from 3% to 4% of the population. It is evident that in such places the advisory committees and the principals are providing very excellent facilities for adult education and that a very strong public sentiment in support of evening classes is being developed.

Satisfactory progress has also been made in the organization and development of day schools.

The new building at Niagara Falls, erected to provide accommodation for the vocational classes, described in my last annual report, was formally opened in the autumn of 1921. The response to the larger opportunity for training offered by this new building was most gratifying to the local school authorities. At the end of the term the enrolment in the vocational departments was as follows:—Industrial course for boys, 58; Industrial and Home-making courses for girls, 12; Commercial, 70; Total, 140.

The new wing of the Fort William Collegiate Institute devoted to technical education was opened in September, 1921. The enrolment in the industrial department for boys was 26 and in the commercial department 108.

The new technical and mining school building at Sudbury was also opened for classes in September. Here again the response to improved facilities for vocational training was most gratifying. The enrolment at the end of the term in the different departments was as follows:—Mining, 31; Industrial (boys), 27; Commercial, 39; Home-making, 12; Special Part-time Home-making, 17; Total, 126.

Any doubts as to the need of the school that may have existed in the minds of the school authorities or of the ratepayers of Sudbury were swept away by the general interest which the opening of the school aroused in the community. Two interesting features of the enrolment illustrate the principle, frequently noticed when new schools are opened, that increased facilities and improved equipment in the school system bring into the schools unexpectedly large numbers of pupils. As the school is primarily a mining school, it was not intended in the original scheme of organization to offer an industrial course for boys. Such a course, however, was provided. On the day the school was opened only one boy presented himself for enrolment in this course. The next day another applicant enrolled. From time to time other applicants appeared until at the end of September there were nine in the class. In October the number grew to 11, in November to 16, and in December to 19. On opening the school in January, there were 27 boys enrolled in the industrial course and all were attending with great regularity.

The other interesting feature was the establishment of a part-time class in home-making for young women. The possibility of such a class was canvassed, and as the prospects seemed favourable, it was advertised. The record of enrolment in this class was similar to that in the industrial class for boys. A few joined at first, then another, and another until by January there were some twenty young women enrolled. The students attended the school three afternoons a week to take cooking, sewing, house management, and home nursing. The members of the class were all young women living at home, most of whom had already received a general high school education. This was an opportunity for service of a very desirable kind which was not definitely recognized when the need for a technical school

in Sudbury was being considered. There is little doubt that in every town as large as Sudbury there is a considerable group of young women living at home who would avail themselves of such an opportunity.

It should, however, be noted that the success of these two classes was due, in a large measure, to the enthusiasm and the efficiency of the teachers in charge of these departments as well as to the excellent accommodations and equipment provided by the school authorities.

New Building Projects

Sault Ste. Marie has under construction a new building to be specially devoted to vocational education. It provides accommodation for industrial and technical classes, home-making classes, and commercial classes, at a cost of approximately \$225,000. The building is being erected in a central location, conveniently situated for both day and evening classes. It is expected that the building will be ready for occupancy by September, 1922.

The erection of the new Collegiate Institute and Technical School at Sarnia has proceeded rapidly, and the building will be ready for use in September, 1922. Plans for this building are shown in my report for the year 1919, but on account of the high cost of construction, the erection of the building was postponed for a year. This postponement resulted in a very substantial reduction in the cost. This school will provide in one building for all types of secondary school education at a cost for building of \$570,000.

In Hamilton, the main building which is to provide class-rooms, laboratories, administration offices, assembly hall, and gymnasium, for the technical school, is being erected this year, and will be ready for use in September, 1922. Some five years ago the first unit or shop wing of the building, was erected, and in it temporary accommodation was provided for class-rooms. This accommodation was soon found to be inadequate, and the erection of the main building became necessary. In addition to the accommodation already mentioned, the new building provides permanent and adequate accommodation for the art school. The total cost of this structure will be about \$800,000.

The Technical Education Board for Windsor and Walkerville, authorized under special legislation secured at the last session of the Legislature, was organized early in the summer of 1921, and proceeded to attack with promptness and energy the problem of providing a new technical school building. It determined the accommodation to be provided, selected and purchased a site, obtained plans by a competition restricted to the architects in Windsor and Walkerville, and appointed an architect. The final plans and specifications were approved by the Department of Education in December and at the same time an agreement was signed by the officers of the board and the Minister of Education, providing for a grant on the capital cost of the building.

In the meantime, an estimate of the cost of the building, viz., \$800,000, had been obtained and the respective shares of Windsor and Walkerville determined. The requisition for the money was made in October, and the money was voted unanimously by both councils in November. As soon as the agreement with the Government was signed, the contract was let, and material was being placed on the ground before the opening of the year.

When it is remembered that this board came into existence in April, and that before the end of the year they had purchased a site, adopted plans, entered into an agreement with the Government, provided \$800,000, and let the con-

tract for the building it is evident that much credit is due the members of the board for the efficient and business-like way in which they discharged their responsibilities.

Plans for new secondary schools of the composite type have been prepared for St. Catharines, Kitchener, and Guelph, and the funds have been provided or promised in each case for building purposes. Actual construction of the buildings has not yet begun, but it is expected that definite action will be taken shortly by each of these places.

Some Interesting Features of the Year's Work Noted by the Organizers

The City of Port Arthur has a municipal telephone system. The management found it difficult to secure men skilled in the work of wiping telephone cables. Through the city council a request was made to the advisory industrial committee to provide an evening class in this work. A class was formed, and the men engaged in cable work attended two evenings a week to learn and practise the art of splicing, sheathing, and wiping telephone cables. Excellent work was done, and the effect was felt in the better product turned out by the men on the job.

Another notable feature of the work in Port Arthur is the advisory committee's plan for instructing helpers and apprentices in the plumbing trade. Hearty co-operation has existed between the master plumbers, the journeymen, and the apprentices attending the class. No apprentice or helper can become a journeyman until he has passed an examination conducted at the school by the Examining Board of the Twin Cities. Prizes for progress are offered by the master plumbers. The prizes for this year were presented at a banquet held at the end of the term, attended by master plumbers, journeymen, and apprentices.

In a number of places, Rotary Clubs, Kiwanis Clubs, and other clubs engaged in public welfare movements interested themselves in the evening classes. In Oshawa, for example, the Rotary Club has been very active in co-operating with the school authorities in promoting vocational classes. The evening school enrolment was increased from 73 in 1920 to 311 in 1921. In Windsor, a list of the members of the Rotary Club, with the classification of each member shown, was sent to every boy likely to leave the secondary school. Each boy was asked to mark on the list the vocation or business which he would prefer to follow, and the Rotarian connected with that vocation or business undertook to give the boy an interview, and to discuss with him the advantages and disadvantages of the vocation, the kind of preparation needed, the time of service, and the possible rewards. This is a very practical kind of vocational guidance.

In Ottawa, a leading department store engaged one of the teachers of dress-making in the technical school to give in the store a series of ten-minute talks daily on the choice of materials and the methods of home dressmaking. In featuring in their advertisements the connection of the lecturer with the technical school, the firm paid an unconscious tribute to the value of the instruction given the pupils in attendance at it.

Summer School Courses for the Training of Vocational Teachers

The need for providing means for the professional training of teachers of vocational subjects has become urgent. During the winters of 1919 and 1920, evening classes for the instruction of teachers were held at Toronto, Hamilton,

and London, and a number of the teachers on the staffs of these schools qualified for Interim certificates through attendance at these classes. But it was manifest that the training of teachers through evening school instruction could not be extended to all parts of the Province and some more adequate means of training had to be sought. A summer school for this purpose was opened in the Central Technical School, Toronto, in 1921. The session extended from July 4th to August 5th.

Three classes of persons were admitted to the school: (1) Teachers of trade or technical subjects holding temporary certificates, (2) other persons looking forward to teaching in a vocational school, who could submit satisfactory evidence of possessing the essentials of a fair English education, and of having approved technical or trade experience in the subject they expected to teach, (3) teachers holding certificates in domestic science who wished to take the practical course in dressmaking.

Travelling expenses and a living allowance of \$1.25 per diem were paid to all teachers finishing the course, provided they were teaching in one of the vocational schools of the Province.

An introductory course was provided for persons who had had no previous training in teaching and school management, and an advanced course was offered for those who had previously taken one or more of the evening school courses.

The course of study offered included (1) The aims of education and general principles of teaching, (2) Special methods of instruction as applied to vocational subjects, (3) The analyses of the related knowledge and the mechanical operations of different trades, (4) The preparation of courses of study for these trades, (5) Construction of lesson plans.

Nineteen teachers were enrolled in the first year's course for men and ten in the advanced course; forty-three teachers were enrolled in the first year's course for women and one in the advanced course.

The enrolment in the men's classes included teachers of motor mechanics, machine shop practice, draughting, electric wiring, power plant engineering, electrical testing, electrical design, machine design, and horology.

In addition to the general class work, the women took practical instruction in special methods in millinery and dressmaking. Teachers who already held certificates in domestic science took the special methods in dressmaking.

In spite of the extremely hot weather of the summer, nearly all of those who enrolled attended regularly to the end of the course, and tried the prescribed examinations. In the advanced courses, six men and one woman completed satisfactorily the courses of study, and were awarded interim certificates to teach the particular trade or subjects in which they were trained.

In the first year course nineteen men and thirty-four women completed satisfactorily the course prescribed. These teachers will be required to complete a second summer course to obtain an interim certificate.

All persons now teaching on temporary certificates in day vocational schools will be required to qualify for interim certificates by September, 1924.

Co-ordination of Types of Instruction

The Industrial Educational Act as passed in 1911, provided for vocational instruction only in industrial and technical subjects. Later, the Act was amended and its scope widened to include provisions for commercial and agricultural subjects as well.

But the plans for administration, supervision, and support by Government grants differed with the different types of instruction. The growth of each type was more or less hampered by these varying conditions, especially in schools where more than one form of instruction was offered. By the Vocational Education Act of 1921, the different forms of vocational instruction were co-ordinated, and all vocational schools and classes placed on the same basis. The passing of this Act marked another important step in the advancement of vocational education.

The Vocational Education Act of 1921

This act, which repealed the Industrial Education Act, provides for the establishment and development of vocational schools giving instruction in industrial, home-making, art, technical, commercial, and agricultural subjects. The schools may offer full-time day courses, part-time day courses, and evening school courses of instruction,

All courses are designed to give, as a basis of citizenship, instruction in the essentials of a general education and at the same time a specialized training in the subjects, processes, and operations which are fundamental in the fields of work in which young people will seek employment.

The act provides also that any municipality may establish one or more schools or departments for instruction in the subjects mentioned above either as separate schools or as departments in a secondary school. Such vocational schools or departments are to be under the control and management of appropriate advisory committees. These committees have power, subject to the approval of the Minister and of the board, to provide a suitable site or building and adequate accommodation, and to prescribe courses of study and provide for examinations and diplomas. Subject to the approval of the board, the committee may employ teachers, fix their salaries, and submit annually an estimate of the amount of money required to carry on the work of the school.

Under the Vocational Education Act and the regulations pertaining thereto, vocational schools or departments shall be entitled to annual grants to be paid out of any moneys appropriated by the Legislature for industrial, commercial, **technical, or agricultural** education. These grants are paid on the expenditures made for salaries, equipment, furniture, or buildings. The grants to vocational schools are, under the regulations, calculated on the same basis for all types of schools or departments.

Changes in the Staff of the Technical Education Branch

Dr. James C. Miller resigned his position as Assistant Director of Technical Education in September to accept the professorship of vocational education in the University of Indiana. Mr. F. P. Gavin, one of the organizers of the Technical Education Branch, was promoted to the Assistant Directorship. The vacancy on the staff of organizers was filled by the appointment of Mr. Milton A. Sorsoleil.

Mr. Gavin, before he came to the Department of Education, was principal of the Windsor Collegiate Institute and was generally regarded as one of the outstanding men among the high school teachers. He was specially successful in organizing industrial and technical classes. He had been an efficient member of the staff of organizers and his promotion was well merited.

Mr. Sorsoleil is an Honour graduate in English and History of the University of Toronto and a specialist in commercial work. He had given excellent service first as a master and afterwards as principal of the Normal Model School at Toronto. His appointment therefore, is also a promotion within the Depart-

ment of Education. He is a man of energy and ability with personal qualities which specially fit him for the work. He will be connected more directly with the commercial department of the Technical Education Branch.

Some Important Problems of the Immediate Future

The operation of the Adolescent School Attendance Act introduces important problems that must be solved in the immediate future. The most important of these is the establishment of part-time courses for those who hold home permits or employment certificates under this Act. As has been pointed out from time to time in my reports, part-time courses of instruction have been voluntarily organized in co-operation with industries in several of the day technical schools. But after September, 1922, all school boards in urban municipalities with a population of 5,000, or over, must make provision for the establishment of part-time courses, and all young persons between fourteen and sixteen years of age, who are at work, must attend school at least four hundred hours per year. After September 1923, the same municipalities must extend their courses to give instruction to workers between sixteen and eighteen years of age for three hundred and twenty hours per year.

While the responsibility for establishing these courses rests with the municipalities, the Department of Education must be prepared to give direction and assistance to boards and advisory committees. As a matter of fact, all the steps that have been taken in the direction of establishing vocational classes and schools have had in view a permanent organization which would provide satisfactorily for compulsory part-time courses as well as for full-time instruction in academic and vocational subjects. Classes established and maintained under the Vocational Education Act will be found, as a rule, most suitable for all workers who have reached the fourth book standard of the public school, because all part-time courses of study planned under this act to meet the needs of employed boys and girls must provide instruction in the subjects of a general education as well as a training in the subjects, processes, and operations which are fundamental in the commercial, agricultural, home-making, art, or industrial occupations in which young persons are actually engaged or into which they wish to enter. On the educational side, therefore, the enforcement of the Adolescent School Attendance Act will not only give a great impetus to the establishment of vocational education, but will present important problems in organization and administration that must be solved.

The problem of providing more satisfactory means for the vocational training of teachers is also to be solved. The temporary provisions made through evening classes and summer schools are inadequate. Either a special department should be added to one of our present professional training schools or an independent college for the purpose should be established.

Action has been delayed through the negotiations which have been taking place for the organization of a Dominion College maintained and supported in part by the Dominion Government and in part by the Province in accordance with a co-operative agreement. Such negotiations have been carried on for about two years, but it would now appear that a plan for co-operation on the proposed basis cannot be carried out.

Statistical Reports

The statistical reports will be found on pages 248-263.

Lanark and Finch from two to three teachers, Powassan from one to two and several schools are attempting to carry on with an attendance that is entirely too large for the staff.

This increase in attendance is due to several causes of which probably the most important is the present business depression which has resulted in lack of employment in the industries. The increase in the number of boys and in the proportion of boys to girls in the schools is quite apparent. The Adolescent School Attendance Act has also been an important factor but apart from these two causes there is a more general recognition of the need for a better education as a preparation for the work of life and a very general demand for better educational facilities. An improved financial condition has enabled many parents to give their children access to the educational opportunities of the district that was formerly impossible.

New Schools

The increased grants to Continuation Schools and the amendments made to the Continuation Schools Act whereby the county is required to pay the cost of maintenance of all county pupils and a proportionate share of 80 per cent. of the cost of building, and adjoining counties are required to pay 80 per cent. of maintenance and a share of 80 per cent. of building, have placed Continuation Schools within the reach of all. In a number of places several school sections have formed a union for the purpose of maintaining a continuation school, and even single sections in the open country are now establishing Grade C Continuation Schools in which the pupils are receiving two years of the High School course. In all, seventeen new Continuation Schools were established in the Province last year and I am convinced that one hundred more could readily be established in rural districts if School Boards were aware of the generous financial provision made for the maintenance of these schools.

The attendance in a number of the Continuation Schools has grown until the attendance warrants the employment of a third teacher. When such a school is located in one of the larger centres of population which is prosperous and gives assurance that the attendance will increase rather than diminish, there should be no delay in giving such a school the status of a High School. Grants to Continuation Schools are apportioned for only two teachers, and on the new basis for apportioning grants to High Schools, a three-teacher High School will receive larger grants than a three-teacher Continuation School.

For the past year or two there has been a financial benefit in remaining a Continuation School and because of this a number of schools have remained as Continuation Schools that should have been given the status of High Schools. Several schools in the Northern and Eastern division of the Province could, with profit, take this step. Such schools as Huntsville, Westboro', Mimico and Lakefield might well do so at once and others as Lanark, Finch, Marmora and Millbrook might remain as they are for a year or two until it can be seen whether the attendance will remain permanent. In the case of some schools that now have a large attendance, it may be that the establishment of other Continuation Schools in the vicinity would decrease the attendance. If the establishment of other Continuation Schools would give better service to the children of the district, without unwise expenditure of money, it would be better to do this than to attempt to build up a large school at one centre.

Supply of Teachers

For the past four or five years there has been an increasing scarcity of teachers due, as everyone knows, to inadequate recompense and the greater attractiveness of other occupations. Owing to the scarcity and in no small measure to a federation formed among the teachers, salaries have increased until, with care, it is now possible for a man engaged in teaching to live with some degree of comfort and assurance regarding his old age. A maximum seems to have been reached during the past summer and it remains to be seen whether present salaries and working conditions will attract young, energetic and capable teachers, both men and women, in sufficient numbers to carry on the various departments of the work that must be carried on if our youth is to receive the education and training necessary as a fair preparation for the duties of life.

The great majority of the teachers who every year enter other occupations are lost to the teaching profession. Those qualities that make for success in teaching are the qualities needed for success in any other occupation, and notwithstanding the severe business depression of the past year very few teachers are returning to the work. But the higher salaries, the increased public interest in education and the broader field of work that is opening up, adding new interests and giving greater opportunity for service and reward, are attracting a greater number of young men and women into the work. The attendance at the training school is larger this year than last and the number of young men is greater than for many years. The effect of the reorganization of the High School courses and of the examination system will not be felt for another year or two.

Possible Results from Recent Re-organization

While it is too early to determine with any degree of accuracy what results will follow from the recent reorganization of the work of the school and of the system of examinations, one may be permitted to forecast some of the possibilities. Since the work to the end of Normal Entrance or of Junior Matriculation may be covered in three years, but it is impossible to get both in three years, and since the average student would be too young and immature to enter Normal School or to profitably enter upon a course at the University after a High School course of three years, it should be possible in many Continuation Schools with the active support of the School Boards to introduce special two-year courses in one or more of Elementary Agriculture, Household Science and Commercial work, and thus make the service given by the school cover a full four years' course for all pupils.

Owing to the increased attendance many of the schools need the assistance of a third teacher and an ideal condition could be brought about if each of the teachers was prepared to take charge of one of the special courses mentioned. Liberal grants are offered for efficient work in these departments and these grants would go far to defray the cost of the additional teacher.

It is conceivable and very desirable that these Continuation Schools should become centres about which winter schools or evening schools would develop so that the school may be made to serve the needs not only of those pupils who have reached the standard of Entrance to High Schools but of all the youth of the locality. To argue the question as to whether it would be better to extend the services of the schools that already exist or to establish other schools whose special duty it would be to look after the special education and training of adolescents who do not wish to take the usual academic courses of the High School would take me beyond the bounds of this report.

Graded and Ungraded Schools in Relation to Entrance Examination

Early in the past term I noticed what seemed to be a difference in age and size of pupils who enter the Continuation Schools from the ungraded rural schools and from the graded schools of the village or small centres of population. So decided was this difference that I have made inquiries into this matter in most of the schools visited during the term and it is usual to find the average age of pupils from the ungraded school to be much below that of the pupils from the graded schools. This difference in average age varies from one month to two and one half years. Occasionally the average age of the graded school pupils is below that of the pupils from the ungraded school but in such case the difference is small and if it occurred in one school in any inspectorate it was likely to occur in other schools in the same inspectorate.

While my investigation into this matter was not exhaustive, I saw enough to convince me that a condition exists that requires serious attention. If it is true that the country pupils, who walk from one half to two miles to an ungraded school through all kinds of roads and weather, make more rapid progress than pupils who walk a few blocks to a graded school, it will form one of the strongest arguments against consolidation. From my investigation I do not believe the rural child to be any brighter or to have better natural ability than the village pupil. Rural pupils who walk a mile or two to the village school do not make more rapid progress than the village pupil.

Many factors may combine to cause this condition. It might arise from too frequent changes of teacher, but these changes in the ungraded schools are more frequent than in graded schools. Frequently, retardation of pupils is caused by overloading the teachers, particularly the primary teachers; but the evils that arise from overloading the teacher should be greater in the ungraded school with from six to eight classes than in the graded village school with its one, two or three classes. It may be thought that country pupils have fewer distractions and apply themselves more diligently, but I am not at all sure that country pupils who walk to the village school make more rapid progress than the pupils resident in the village. The educational atmosphere of the locality is a matter to be considered but it would be difficult to prove that the influence of this factor was not as great in the village as in the country.

After some consideration of the matter I am convinced that the retardation of graded school pupils arises because of the more rigid system of promotion examinations and the larger classes. It is agreed that the average age of pupils entering High or Continuation Schools should be earlier than at present and nearer thirteen than to fourteen years of age. If this is to be accomplished the system of yearly promotion from room to room must be very effectively modified. A thorough examination of this matter by those responsible will, I am sure, result in benefit to both pupils and teachers.

Temporary Certificates

Owing to the scarcity of teachers during the school year 1920-21, and to the reluctance of School Boards to offer, early in the summer of 1920, the salary necessary to secure qualified teachers when such were available, it became necessary to issue more than the usual number of temporary certificates or to allow some schools to be closed. Some Boards were convinced that there were plenty of teachers but that they were holding back for higher salaries on the advice of

the federation of teachers and claimed to believe that teachers would be plentiful about the time for opening schools. As a result several schools were without teachers when the opening day came and several others had accepted teachers with varying degrees of qualifications on various pretexts.

Any experienced teacher knows that the wisest thing to do at times is to look out of the window, and that plan is occasionally followed by the Inspector. However, just as there are pupils who will persistently take advantage of leniency and attribute it to weakness on the part of the teacher, so, occasionally, there are school boards that will comply fairly with the regulations only when they know it is very dangerous to do otherwise. To issue Temporary certificates except when absolutely necessary is the surest way to depress the standard of the teaching profession and to belittle the teacher's position in the minds of the people of the locality in which such a teacher holds a position. To lower the standard inevitably increases the instability of the profession and this instability is the greatest cause of waste in the efforts made to get efficiency in educational work. The investment in public education yields but a small part of the returns it could be made to yield were the teaching body stable and adequately prepared for its duties and responsibilities. The change made in the regulations relating to attendance at Summer Schools, whereby the Department makes an allowance of one dollar and a quarter per day and railway expenses, will go far to remove the necessity for Temporary certificates.

Means of Equalizing the Cost of Secondary Education

During the past two years much has been done to put secondary education within the reach of all if school boards will avail themselves of the generous financial provision of the Continuation Schools Act. Yet there are inequalities and what might be termed injustices. For example, people who live *near* but not *in* a High or Continuation School district may have their children educated at the expense of the County, while those who live *in* such a school district have to pay the full cost of educating the children of the district, apart from the Legislative grant, and at the same time help to pay for educating the children from the County outside the school district. In other words, where the ratepayers of a school section, a union of sections, or a municipality are sufficiently progressive to establish a secondary school they must levy a heavy tax on themselves that the ratepayer outside such a school district escapes, although he may have the advantage of the school for his children at the small cost levied by the County for the cost of educating County pupils, which would not likely be more than one-quarter mill.

The children of parents living *near* but not *in* the school districts who attend these schools pay no fees and the parents pay only the County levy for cost of education of pupils at secondary schools which is from one-fifth to one-fourth of a mill.

This County levy is also paid by all ratepayers in the High and Continuation School districts. Therefore, the ratepayers living *in* the High and Continuation School districts pay from five to twenty times as much for secondary education as the ratepayer outside but near such a district.

It is reasonable to expect that the ratepayers in the section or municipality in which the school is located should pay more than those at a distance, but be-

cause of the present arrangement it is difficult to induce the ratepayers of sections near established or proposed schools to join with other sections to help to maintain the school. Why should they? They get the advantage without paying anything beyond the County levy.

Under Sections 8 (1) and (2) of the Continuation Schools Act the County Council has authority to contribute such further sum as it may deem expedient toward permanent improvements or to maintenance of Continuation Schools in the County, but few County Councils will pay more than is required by law.

Inequality of Educational Opportunity

On occasions many are fond of proclaiming that it is the aim of the Department of Education to provide all with equal educational advantages as far as this is humanly possible. I am confident that the people of the Province of Ontario are both able and willing to pay for good educational advantages for all if we can direct their thoughts aright. Without interested parents there can be little real progress in educational affairs. It is a problem of salesmanship: we have something to sell and our proposition must be attractive both as to quality and cost.

It must be apparent to all that in localities outside of the cities and large towns little public money is expended for the benefit of that great body of youth who leave school before reaching the standard of Entrance to the High Schools. By far the greater part of the public money that is expended for educational purposes is for the benefit of the relatively few who have some aptitude for absorbing book information, an opportunity to attend a good school and a willingness to bear the restraints of school life. Have the others who drop out at an early age from various causes no claim to a fair share of public money so that they may develop the abilities they possess? In the cities, where is to be found the large mass of the foreign born, the children are having educational advantages not dreamed of in the country. This is possible because of the concentrated wealth of the cities, but the Province has the duty and the responsibility to provide similar educational advantages in rural districts. Many parents leave the farms and cease production just to give their children the better educational advantages of the town. Such parents should not be blamed as they are doing just what they should do until the State has provided them educational advantages which permit their children something like an equal chance with others. Rural children should not be penalized because they elect to remain on the farms.

The average parent believes in the need for a better education for the youth of fourteen, but he feels that the ordinary work of the local school is not what that youth needs. To insist that rural and village pupils shall comply with the provisions of the Adolescent School Attendance Act and continue at school until they reach the age of sixteen, when all that is offered them is a little more grammar, geography, history, etc., taught by a young girl, is futile.

The whole problem of public education of adolescents in rural districts must be taken vigorously in hand and the most earnest thought of the best minds concentrated on it. Higher levels can be reached in either the standard of education and training now given in the schools, or in the extension of the service given by these schools to a greater body of youth, only by conscious adoption of a policy toward that end. This policy must meet the needs of those for whom it is undertaken as without public recognition of the need for improvement there can be little progress.

II. REPORT OF INSPECTOR HOAG

TO THE HONOURABLE R. H. GRANT, M.P.P.,

Minister of Education for Ontario.

SIR,—I beg to submit for your consideration a brief report on the general condition of the Continuation Schools which have been under my supervision for the year 1920-21.

I have the honour to be, Sir,

Your obedient servant,

J. P. HOAG.

TORONTO, January 24th, 1922.

Schools and Teachers

During the year 1920-21, I had inspectoral supervision of those Continuation Schools situated in the western peninsula of Ontario, between Georgian Bay and Lake Erie, and along the main line of the Canadian Pacific Railway from Sudbury to Keewatin. The schools in this inspectoral district may be described as follows:

No. of Schools.	Description.	No. of Teachers.
18	Each employing 1 teacher	18
4	Each employing 1 full time and 1 half time teacher	8
59	Each employing two teachers	118
5	Each employing 2 full time teachers and 1 part time teacher	15
— A total of 86 schools and		159 teachers.

Inspectoral Visits

Under the regulations of the Department of Education, it is necessary to spend one day of inspection for each teacher on the staff of a school. In many cases, local conditions or changes in staffs may make it necessary to visit a school a second, or even a third time during the year. During the past year it has been found necessary to visit a number of places to discuss with trustees and ratepayers the question of establishing new Continuation Schools. As many of the Continuation Schools are situated on branch lines of railway or at some distance from a railway, it is easily seen that the time of a Continuation School Inspector is pretty fully occupied.

I am pleased to report that I have been able to visit each school during the school year and to make additional visits where this was found necessary.

In my visits of inspection, I have very often been accompanied by the local Public School Inspector. It is my duty and privilege to acknowledge the great assistance I have received from the local Inspectors, whose knowledge of local conditions is necessarily far greater than mine. Indeed I feel sure that the active sympathy of the Public School Inspectors has been one of the main factors making for the success of the Continuation School movement. In almost every case where a new Continuation School is established, it is the local Inspector who takes the initiative in opening the question, and when the Continuation School Inspector visits the locality concerned, it is the local Inspector to whom he turns for advice and assistance.

Increased School Attendance

On September 1st, 1921, Part I of the Adolescent Schools Act came into operation. Under this Act, all pupils must continue to attend school up to the age of 16 years. This has resulted in a very largely increased attendance at all High and Continuation Schools. In some cases the attendance has increased from 50 to 100 per cent. over that of the previous year.

In addition to the effect of the Adolescent Schools Act, the industrial depression has led to the return to school of some pupils who had been previously employed and to the continuance at school of many who would otherwise have dropped out.

School Accommodation

Because of the increasing attendance at all secondary schools on account of the Adolescent Schools Act and the industrial depression, many Boards of Trustees have found it difficult to provide accommodation for all the pupils seeking admission. Indeed in some cases local Boards of Trustees have notified County Councils that after September, 1922, it would be impossible for them to provide for rural pupils who might present themselves for admission. Naturally rural school boards and other rural municipal bodies have found it necessary to carefully consider ways and means for providing opportunities for secondary education for the children of rural districts. As a means of meeting the need they have turned to the establishment of Continuation Schools.

New Schools

In the fall of 1922, 17 new Continuation Schools were established; 11 of these in the district under my inspection, and 6 in that under my colleague. In addition to this a large number of public meetings have been held in villages and rural schools for the purpose of discussing matters connected with secondary school education. Inspector Mills and myself have attended many of these meetings and we have already arranged to attend many other meetings of a similar nature during the winter of 1922. Rural school boards and other municipal bodies are becoming aroused to the need of providing better educational advantages for country children. When the generous grants given by the Legislature toward maintaining Continuation Schools have been explained, I have found rural school authorities anxious to go forward. It is safe to say that a larger number of new Continuation Schools will be established during 1922 than in any previous year. Wherever a consolidated school is established, it is certain that a Continuation School will form its highest part. Indeed one of the great arguments for consolidation of schools in any district is that consolidation will provide opportunities for secondary school work.

In connection with the movement to establish Continuation Schools, I feel it a pleasure to acknowledge the assistance and sympathy shown by Mr. W. I. Chisholm, Assistant Chief Inspector of Public and Separate Schools. Because of his extensive knowledge of rural school conditions in the Province, Mr. Chisholm has been able to point out several localities where Continuation Schools were needed. As a result, I have been able to meet ratepayers and school boards in a number of places to confer regarding school matters. A number of Continuation Schools have been established because of the active sympathy and support of Mr. Chisholm.

New Course of Study

The Committee appointed by the Minister to discuss the High School Course of Study and to make such suggestions as it deemed wise made a report in the spring of 1921. Because of this report and on the advice of the Ontario Educational Association a new Course of Study for High Schools was arranged. This new course went into effect in September, 1921. Circulars had been prepared and sent out by the Department of Education in June and August previously. These circulars fully explained the new course of study, but as many of the teachers of the Continuation Schools are young and inexperienced and as there appeared to be very considerable anxiety among these teachers as to how to put the new course into operation, Inspector Mills and myself prepared a circular letter which we sent out to every school so that it would be in the hands of the Principal on opening day. I am glad to say that the teachers have found the new course workable and a decided improvement over the old in that less home work is required and more time is available for school room study because fewer subjects are now taught in one year. The following is a copy of the circular.

Toronto, September 2nd, 1921.

To the Principal of the Continuation School.

Inspectors Mills and Hoag are sending out herewith suggestions regarding time tables for the school year just beginning. In making the suggestions the Inspectors have in mind the new course of study. Principals will, of course, remember that these suggestions are only "suggestions," and are not necessarily to be followed by the Principals. Local conditions will always affect the arrangement of the time table.

Pupils who have completed the work of Form I, and have been regularly promoted to Form II, will not be required to take an examination in Canadian History or Geography in 1922. There will be no Departmental examination in Reading, Writing or Spelling for the Lower School. Full particulars regarding the new course will be contained in the circular which you will receive very shortly.

The Inspectors wish to emphasize the importance of careful direction and supervision of all seat work done by the pupils. Supervision will aid in the development of good habits of study and of neatness in arrangement of written work.

If the Principal desires to introduce any subjects other than those indicated in the suggestions herewith sent, the matter should be laid before the Inspector before action is taken, so that approval may be given if this is deemed wise.

There will, doubtless, be many matters which teachers may have difficulty with during the opening weeks of the school year. The Inspectors suggest that in any case of difficulty the teacher communicate with the Inspector in charge of the District in which the school is situated. Mr. Mills will be in charge of the Continuation Schools in Western Ontario and along the main line of the C.P.R., from Sudbury to Keewatin. Mr. Hoag will have charge of the schools in Eastern Ontario, on Manitoulin Island, on the north shore of Lake Ontario and from North Bay to Cochrane.

Suggestions for Time Tables for 1921-22

- (a) For one-teacher schools divide the day into 12 teaching periods; for one-and-a-half-teacher schools divide the day into 13 periods.
- (b) Forms I and II should be taken together in English, Botany and either in Grammar or Art. (If Grammar is chosen, interchange the names Grammar and Art in tables below).
- (c) Reading will form part of the work in English.
- (d) Spelling and Writing will be considered important in all subjects.
- (e) All seat work done by pupils should be carefully supervised so that pupils may form correct habits of study. Careless work should not be permitted.
- (f) Physical Culture should be taken at intermission for 15 minutes each day.

Grade C (One-teacher Schools.)

Subject	Form I alone.		Form II alone.		Forms I and II.		Form III.

APPENDIX D

REPORT OF THE INSPECTORS OF HIGH SCHOOLS

The Honourable R. H. Grant, M.P.P.,
Minister of Education for Ontario,

Sir,—

We have the honour to submit the following joint report of the condition of the High Schools and Collegiate Institutes of the Province for the year 1920-21.

J. A. HOUSTON.

I. M. LEVAN.

G. T. ROGERS.

Toronto, Dec. 31, 1921.

During the year all the High Schools and Collegiate Institutes in the Province have been duly inspected, each inspector having visited and reported on the schools allotted to him for supervision.

In a general way it may be said that the condition of the schools throughout the province is satisfactory. It is true that there is need of improvement in the character of some of the older school buildings which were erected at a time when the attendance was smaller and the needs in the matter of accommodations and equipment were less keenly recognized. With the improving conditions in the financial and labour markets, and with the additional financial aid offered to boards by recent legislation, it is hoped that the character of the school buildings will steadily improve. Already in several towns and cities plans for new buildings have been prepared and building operations will be undertaken in the near future. The school buildings of recent construction are generally satisfactory and recognize the need of suitable laboratories for the practical teaching of Science, of gymnasia for the work of Physical Culture, and of Assembly Halls for the meetings of all the pupils.

The character of the teaching is gradually improving. The Regulation of four years ago, requiring a University degree of all candidates for admission to the High School teaching profession, is gradually making its influence felt and is filling the High Schools with a more liberally educated and more widely cultured class of teachers. The attendance, which has been steadily growing, has created a demand for a greater supply of teachers; and as the supply has not kept pace with the increased demand, there has been a decided scarcity, which in some schools has caused serious embarrassment. But as a much larger number of students than heretofore is now in attendance at the Ontario College of Education, preparing to enter the profession of High School teaching, the prospects of relief from this embarrassing situation are cheering.

The year has been a notable one in the history of the High Schools, perhaps the most notable in all their history. Recent changes in legislation and in the Regulations are doing much to place the High Schools in a more favourable position to carry on their work more effectively and to widen the sphere of their influence. Among these changes are the following :

(a) The enforcement of the Adolescent Act in municipalities of 5,000 inhabitants or over.

- (b) The abolition of the tuition fees charged to local pupils.
- (c) Increased grants to High Schools.
- (d) Legislation requiring County Councils to pay a share of the cost of permanent improvements in High Schools.
- (e) Changes in the courses of study and in the examination system.

Any one of these changes would mark a great advance in the encouragement of secondary education, but their cumulative effect it will be hard to overestimate. They mean that the benefits of secondary education will be more widely distributed, that the severe strain on pupils and teachers will be greatly diminished without any sacrifice of efficiency, and that the expense of conducting a High School will be considerably lightened for the municipality in which the High School is situated.

The Adolescent Act

The Adolescent Act, passed by the legislature two years ago, was proclaimed effective last September in municipalites of five thousand inhabitants or over.

Under the provisions of this Act the age of compulsory education has been raised from fourteen to sixteen years. Heretofore a child on attaining the age of fourteen, or even at an earlier age if he had passed the High School Entrance examination, had the legal right to discontinue attending school. Large numbers availed themselves of this privilege. With their limited education these were poorly equipped to succeed in life in an age in which trained intelligence counts so much for success. Now the further education of such children will be cared for. Some will attend the High Schools, others the Vocational schools, and still others will continue their studies in the Public Schools. Already the effects of this legislation are being felt in the High Schools in an increase of attendance, an increase which is likely to grow to great proportions in the not distant future. It requires no great power of imagination to see that these two additional years devoted to education will materially raise the level of intelligence throughout the Province.

The Abolition of Tuition Fees

The abolition of tuition fees is a logical consequence of the enforcement of the Adolescent Act. To compel parents to keep their children at school for two more years and require them to be at the expense of paying burdensome fees would be manifestly unjust. For fifty years we have boasted that Public School education in Ontario is free. To this we can now add the boast that education in Ontario is free right up to the very gates of the University.

Increased Grants

During the last session of the Legislature the sum of fifty thousand dollars was voted as an addition to the former appropriation for High Schools. Regulations have been drafted for apportioning this additional sum. The help thus afforded will enable many struggling Boards to provide better facilities for carrying on their work and to employ a better grade of teacher.

Payment by County Councils of a Share of the Cost of Permanent Improvements in High Schools

For many years it has been a grievance with High School Boards that the County Councils were not paying a fair share of the expense of educating County pupils at such schools. In the past the County Councils have been required to bear a proportionate share in the cost of maintenance, but maintenance covered but a small part of the whole cost of education. Deputations have repeatedly represented the injustice of this to successive Ministers. Difficulties, however, were supposed to stand in the way of providing a remedy; and until the present year no legislative action has been taken to remedy the acknowledged injustice. But at the last session of the legislature the Minister introduced a Bill providing that County Councils should pay a proportionate share of the debentures issued for permanent improvements. After full discussion the Bill was passed.

The effect of this legislation will be far-reaching. It will undoubtedly result in improving the accommodations in many of the schools. Boards will now not hesitate so long to provide better accommodations when they have the help of the County in meeting their expenses. In many schools the need of better accommodations is caused solely by the presence of County pupils. In some cases, indeed, County pupils have been excluded from the High Schools because Boards have been unwilling to incur the expense of providing the additional room needed to provide for them. With the aid given under the provisions of this Act many Boards will now be able to replace buildings which have become antiquated or have proved too small for the growing attendance.

Changes in the Course of Study and in the Examination System

But a greater change and one that will have a much more far-reaching effect on the efficiency of the High Schools is that which has been made in the course of study and in the system of examinations. This change is so important that it deserves extended notice.

Until midsummer of the present year the schools had been working under a course of study that had been in existence since 1913. This course was a decided improvement on that which it replaced and it had many points of strength.

But time and experience exposed many weaknesses. It had a tendency to draft all pupils into the same courses, those for admission to the Normal Schools and for matriculation into the University. It made little provision for a large class to whom these courses made no special appeal, those who desired to secure a good general education without preparing for professional life. It was found, too, that the system made a severe draft on the physical energies of pupils by compelling them to carry an excessive number of subjects simultaneously. Besides, it was alleged that in the multiplicity of subjects to be studied sufficient time was not available for the mastery of important subjects and as a consequence the work done was of a superficial nature. It was further alleged that the system was characterized by too much rigidity and centralization, and afforded no encouragement to local Boards to offer special courses suited to local needs, so that there resulted a lack of local interest in secondary education and no attempt at local initiative.

The Minister, therefore, deeming that the time had arrived when the High School system was in need of thorough revision, in the midsummer of 1920 appointed a special Committee to deal with the situation. The Committee was

composed of representatives of the Provincial Universities, the Ontario College of Education, the Collegiate Institutes and High Schools, the Continuation Schools, the Public and Separate School Inspectors, and the Department of Education, and was instructed to "review the courses of study and the examination system and to consider any other question that affects the organization and efficiency of the schools."

This Committee met frequently and canvassed thoroughly the whole situation with regard to High School education. The members applied themselves earnestly to the task of devising a system which should provide suitably for modern educational needs without causing overpressure on pupils or teachers, which should give ample time for thoroughness in mastering important subjects, and should afford opportunity to Boards to choose courses suitable to special local needs.

In accordance with these aims the Committee drafted courses of study for the first and second years of the Lower School, for the Middle School, and for the Upper School. They proposed that only a few subjects should be obligatory on all pupils, and these chiefly in the Lower School. They suggested a list of optional subjects admitting of variation according to local requirements, adding a recommendation that a maximum and minimum should be set to the number of subjects to be taken by each pupil in the Lower and Middle Schools. The maximum was set at eight subjects and the minimum at five.

After completing this part of its work and before undertaking to revise the content of the subjects of study, the Committee submitted to the Minister an interim Report with the following recommendations:

1. That the High School course of study be a five years' course, consisting of a Lower School course of two years, followed by a Middle School course of two years, and an Upper School course of one year.

As the former Upper School course was a two years' course, the effect of this recommendation is to shorten the High School course by one year. Many pupils have been deterred by the former two years' Upper School course from continuing their studies beyond the end of the Middle School. It is believed that the shortening of the Upper School course will induce many pupils to remain in school until the end of the fifth year.

2. That Physical Culture be continued as heretofore as a compulsory subject in each year of the course.

This recommendation is a tribute to the excellent work now being done in the High Schools in Physical Culture. This subject has, in recent years, received systematic attention in the schools with results decidedly encouraging. Summer Classes have afforded teachers an opportunity of fitting themselves to teach this work; and there are now few schools in which there is not at least one teacher on the staff who is regularly qualified for teaching it.

3. That a limit be set to the maximum and the minimum number of subjects to be taken by each pupil in each year of the Lower and Middle School courses; and that the minimum be five and the maximum eight.

This recommendation marks an important change. Heretofore, with the large number of studies being carried on simultaneously owing to the exigencies of the examination system, it has been customary to organize the schools into ten or eleven periods a day, and in some cases, even more. Under this recommendation Principals will be able to organize their daily programme on a basis of eight or at most nine teaching periods of forty or forty-five minutes each. Important

subjects will receive a lesson each day, more teaching will be done in the school room, opportunity will be afforded for regular supervised study under the eye of the teacher, and the burden of home-work will be very materially lightened. Teaching will be more thorough and a greater mastery of subjects will be secured.

4. That candidates for entrance to the Model or Normal Schools be allowed to write on one or more subjects at a time in any order as approved by the Principal, and on obtaining fifty per cent. of the marks assigned to any paper they be given credit for having passed in such paper and receive a certificate of such standing.

This is a most revolutionary change. Its effects will be far-reaching in lessening the burden on candidates who are preparing for these examinations. To understand how radical is this change it is only necessary to recall the former examination requirements. Heretofore a candidate for the Normal Entrance examination had to pass a Lower School examination, on which he was required to write on eight papers simultaneously, and on a Middle School examination on which he was required to write on eight papers simultaneously. If he failed on two of these papers, he had to repeat the whole examination. To make matters more difficult, some of the subjects on which he wrote were taught in the year before the examination and had to be reviewed specially before he made his test. Under this new recommendation a candidate may if he pleases write on one paper at a time, and if he passes in it he will receive credit for it and will not be required to write on it again. Under the new system the schools can be so organized that four of these subjects may be written off in each of the two years of the Lower School and four in each of the two years of the Middle School. In the smaller schools or in the larger schools if deemed necessary the eight subjects of the Middle School course may be written off in one year. Thus it will be seen the scheme is flexible and is suited to the special requirements of the smaller as well as of the larger schools.

This recommendation has been accepted by the Universities with respect to the Matriculation examinations. Candidates for Matriculation were formerly required to pass simultaneously on at least nine of the twelve papers before receiving any credit. Now they may write on one or more papers as they please and they will receive credit for each paper on which they pass.

5. That the standard for passing on each paper should be 50 per cent.

Under the former system the standard was 40 per cent. on each paper and 60 per cent. on the total. Whether this change means a raising of the standard remains to be seen.

6. That a Graduation Diploma be granted to every High School pupil who passes an examination on twelve papers on the subjects of the Lower and Middle School courses, of which at least six papers must be on Middle or Upper School work.

The full force of this recommendation may easily be overlooked. Its purpose is to encourage the general student who has no desire to be a teacher or to enter professional life to continue his studies to the end of the Middle or even the Upper School course. The Graduation Diploma will be issued by the Department to every pupil who fulfils the conditions. It will contain a record of all the subjects in which the pupil has passed with pass or honour standing. Under the new scheme by which the pupil will receive credit for the separate subjects on which

he passes a satisfactory examination, the Graduation Diploma will be the only certificate which will show a complete record of all the subjects on which he has passed. It will, it is believed, be generally sought for, and will serve as a stimulus to every pupil to put forth his best effort in his studies. It will also have a commercial value, as it is expected that it will be the standard for proficiency in secondary education, and will be accepted *pro tanto* by all registering bodies.

7. That the following be the subjects of study in the Lower School course:

(a) Obligatory subjects :

English (Literature, Composition).

Canadian History and Civics, and Physiography (each for one year and not concurrently).

Algebra and Geometry (each for one year and not concurrently).

(b) Optional subjects :

Arithmetic, Grammar, Art, Geography, Botany and Zoology (or Agriculture and Horticulture), Latin, French, Greek, German, Spanish or Italian, Manual Training, Household Science, Music, Bookkeeping and Penmanship, Stenography and Typewriting. Additional subjects recommended by the local authorities and approved by the Minister.

Note :—Each of the following subjects is a one-year course, viz., Canadian History and Civics, Physiography, Algebra, Geometry, Arithmetic, Grammar, Art, Geography, Botany, Zoology.

It will be observed that this list not only includes the subjects that usually form part of the early years of the High School course, but it gives freedom to Boards to introduce other subjects that may seem to them desirable. It is not subject to the criticism that was directed against the former course that it was arbitrary and inflexible: for under this scheme Boards are at liberty to experiment in framing courses suitable to their needs.

The intention of the Committee in recommending that certain subjects be a one-year course, was not that these subjects should receive less attention than before, but rather that by concentrating on them by frequent lessons better results should be procured than before. For instance, it is thought that after a year of concentration on Canadian History and Civics the student will have a better knowledge of and a greater interest in the subject than under the former system.

It will be observed that the subjects of Reading, Writing, and Spelling, which formed a part of the previous course, are not mentioned in this scheme. It is not intended, however, that they shall be neglected. They are provided for in another way. Reading is to be taught where it logically belongs, in connection with the teaching of English Literature in all forms of the school. Correct spelling and legible writing are no longer to be the special care of one teacher, but are to be insisted on equally by all members of the staff.

Nor should co-operation end here. The teacher of English should have the assistance of every member of the staff in the matter of teaching English. In every class in the school, be it a class in History or Languages or Mathematics or Science, good English should be insisted on. Team work of this kind will, it is believed, give better results in English than we have yet had. Without team work the scheme, so far as English is concerned, will not yield the results that are expected of it. It should be the duty of every Principal to keep ever before the members of his staff the absolute need of co-operation in the matter of requiring good English in all exercises, oral or written.

8. That the following be the subjects of study in the Middle School :

Obligatory subjects :

English (Literature, Composition).

Optional subjects :

(a) Algebra, Geometry, Physics and Chemistry (or Agriculture), British History, Ancient History.

(b) Latin, Greek, French, German, Spanish or Italian.

(c) Manual Training, Household Science, Art, Music, Bookkeeping and Penmanship, Stenography and Typewriting. Additional subjects recommended by the local authorities and approved by the Minister.

As in the Lower School course, the subjects enumerated are those commonly studied at this stage of the student's career. But where desired the course may be modified to meet local needs.

Agriculture, it will be noticed, may be substituted for Physics and Chemistry. This is an entirely new departure. It is a recognition of the value of the study of Agriculture as a means of mental training as well as of its practical value in Ontario where agriculture is still the basic industry.

To prevent overpressure it is provided that each of the foreign languages in Group (b) shall count as two subjects where the two-year course is being covered in one year.

It is provided also that Upper School subjects may be taken in the second year of the course to make up the maximum of eight subjects.

9. That the following be the subjects of study in the Upper School course :

English (Literature, Composition), Algebra, Geometry, Trigonometry, Modern European History, Physics, Chemistry, Biology (Botany and Zoology), Latin, Greek, French, German, Spanish or Italian. Additional subjects recommended by the local authorities and approved by the Minister.

In the Upper School course the list of subjects includes those generally taken at this stage of the student's career: but, as in the Middle and Lower School courses, it may be modified to suit local needs.

It is also recommended that for the Upper School no subject should be obligatory on all pupils, nor should any minimum or maximum number of subjects be prescribed save by the local authorities.

These proposals of the Committee were submitted to the High School Principals and Teachers for consideration and discussion at their annual meeting at Easter this year. They were carefully considered and approved with scarcely a word of unfavourable criticism.

Encouraged by the general favour with which they were received, the Minister decided to bring them into effect without delay. Regulations were prepared for that purpose and the new course was introduced into the schools in September. There were difficulties, as was to be expected, in reconciling the new course with the old during the first year of its operation, as it was necessary to permit those who had begun their studies under the former system to complete them under that system. But these difficulties were reduced to a minimum by making liberal allowances to those whose interests were affected.

At the time of writing the new system has been in operation for four months. It has been warmly received by teachers and pupils alike. It seems already to be certain that the results hoped for will be realized. Longer lesson periods and

fewer lessons each day mean more teaching, more supervised study, less homework, greater concentration and more thoroughness in mastering the subjects studied.

The radical change in the examination system permits an organization whereby three or four of the examination subjects may be written off at the end of each year of the course without imposing an undue burden on the pupil. For example, in an ordinary three or four master school the programme of the first year might reasonably be Canadian History and Civics, Botany, Geography and Art as examination subjects to be written off at the end of the year, and in addition, to make up the maximum, English, Algebra, and (if desired) Latin and French. In the second year it might be Zoology, Physiography, Grammar, Arithmetic as examination subjects, together with English, Geometry and (if desired) Latin and French. In the Middle School the following subjects might be written off in the first year:—English, British History, Algebra and Chemistry; leaving the remaining examination subjects to be written off in the second year.

There has not yet been time to estimate the effect of the new course on the differentiation of the schools, but it is to be expected that in time schools will become individualized and will provide special courses to meet special needs.

The Committee is now engaged in revising the content of the various subjects of study so as to adapt them to the requirements of a modern system of education. This work will be completed in time to permit of the introduction of the whole system into the schools in September, 1922.

In view of all these changes and improvements, we feel justified in believing that the outlook for Secondary education is brighter than it yet has been.

APPENDIX E

REPORT OF THE INSPECTOR OF MANUAL TRAINING
AND HOUSEHOLD SCIENCE

To the Honourable R. H. Grant, M.P.P.,
Minister of Education for Ontario.

Sir,

I have the honour to submit herewith my twenty-first annual report on Manual Training and Household Science as carried on in the schools of the Province.

I have the honour to be, Sir,

Your obedient servant,

ALBERT H. LEAKE.

Toronto, January, 1922.

General Progress

The work has proceeded generally along the lines followed in previous years. New centres have been established in Toronto, Hamilton, Ingersoll, Chatham and Peterborough. New schools are being planned in several towns and cities and in almost every case provision is being made for manual training and household science. The introduction of these subjects into the schools of large towns and cities is not generally difficult, but in places with a population of five thousand or less the matter is not so easy.

As noted in previous reports there are some towns in the Province with a population of more than five thousand each that have not yet provided facilities for giving instruction in either manual training or household science. In towns of this size, if the work is properly organized, it should not be difficult to occupy the whole time of one teacher. He should be given charge of the whole of the manual work from Grade I to the end of the Public School course. In this way, a graded scheme could be carried on throughout all the forms of the school in that particular town.

Towns might well co-operate in this matter and employ a teacher between them. It should not be difficult to form a group of three or four towns within easy reach of each other, each having its own manual training centre and equipment and each paying its share of the special teacher's salary, according to the time spent in each place. Now that radial lines are being rapidly extended throughout the Province, the possibility of such co-operative action is becoming greater. The attention of the local inspectors is directed to this matter. Such co-operative action would not only result in the introduction of manual training and household science, but would also promote a better feeling among the different municipalities and lead to combined action in other fields of civic betterment. I am pleased to note that a few such groups are considering the possibility of such an arrangement.

Memorial School, Hamilton

Probably the best provision yet made for manual training and household science in the Public Schools, is that to be found in the new Memorial School in Hamilton. This consists of a separate building on the school grounds. The manual training accommodation consists of entrance hall, teachers' office, wash room and lavatory, cloak room, manual training room, store room and locker room. The manual training room is of ample proportions and is well decorated with drawings, specimens, models, etc.

The household science accommodation consists of lavatory and wash room, cloak room, main kitchen, laundry, small kitchen, pantry, dining room and bed room. The equipment provided is one of the best we have in the Province and no pains have been spared to provide everything necessary.

The main or outstanding feature of the work here is the fact that the girls do practically all the work in connection with their "flat" or "home." It is their proud boast that the caretaker does nothing inside the door except remove the garbage. The teacher has so organized her work that all the ordinary household activities are taught. The teacher thus describes her methods of handling the work:

"The whole class remains for the theory part of the cooking lesson. Then the housekeeping and laundry for the day is discussed, and the group to undertake this is dismissed from cookery, coming back for the serving. While the cookery class get out utensils and distribute supplies, the teacher visits the other groups, assigning definite duties and demonstrating methods of working. Quality of work, rather than quantity, is demanded of these groups. The laundry group look after the towels of the previous class, from Junior classes, from the manual training room and teachers' rooms, their own uniforms and the teacher's uniform, which introduces starched work.

"The housekeeping group is taught bed-making, table setting, or some simple home nursing problem in rotation until all in the class have been taught. We try to arrange our work so that a longer and shorter lesson are put on together. We find that the girls are so interested and feel the responsibility of their school home to such an extent that discipline maintains itself, which makes the teacher's supervision much easier. The pupils do the entire housekeeping of the flat. They are given full charge of the getting out and putting away of supplies, the oven or steamer, the simpler cleaning, the towel supply, the simpler nursing for cuts, burns, etc., a great deal of the blackboard work, most of the shopping and looking after and reporting on supplies. They even share the keeping of discipline. One girl of each group of four is responsible for her group or 'family' as we prefer to call it." Sewing is also taught by the same teacher.

The methods being adopted by Miss Dowd in this school are worthy of imitation and the success being achieved seems to prove that with proper organization it is possible for one teacher to deal with all the activities of the ordinary household.

Rural Schools

Great progress has been made in the introduction of manual training and household science into the Rural Schools. In the year 1919-20 these subjects were taught in 190 schools, in 1920-21, 308 schools, and owing to the teachers being trained in summer schools and Saturday classes at two of the Normal Schools, the prospects are that for the current school year these numbers will be very largely increased.

The best method of approach to household science in the Rural School is through the medium of the hot noon-day lunch or the preparation of one or two hot dishes to supplement the lunch brought from home. Owing to the fact that many pupils live far from the school, it is impossible for them to go home for the mid-day meal, and they are thus dependent upon lunches which they bring with them. Very frequently the pupils are allowed to eat their lunches where and how they please, and the method chosen is conducive neither to comfort nor to health. In fine weather they do not wish to lose any time from their games, and so they eat their food while playing, or they bolt it in order that they may get to their play more quickly. In severe weather they crowd around the steps or the stove and do not hesitate to scatter crumbs and crusts. In one case even a teacher has been seen holding a sandwich in one hand and writing on the blackboard with the other.

In many cases the lunch does not attract the pupil. It is often carried without proper wrapping, in a tin pail, and it then absorbs the taste of the tin; again it is often wrapped in newspaper and is flavoured with the printers' ink; occasionally, it is wrapped in cloth not too clean. Conditions such as these are not fair to the pupils. They come a long way to school, often over poor roads; and it is necessary, for both their physical and their mental development, that they should receive adequate nourishment served as attractively as possible. Many of the defects found among school children can be traced, to a greater or less extent, to lack of nutrition. The United States military draft shows that the number of those physically defective is from seven to twenty per cent, higher in rural districts than in towns and cities, and this difference is not peculiar to that country. May we not reasonably suppose that many of these defects are caused by mal-nutrition, and that this mal-nutrition is in part due to the poor noon-day lunch? As these defects hinder mental as well as physical development, the question of proper nutrition through the medium of the school lunch becomes an educational one.

Interest in this subject is rapidly growing in the Province and scarcely a mail is received that does not contain many requests for advice, information and requests to address public meetings in rural districts on this subject. The Women's Institutes have played a great part in arousing the people to a more adequate conception of the importance of this subject and in many instances have materially assisted in obtaining the necessary equipment. In order to stimulate popular interest in this subject the Department has had prepared a moving picture film which shows the practical working out of the scheme. This picture was not "faked" but was taken in our own rural schools mainly in Wentworth County. It is available in Pathescope and Standard sizes and will be used for lecture purposes and may be loaned to any approved organization able to make use of it for educational purposes. The unanimous experience of those teachers who established the hot dish is that the health of the children, the character of their work in the afternoon and their attendance is materially improved. One great advantage is that the pupils are under proper supervision during the noon hour and moral and physical injury is prevented.

Owing to the rapid increase in the number of rural schools introducing manual training and household science, the Legislative appropriation was found insufficient to pay the grants in full and unfortunately a reduction had to be

made. It is confidently hoped, however, that in view of the far-reaching effect of the work that the next appropriation will render such a course unnecessary.

Summer Schools

During the year three summer schools in manual training were held and one in household science. One of these courses was given at the Technical School for the purpose of offering an opportunity to teachers holding the Elementary certificate to obtain the ordinary certificate. At the same time a change in the Regulations was made by which after the year 1925 the Elementary certificate will be valid in Rural Schools only. The second course was given at the College of Education for the purpose of qualifying for the Elementary certificate, a completion of which requires two summers. The third course was one given in Farm Mechanics at the Ontario Agricultural College and qualifies for teaching that subject in the Agricultural Departments of the High Schools.

The household science course was given at the Technical School, Toronto, and was attended by approximately one hundred teachers all from Rural Schools. The work taken here dealt entirely with the possibilities of the Rural School, with reference to household science and the serving of at least one hot dish at the noon-day lunch. These students did remarkably good work during the course and many of them left with the expressed intention of taking up the work in their schools in September.

Saturday Classes

The summer schools above referred to are held for five weeks during July and August when the schools are closed. An experiment is now being tried out at two of the Normal Schools, Hamilton and London, in holding classes on Saturdays. For several years past voluntary classes have been held in Hamilton on Saturdays. Rural teachers in service in Wentworth County have been visiting the Normal School on Saturday for the solution of the difficulties they have met with during their school practice. Out of this movement inspired by Inspector Robinson and ably supported by the authorities of the Normal School, the present classes have grown. The numbers in attendance require the services of two household science teachers and one manual training teacher.

Miss Elliott of the Hamilton Normal School explained the scheme to the teachers of East Middlesex assembled in their annual Institute and a number of the teachers asked for similar classes. At the request of Inspector Thompson these classes were established at London Normal School.

The following circular explains the purpose of these classes and outlines the Regulations under which the classes are carried on:

Saturday Classes— In Manual Training and Household Science at Hamilton Normal School—1921-22

1. In order to assist teachers at present in service in rural schools the Minister has decided to open Saturday Classes in Manual Training and Household Science.

2. The classes will commence on Saturday, October 1st, 1921, and will continue until Saturday, June 10th, 1922.

3. Any teacher actually employed in a rural inspectorate is eligible to attend.

4. The Course provided will parallel the Summer Course given in Toronto and will be given the same credit for the Elementary certificate.

5. An examination will be held at the end of the Course, and successful students will be required to attend the second year of the Summer Course held in Toronto, 1922, in order to complete the elementary certificate in Manual Training or Household Science, unless excused by the Minister.

6. Regular attendance will be expected and absence must be satisfactorily accounted for to the Principal of Hamilton Normal School.

7. An allowance of \$1.25 will be paid to each student for each day's attendance to assist in paying travelling and other expenses.

8. The organization meeting will be held at 10 a.m. on Saturday, Oct. 1st, and the students will then decide the time of the classes so as to secure five hours instruction each day.

9. Applications endorsed by the Public School Inspector concerned should be sent to Mr. F. F. MacPherson, Principal of Hamilton Normal School.

Training of Teachers

The measures where outlined, if continued, will take care of the requirements of the Rural Schools in regard to teachers of household science and manual training, but we require teachers who specialize in these subjects and spend their whole time at the work. In the case of household science this is now provided for at the College of Education where we have a small but efficient Department which gives one full year of training in household science to students who already hold a Second Class Professional certificate. If and when new buildings are erected at the College of Education, more extensive provision should be made for the accommodation of candidates for the certificate qualifying teachers for household science instruction in the Urban Schools.

In the case of manual training we have at present no provision for training teachers and now that all returned soldiers who were trained two years ago have been absorbed by the schools the question is urgent. Training classes were formerly held at the Ontario Agricultural College but owing to the extension of College activities, provision could no longer be made there and we are now without any facilities for training the necessary teachers. The logical place for training such teachers seems to be the College of Education but until additional accommodation is provided the matter can hardly be considered in this connection.

In case it is found impossible to establish efficient training classes for this purpose some such scheme as that adopted by the City and Guilds Institute of London might be adopted.

The whole question of providing an adequate supply of teachers for this subject should receive early attention.

Manual Training and Household Science Centres

No useful purpose would be served by giving the names of the 308 Rural Schools that are now teaching manual training or household science or both, but any School Board that is considering the introduction of these subjects will be gladly furnished with the names of the nearest schools where the subject may be seen in operation.

The following is a list of the fully equipped manual training and household science centres:—

APPENDIX F

REPORT OF THE INSPECTOR OF ELEMENTARY
AGRICULTURAL CLASSES

To The Honourable R. H. Grant, M. P. P.,
Minister of Education for Ontario.

Sir,—

I beg to submit for your consideration a report on the Agricultural Classes in connection with the schools of the Province for the year 1921.

I have the honour to be, Sir,
Your obedient servant,

J. B. Dandeno,
Inspector of Elementary Agricultural Classes.

Toronto, January, 1922.

The introduction of classes in Agriculture into the rural schools has already produced tangible results in a direction not at first expected. Through the use of the school garden as a part of the work of the school the interest of both pupils and parents has been awakened towards the improvement of school grounds and building, and this aspect of education is having a particularly far-reaching effect, and is no less important than the scholastic type.

The aim should be to have a well appointed garden as part of the accommodation of every school and to have systematic instruction carried on not only in connection with this garden but also in connection with the work of the homes through the home projects.

Such a scheme of education should make for a more permanent and a happier rural population.

The number of Public and Separate Schools qualifying for grants each year commencing in 1903 is given in the following table:—

Year	No. of Schools	Year	No. of Schools	With School Gardens	With Home Gardens
1903	4	1912	101
1904	7	1913	159
1905	6	1914	264	208	56
1906	8	1915	407	222	185
1907	2	1916	585	324	261
1908	14	1917	989	466	523
1909	16	1918	1,020	588	432
1910	17	1919	1,408	618	790
1911	33	1920	1,648	702	946
		1921	1,804	690	1,114

Until 1914, no distinctions were made in the reports respecting Home Gardens and School Gardens.

Amounts paid out to Boards, Teachers and Inspectors in the form of agricultural grants covering the school years ending June 30th, 1920, and June 30th, 1921:

	1920	1921
Public School Inspectors	\$10,655 00	\$10,753 00
Separate " "	704 00	845 00

1917	1920
1918	1921

The following taken from a report by Inspector Campbell of West York shows the chief points of interest in the struggle for better results in the teaching of elementary agriculture in rural and suburban schools. The report here given speaks for itself.

Weston, Aug. 9th, 1921 .

Instead of filling out the regular forms of Inspector's visits and inspection of the work in Agriculture for each school, I am submitting a somewhat general report. On account of the heaviness of my work I had not time to make my usual June visit to inspect the school gardens and give special attention to the work in Agriculture. What I give in this report is gathered from notes made at my regular visit and from brief statements made to me by the teachers at the close of the term.

Etobicoke Township. .

Nos. 7, 10 and 12 have done the best work. The best school garden is that of No. 10, Thistle town. No. 12, Long Branch, has no school garden but gives good attention to school grounds and holds a very successful and instructive fall fair well supported by the ratepayers. The schools at Lambton Mills, No. 3, and Sunnylea, No. 14, are not doing the work as well since there is no grant for a teacher without an Agricultural certificate in a graded school.

In this township, the teachers who have been at Guelph, Miss Eva Nattress and Miss Helen Williams, are doing good work. They know how and have the spirit for it. Five out of fourteen schools in Etobicoke I consider are doing work worth while.

Vaughan Township.

In this township there are 16 one-roomed schools and two of two-rooms. Nos. 2, 5, 12 and 17 have school gardens and the work is good. The teachers in charge have certificates in Agriculture. Other schools in Vaughan doing satisfactory work are, Nos. 3, 8, 9, 18 and 19, although some have not qualified for the grant. There are nine therefore out of the eighteen schools in line.

York Township.

Swansea is the outstanding school in this part of the Township. The work continues very good with liberal supplies and equipment. No. 19 York, Emery, has not done as well this year, school garden poor. No. 31, York, gives fair instruction.

Town of New Toronto.

Under Miss Jean Austin the work here is most satisfactory.

SUMMARY

Total number of rural schools	40
Number teaching agriculture	17
Number qualifying for grant.....	10
Schools where work has lapsed or fallen down badly	2
Total number of urban schools.....	4
Number teaching agriculture	1

The cause of lapse or falling down in the work is the incoming of a teacher who has not the certificate or one who does not care for the work and reports to me that the Trustees did not think it worth while to continue.

Amount spent by Trustees for Agriculture, outside of schools like Swansea or New Toronto, rather small, five to ten dollars each.

During this fall I expect to have a little more time to give to Agriculture at my visits and by correspondence with the teachers. I promise you from 60 to 75 per cent. of my schools in line.

Yours faithfully,

A. L. CAMPBELL.

Read the following statements from trustees.

S. S. No. 19, Charlottenburgh, Glengarry Co., Lena D. Murray.

This year, in Agriculture, was quite a successful one. The work in-doors was covered quite fully. The results from the flower bed show that the work was done carefully. It not only taught the pupils how to do the work, but they were so interested they had beds of their own at home.

H. MACDERMID, *Trustee,*
Martintown.

S. S. No. 12, Charlottenburgh, Glengarry Co., Jennie F. Robertson.

We think the pupils take a great interest in their school garden and take more interest in agriculture generally as a result of their school work. The greatest drawback is the condition of the garden during vacation. If some means could be provided for caring for the garden during this time it would be much more satisfactory. Also quite a lot of trouble is caused by vandalism from outsiders stealing and destroying garden stuff.

S. W. CHRISTIE,
M. D. McMARTIN,
Trustees,
Martintown.

S. S. No. 16, Manvers, Durham Co., Miriam L. Richardson.

The teacher has put money to good use in beautifying the school grounds.

F. BARNSTAPLE, *Sec. Treas.,*
Janetville.

S. S. No. 19, Darlington, Durham Co., Alice G. Werry.

The garden, which is part of school grounds, is being cultivated in good manner by the pupils. The plots are doing well and the experiments with different fertilizers will be of value. I am of the opinion that if a prize was offered for care of plots during vacation for the best plot, freest of weeds, etc., the morning of September 1st, say at 9 a.m., the pupils would tend to garden during holidays. At any rate the pupils appear to be interested in their garden work this year, and credit must be given to teacher for the work she has taken to make it interesting.

J. J. SMITH, *Sec. Treas.*
Enniskillen.

S. S. No. 21, Clarke, Durham Co., Hazel I. Clark.

We have an excellent garden, well cared for, and we shall continue the good work.

JOHN STEWART, *Sec. Treas.*,
Kendal.

S. S. No. 9, Ashfield, Huron Co., Marguerite Sturgeon.

This was our first year taking up Agriculture in our school and we have made considerable progress with it. Our teacher is very anxious to give the subject ample justice and as we are keeping the same teacher on for the coming year, we hope to make still better progress next year.

J. F. JOHNSTON, *Sec. Treas.*,
Sturgeon, Ont.

S. S. No. 4, Goderich, Huron Co., Anna Elliott.

This school has entered the school fair work for this year. The pupils intend having an auction sale of vegetables from the school garden this fall. The money will be used for Agricultural purposes. The school has had a garden these last five years. Agriculture has been taught as a subject in school for two years.

ISAAC JONES, *Sec. Treas.*,
Clinton, R.R. No. 2.

S. S. No. 14, Hay Huron, Co., M. M. Jarrott.

The Inspector's recommendation that the teacher take a course at Guelph this summer was considered at our meeting and decided thus: Most of the children of our school have enough and some more than enough work in garden and field at home to get the practical part which the school garden might furnish, therefore, we would not advise the gardening and the teacher to take a course at Guelph.

W. C. PEARCE, *Sec.*,
Hensall, Ont.

S. S. No. 4, South Stanley, Huron Co., Marguerite Douglas.

The scholars take a keen interest in the study of Agriculture and in such experiments as were carried on by the teachers, such as testing the germination of seeds, etc.

Our chief difficulty is in overcoming the prejudices of the parents. "What's the use! We can teach them all about Agriculture at home!" We are earnestly endeavoring to get the pupils to see the wonderful things that are constantly taking place about us. The scientific side is the one which captivates their young minds.

WM. CARNIE, *Sec. Treas.*,
Bayfield, Ont.

S. S. No. 5, Delaware, Middlesex Co., Annie S. Rowland.

We consider that the teaching of Agriculture at a Public School is essential. Gardens at school and at the homes of the children are a great benefit which has been proven at our school.

G. S. IRELAND,
ALTON STEVENS,
Trustees.

S. S. No. 14, London, Middlesex Co., E. L. Birrell.

Garden was ploughed in fall of 1920 by one of the trustees. In the spring fertilizer was put on. Plot was also cultivated. Previous years we have had home plots but the pupils were not very enthusiastic over the work, and they were very unsuccessful. Now, since we have had a school plot for each pupil nearly every one has also a little plot at home. A few of the pupils have also planted their parents' gardens.

W. G. TAYLOR, *Sec. Treas.*,
Ettrick, Ont.

S. S. No. 10, Goderich, Huron Co., Margaret Lansing.

The children take great interest in their home gardens and grain plots, and also great pride in the window boxes at the school as shown by the care in watering and looking after them.

JOHN R. MIDDLETON, *Sec. Treas.*,
Clinton, Ont.

S. S. No. 4, Stanley, Huron Co., E. Kathleen Elliott.

We find that the children respond in a most gratifying manner to the efforts to teach the science of Agriculture, while the home gardens show diligence and interest.

In the past years, with a view to broadening the vision and quickening the powers of observation of the pupils so that they would realize and enjoy the beauty which surrounds them, we have been encouraging the study of Nature—particularly birds, plants and insects.

WM. CARNIE, *Sec. Treas.*,
Bayfield, Ont.

School Fair organizations continue to do exceedingly important work in the rural schools. These organizations are under the charge of the Agricultural Representative, in co-operation with inspectors and teachers. Perth is now the only county without a representative.

For the information of teachers and inspectors the following list, correct to January 1st, 1922, is given below:

Agricultural Representatives of the Ontario Department of Agriculture

<i>County</i>	<i>Name</i>	<i>Address</i>
Algoma	J. M. McIntosh	Sault Ste. Marie
Brant	R. Schuyler	Paris.
Bruce	Campbell Lamont	Walkerton.
Carleton	D. J. Matheson	Carp.
Dufferin	H. A. Dorrance	Orangeville.
Dundas	W. C. Caldwell	Morrisburg.
Durham	F. C. Paterson	Port Hope.
Elgin	C. W. Buchanan	Dutton.
Essex	Justus Miller	Essex.

	Wright, Robert, Hanover.

HIGH SCHOOLS

In some respects the High School is the most important of all our educational institutions. In this School the teachers are "grown", and the teacher is the most important factor in the Public School. Moreover, the High School is the most important factor in shaping the students' course for the future.

During the past year provision was made for a four-year course in agriculture in the High Schools which any student may elect and receive credit either for entrance to the University, the Normal School or the Ontario Agricultural College. The result of this change in examination requirements cannot of course be seen as yet. The chief difficulty in carrying out the intent of this change is the lack of qualified teachers.

As the High Schools provide for this change in curriculum, the number of Public School teachers able to teach Agriculture in the rural schools will be increased materially from year to year, resulting in an improved rural school.

The extent of the work in High Schools is indicated in the following table. The word "yes" means that classes in Agriculture were successfully maintained throughout that term and the word "no" means that the work was temporarily dropped.

Courses are provided at the Ontario Agricultural College covering two consecutive summers of five weeks each. These courses were introduced in 1913, and the number of teachers who have so far qualified each year for an Intermediate Certificate in Agriculture are given below:

1914, 12; 1915, 10; 1916, 15; 1917, 15; 1918, 9; 1919, 21; 1920, 25; 1921, 24.

Below are the names of those teachers who qualified in 1921:

Bodkin, G. L., B.A., Western.	McLaurin, P. C., B.A., McMaster.
Evans, Josiah J., B.A., Queen's.	Mitchell, W. J.
Foster W. E.	Morris, Clive M., M.A., Queen's.
Gowdy, Douglas.	O'Donohue, J. A.
Hamilton, R. S., M.A., Toronto.	Pigott, Margaret.
Howard, Frances.	Rogers, Wm. C., M.A., Queen's.
Ireland, Norval J., B.A., Toronto.	Scott, Rena C.
Joyce, W., B.A., Queen's.	Simpson, J. M., B.A., Queen's.
Learoyd, C. W., B.A., Toronto.	Smith, D.G.
Mathieson, Elsie.	Stilwell, Bertha E.
McGill, G. W., M.A., Queen's.	Strathdee, Mary.
McLaurin, J. L., B.A., McMaster.	Tucker, Mary Clara, M.A., Toronto.

FARM-MECHANICS.

Year.	Number.	Year.	Number.
1917	10	1919	10
1918	9	1920	8
		1921	7

The list of those who took the course in Farm Mechanics in 1921 is given below:

Carroll, W. J., B.A., Queen's.	Oliver, W. L.
Erwin, W. M., B.A., Queen's.	Porter, W. A.
Morrison, W. J., B.A., Toronto.	Smith, D. G.
	Wheeler, H. A.

The following took Part III of the course leading to Specialists' certificates in Agriculture. An acceptable Thesis has yet to be submitted in order to complete the course:

Attwood, A. E., M.A., Queen's.	McGill, D.H., M.A., Queen's
Bunton, G. W., M.A., Queen's.	Miller, G. A., M.A., Queen's
Erwin, W. M., B.A., Queen's.	Morrison, W. J., B.A., Toronto.
Gundry, A.P., B.A., Toronto.	Wyndham W. B., B.A., Toronto.

Specialist's Certificate in Agriculture

The following, whose names are given below, have completed the course prescribed for Specialist standing in Agriculture and have submitted acceptable Theses:—

J. G. Adams, B.A., Queen's.	W. M. Erwin, B.A., Queen's.
J. A. Anderson, B.A., Queen's.	A. R. McRitchie, B.A., Toronto.
G. E. Copeland, M.A., Queen's.	F. P. Smith, M.A., Queen's.
N. Davies, M.A., McMaster.	G. S. Johnson, B.A., McMaster.

University standing, Summary Including Farm Mechanics and Specialists With Degrees,—

Without Degrees	76

THE NORMAL SCHOOLS

The regulations respecting the teaching of Agriculture in High Schools have recently been amended so as to make it possible for a student to secure an Elementary certificate in Agriculture without attendance at the summer courses. On the completion of a four years' course in Agriculture in a High School, followed by the usual course in a Normal School, a student will receive an Interim Elementary certificate in Agriculture.

The accommodation for teaching Agriculture in the Normal Schools is necessarily limited, but these schools, provided as they are with well-trained teachers, are meeting the needs of those expecting to teach Agriculture in rural schools.

The Normal Schools need better class-room accommodation so that more individual work may be done by the students. Plant houses are also needed.

Teachers of Agriculture in the Different Normal Schools

Hamilton	G. O. McMillan, M.A., B.Pæd., Queen's.
London	G. W. Hofferd, B.A., Queen's.
North Bay	H. E. Ricker, M.A., Queen's.
Ottawa	G. A. Miller, M.A., Queen's.
Peterborough	A. J. Madill, B.A., McMaster.
Stratford	J. W. Emery, B.A., D.Pæd., Toronto.
Toronto	David Whyte, B.A., Toronto.

All these men hold Intermediate Certificates in Agriculture.

The schools affiliated with the Normal Schools are given in the following list. These schools have all made a good start and it is hoped that efforts for advancement of such schools may be fostered and encouraged in every possible way. It is also hoped that some of these schools may, in the near future, become centres of consolidation.

Schools Affiliated				Teacher of Affiliated School

SUMMER COURSES

The attendance upon the summer courses in Agriculture for teachers continues to increase from year to year. In fact, the accommodation, especially at the O. A. C., is scarcely adequate to meet the needs of the ever increasing numbers. The Ontario Ladies' College at Whitby ever since 1919 has met the needs of the overflow from the O. A. C., and both centres now have reached the limits of their accommodation. Moreover another centre at the Northern Academy, Monteith, is taking care of those teachers who live in Northern Ontario. Another additional centre may be established at the Agricultural School, Kemptville, in 1922.

As Mills Hall, the new dormitory for men at the O. A. C., was ready for occupation by the teachers attending the summer courses in 1921, there was ample accommodation for all. In many respects, the session of 1921 was the best on record, partly due to the fact that all of those in attendance were able to secure board and living accommodation on the campus.

The record of attendance for the different summer sessions since 1911, is given below in order that the increased attendance may be noted.

Whether the amendments to the High School course of study, making it possible for a student to take the work in Agriculture during the High School course instead of during the summer sessions, will reduce the numbers entering the summer sessions, remains to be seen.

Reports from Whitby and Monteith by the respective Principals of these two Summer Schools are given at the end of this report.

Attendance at the Ontario Agricultural College Summer Courses in Agriculture

Year	Elementary				Intermediate					Inspectors		Farm Me- chanics	Total
	I		II		I		II		III	I	II	—	
	Men	Women	Men	Women	Men	Women	Men	Women	Men	—	—	Total	
1911.....	8	75	1	16	100
1912.....	16	65	2	23	106
1913.....	14	64	5	36	23	4	146
1914.....	8	55	5	27	13	4	14	126
1915.....	15	39	5	18	17	1	9	1	105
1916.....	11	99	9	31	15	3	14	1	183
1917.....	15	138	7	81	9	1	13	2	10	276
1918.....	6	187	7	119	20	11	9	9	79	9	456
1919.....	16	155	6	160	9	19	7	21	86	10	489
1920.....	28	125	10	135	7	25	19	8	10	374
1921.....	62	167	36	86	24	15	16	8	7	7	428

A glance at the above table will show that, since 1915, a marked progress has been made with respect to the attendance, even after the number of those taking the Inspectors' Course has been subtracted.

A considerable number of those who enter Part I of the Course leading to an Elementary certificate, for some reason or other do not complete the course by taking Part II. The following figures show the percentage of shrinkage and concerns the classes at Guelph only:—

Year	Number taking Part I Elementary	Year	Number completing Part II Elementary the following year	Decrease per cent.
1911	83	1912	24	71
1912	81	1913	41	50
1913	76	1914	32	58
1914	63	1915	23	63

The Summer School In Agriculture, Whitby

(By Norman Davis)

At the third Summer School in Agriculture held at the Ontario Ladies' College, Whitby, there were one hundred and thirty-one students in attendance. About ninety applied for admission to Part I, but only eighty-one reported at the opening. In Part II there were fifty enrolled, about twenty less than in the first year class of 1920. The total attendance was sixteen more than last year.

The session was formally opened on Tuesday evening, July 5th., when Rev. Mr. Farewell, Principal of the Ladies' College, Dr. McGillivray, Secretary of the High School Board, and Colonel Farewell of Whitby, welcomed the students to the College and the town of Whitby. Each member of the staff also spoke and briefly outlined the work in his department.

The members of the staff and subjects taught were as follows:—

Norman Davies, B.A., of Renfrew Collegiate Institute, Principal, taught Poultry, Gardening, Part II Physics, and had charge of Sports and Games.

J. A. Short, of Swansea Public School, taught Dairying, Horticulture, Floriculture and Beekeeping.

J. G. Adams, B. A., of Beamsville High School, taught Chemistry, Soil-Weather and assisted in Gardening.

G. W. Hofferd, M.A., B. Paed. of London Normal School, taught Entomology and Bacteriology.

J. A. Anderson, B. A., of Brockville Collegiate Institute, taught Botany in its various branches.

R. M. Tipper, B. S. A., of Uxbridge, taught Field Husbandry and Animal Husbandry.

Miss Wallace and Miss Holland of the Ladies' College, had supervision of the dormitories and dining room.

All students, excepting four, and all members of the staff were in residence. The accommodation was ample in every respect. However, an attendance of more than one hundred and thirty-five would result in some crowding and discomfort in the rooms. Most of the classes were held at the High School, a ten minutes' walk from the College. Each year was divided into two sections. With forty in each first year division the groups were a little large for practical work in certain subjects. The second year divisions of twenty-five each were ideal for all classes. A larger attendance, especially in first year, would necessitate additions to the staff and changes in organization.

In all branches of the Course, stress was laid on practical work. The gardens were prepared and planted during the first week. Tomato plants were tied up during the fourth week. The gardens were cared for at times outside of regular classes. In Entomology practical work on life histories of insects was carried out in laboratory and experiments in value of various sprays conducted in the potato field at the College. In Horticulture and Floriculture, seeds and cuttings were planted and cared for. In Botany there were field excursions for collecting weeds, and observing and studying fungus diseases of grains and vegetables. In Part II Physics, the level was used for taking readings, from which a plan of drainage was drawn. In Animal Husbandry, various classes of stock were brought to the College and the lectures given in a tent erected for this work. This class also visited the barns of the Ontario Hospital Farm and observed the various up-to-date methods of stabling, feeding and caring for live-stock. In Dairying, the students made the Babcock test for butter and cream: made butter in small laboratory churns and used the cream separator. The Beekeeping classes visited a nearby apiary and learned of the ways of bees at first hand. In Poultry, considerable attention was given to candling of eggs and one incubator was run throughout a hatch. In every subject practical demonstration was given to a greater degree than would seem possible at other than an Agricultural College.

On several occasions, visitors addressed the students. On the evening of July 15th, President Reynolds of the Ontario Agricultural College gave an interesting address on "National Dependence on Agriculture."

On Tuesday, July 19th, Dr. J. B. Daudeno, Inspector of Elementary Agricultural Classes, paid us an official visit; inspected the work and addressed the students.

On Tuesday, July 26th, Miss Dixon of Toronto gave a demonstration of various uses of the gramophone in schools.

On Wednesday, July 27th, we were honoured by a visit from The Honourable Mr. Grant, Minister of Education and the Legislative Committee on Education, Mr. Marshall, Mr. Cook, Mr. Swayze and Mr. Stringer. The morning was spent in visiting various class-rooms and inspecting the work being carried on. After luncheon the visitors addressed the students and expressed their satisfaction with the spirit in which all were carrying on their work. This visit was much appreciated by the staff and students.

Professor F. C. Elford, Dominion Poultry Husbandman, Ottawa, visited the school on July 28th, and gave two very instructive addresses on Poultry topics.

While the daily programme was strenuous, there were periods of relaxation and good times. Baseball and Tennis were the chief games and schedules were drawn up and played out. Classes were formed for all who wished instruction in swimming and diving and more than eight were enrolled. From eight to ten o'clock each evening the swimming tank was a very busy place and about twenty-five learned to swim. The two Field Days were very successful. The first afternoon, July 15th, was devoted to group games and every student and member of the staff took part. The second afternoon, July 29th, was for individual contests. Practically all students took part in every event and the competition for first place between the years was very close.

On Saturday, July 23rd, one hundred students and members of the staff went on an excursion to Niagara Falls. This was an ideal outing from Whitby and was thoroughly enjoyed by all. Through the kindness of the Superintendent and other officials of the Ontario Hospital for the Insane, and Chairman of the High School Board, the students were shown through the buildings of the Hospital and afterwards entertained to tea on the lawn. It was a very enjoyable and instructive afternoon for all.

The final social event of the Course was a concert given by the students in the Assembly Hall on the evening of Friday, July 29th. This was, without doubt, the best concert given in connection with the Whitby Summer School and showed a wealth of originality and talent among those in attendance.

The last week was a busy one for all and the Course closed at noon on Friday, August 5th.

Summer Course In Agriculture, Monteith

(By G. S. Johnson)

The Summer Course in Agriculture was held at the Northern Academy at Monteith. As in the past a large number signified their intention of attending but only a small proportion of these actually came. There were eight that had been in attendance during the Course of 1920 returned to take Part Two, and seventeen new pupils reported for Part One. A number of these were from Old Ontario and were sent to Monteith at their own request.

The Staff and the subjects taught were as follows :

Mr. Geo. S. Johnson, B.A., Principal of Northern Academy was Principal and taught Botany of the First Year.

Mr. H. E. Ricker, Science Master of the Normal School at North Bay, was Vice-Principal and taught Chemistry, Physics, Bacteriology, Weather, and Methods.

Mr. R. F. Downey, Principal of Peterborough Public School, taught School Gardening, Soils, Horticulture of Part One, Physics and Horticulture of Part Two.

Miss I. E. Dobbie, Principal of the Continuation School, New Liskeard, taught Dairying, Poultry, Floriculture, and Beekeeping.

Mr. G. E. Copeland, Science Master at Port Hope High School, taught Botany, Entomology and had charge of the Recreation and Games.

Mr. Chas. M. Laidlaw, Superintendent of the Demonstration Farm, Monteith, taught Field and Animal Husbandry.

The Course was the same as that followed at Guelph and at Whitby, but it was necessarily modified in some respects to suit the peculiar Agricultural situation as found in Northern Ontario.

The Demonstration Farm, which is situated along side of the Northern Academy provided excellent opportunities for the students to observe live stock and Northern Farm operations. Mr. Downey obtained splendid results from the School Garden, practically all of the crops including cabbage, turnips, beans, lettuce, radishes, onions, potatoes and tomatoes matured. It is of special interest to note that potatoes were in blossom about four weeks after they were planted and that mature tubers were obtained from the planting on July the 12th.

A most enjoyable day was spent at Iroquois Falls as guests of the Abitibi Power and Paper Company. No effort was spared to entertain them from the time they arrived early in the morning until they left late at night.

Dr. J. B. Dandeno, Inspector of Elementary Agricultural Classes, visited the School during the Course, and addressed the students upon the importance of the teaching of agriculture in the rural schools.

On Demonstration Day the School was visited by Honourable R. H. Grant, Minister of Education, Honourable Mr. Doherty, Minister of Agriculture, and Mr. George Lee, the Chairman of the T. & N. O. Commission.

APPENDIX G

ANNUAL REPORT OF THE INSPECTOR OF PUBLIC LIBRARIES

TO THE HONOURABLE R. H. GRANT, M.P.P.,
Minister of Education for Ontario.

Sir,—I have the honour to submit the following report of your Public Libraries Branch for the year 1921, and the statistics, etc., of the Public Libraries of the Province for 1920; also a statement of the grants paid in 1921 to Public Libraries, and to Historical, Literary, and Scientific Societies.

Startling progress is being made by the public libraries of the Province as a whole. Librarians report increasing rapidity in the growth of patronage, the libraries have doubled their expenditure for books during the last two years, the smaller libraries are showing a marked improvement, several new libraries were established in 1921, and the interest in travelling libraries has exceeded all expectations.

Summary

1. The addition of fourteen new libraries increases the total number to 450.
2. The use of Travelling Libraries in 1921 was 41 per cent. greater than in 1920.
3. Librarians report an unprecedented increase in the circulation of books for home reading for 1921. Official records for 1920 (our latest) show an increase of 800,000 for 1920 over 1919. Better incomes for 1921, due to the new Act, which made more generous book-buying possible, with the aggressive work of libraries, were probably responsible for the large increase reported informally for 1921. There is no doubt but the total patronage of 1921 was not far from 8,000,000.
4. Expenditure for books has doubled in two years. This gives great satisfaction. Former reports have shown that book purchasing was not keeping pace with library patronage; the increase in purchases from year to year was very small; the need for larger expenditures was explained and persistently urged by the Public Libraries Branch and, with the new Act in force, gratifying success has been won. Association libraries, which gain little by the new Act also show larger purchases to an extent never shown before.
5. The rural, village and small town libraries, which are chiefly of the association type, have advanced more in the last year or two than in any previous several years. Recent library improvement in the smaller places is very encouraging.
6. The grants earned by the libraries in 1921 were 22 per cent. greater than in 1919, due almost altogether to the work of the small libraries. The larger libraries had been earning the maximum for several years. A larger appropriation will be required for 1922. The amount voted for grants has varied very little in several years.
7. The results of the new Act have been satisfactory for the first year. All increased expenditures as far as we have record have been wisely made. The large increases in book purchasing, which were so desirable, indicate the chief benefit

gained from the new rate clause. Several of the larger libraries have improved their service and given well-deserved increases in salary to librarians and assistants.

8. A successful library training school was held.

9. Better office accommodation and library equipment were provided for the Public Libraries Branch.

10. An important event of the year was Canadian book-week in which authors, publishers and book-sellers carried on an aggressive campaign of publicity. Public libraries have always endeavoured to promote an interest in Canadian books and entered into the spirit, giving all the co-operation possible. Many of our libraries use the story hour for children as a means of instilling the ideas of good Canadian citizenship.

Increase in Library Patronage

The chief aim of the modern public library is to reach all the people possible with the right books.

The value of libraries lies in the service that they render; in the quantity as well as the quality. It is a matter for congratulation that the patronage of the libraries is growing at such a rapid rate. An increase of one-third in two years is a sure indication that our libraries as a whole are succeeding in their chief aim. One is surely impressed with the fact that there is a very large demand for books throughout the Province. Public demand has always followed provision to serve a large patronage. To what limits the unexpressed demand really extends one can scarcely estimate. The people of Ontario are reading double the number of books from public libraries that they read eight years ago. The increase is due very largely to increased expenditure for books and by well directed effort on the part of the librarians and trustees. While the average patronage has reached what we might term a reasonable standard, there is a marked difference between the smallest per capita circulation of books and the largest. There is still room for many of our libraries to reinforce their efforts in order to meet the maximum demand—whatever that may be.

The critic naturally asks the question: What about the quality of the reading? We can safely say that we have good reason to believe that the quality is improving as rapidly as the quantity. Departmental records show an improvement in the quality of the book selection in the average-sized and smaller libraries and, secondly, the standard of librarianship is being improved from year to year. Ontario has added more than 200 trained persons to its library forces during the last six years through the agency of the Department Training School for Librarianship.

Increase in Book-Purchasing

There is a real relationship between library patronage and annual purchase of books. Your Public Libraries Branch through its official publication the "Ontario Library Review" has urged persistently that the matter of annual expenditure for books receive serious consideration.

The great majority of the libraries seemed anxious to extend their usefulness but their book purchasing on the average was below the standard necessary to meet the patronage that was already obtaining. Two or three years ago the total expenditure for books was not more than the modest sum of \$68,000. In the year 1920 the total expenditure was \$140,000; in other words the increase in two years was greater than all the increases for the previous quarter century. We

have good reason to believe that 1921 will show a larger increase than has yet been shown in one year. The new Act can be largely credited with the increased book expenditure; but libraries must be credited with taking hold and spending to their limit shortly before they could reap the benefits of the new Act. Increased book expenditure means more to library success than is generally supposed.

Number of Libraries in the Province

Ontario has stood first for several years in having the largest number of libraries in proportion to its population of any country, state or province in the world. With its 450 libraries Ontario has the lead by a more comfortable margin than ever. It is highly desirable to increase our number under Part I of the Act rather than under Part II. Establishment under Part II is often the first step toward reorganization under Part I. We could add very rapidly to our total number by carrying on an aggressive campaign for new libraries under Part II, but equally aggressive work should be carried on to increase the list of those working under Part I. We are proud of our long list of libraries, but we should not forget that there are probably 800,000 people in the Province who are still without library facilities.

Interest in Travelling Libraries

It sounds big to say that there has been an increase of 41 per cent. in the use of our travelling libraries. We are pleased to record such an increase in 1921 as compared with 1920, but the work we are doing is very slight in comparison with what could be done. No department of education anywhere has a larger or more difficult travelling library problem than has the Ontario Department of Education. When we consider that our Province covers 407,000 square miles, that it is as large as France and Germany combined, and that the population is less than three million, we begin to realize what it would mean to serve all the sparsely settled parts of the Province with travelling library privileges. We have a collection of less than 30,000 volumes and not more than 300 travelling library cases. The Branch has been able to fill all applications sent in. The demand increased somewhat on account of publicity given in publications that reach the rural districts. Under present conditions with our enlarged office space we can meet a larger demand, but we would not be justified in carrying on an aggressive campaign throughout the thinly settled parts of the Province since the demand would be so great that we would be unable to meet more than a fraction of it.

The Department or the Branch has never very carefully defined the limits of the service that travelling libraries should attempt to perform. Practical experience has not brought us face to face with any serious difficulties. The only embarrassing requests that are ever received are from communities that are well able to secure library service at their own expense. The Department's best efforts are unlikely to be directed toward giving more than a limited service through the agency of travelling libraries: 1, the travelling libraries should serve those sparsely settled districts where it is not practicable to establish a small local public library under the Public Libraries Act; 2, should serve rural districts where a public library is in progress of organization. Service to all rural Ontario regardless of favorable conditions for the establishment of local libraries would incur a tremendous cost.

The travelling library can never serve the purpose of a local library except for one phase of library service, namely, that of furnishing interesting books that would not necessarily form an essential part of a permanent collection. There is

a certain number of books suited to the use of children; and such books should never be absent from any community. Likewise there are a few score of books that should be continuously within the reach of the people of any district in the Province. Every community should own a sort of standard collection of books. The travelling library—either County or Provincial—seems to be the only solution for circulating the books of the year. A third necessary factor would be a highly organized central library from which special students could secure the best kind of library service.

The travelling libraries are in need of being buttressed on the one side by a small permanent collection of the books-of-all-time, and on the other side by special service for special needs. The Departmental travelling library books are of necessity a popular collection. The books necessarily are suited to the needs of the general reader. Although there are nearly 30,000 volumes in the collection, there is a much smaller number of titles, as hundreds of the most worthy are purchased in large numbers. This is especially the case with Canadian literature and books pertaining to Canada.

Women's Institutes and other rural organizations frequently hear about our service at conventions, and it is quite probable that there will be an increased demand for travelling library service in communities where local libraries should be established. These Institutes and clubs are doing a great deal to make rural life more interesting, and we wish to give credit to many of them for taking the initiative in the establishment of small rural libraries. Although we have met with no serious practical difficulties there is a strong probability that the Department will be compelled to limit travelling library service to the more thinly populated parts of the Province and refuse applications in the better settled parts, on the ground that the travelling library resources cannot meet more demands than those made in the poorer and more sparsely settled sections.

Results of the New Public Libraries Act

The Report of last year contained the comments of leading library authorities and the opinions of the press on the Public Libraries Act of 1920. Last year gave public library boards their first opportunity to gain the benefits from the new Act. All reports and references to practical experience under the Act have been favourable. We were reasonably sure that satisfactory results would follow the passing of the statute. The claimable rate was a reasonable one provided that it was expended in a well-proportioned budget and that the personal service was of the right kind. Your inspector had one lingering doubt in that he feared that a library board here and there would expend the money without giving the right quality of service. A few boards might have been expected to have increased their expenditure without improving the service. As far as we have any knowledge, increased expenditures have been made in the right direction and boards, with perhaps a single exception, have either expended more for books or for superior personal service, or have not taken advantage of the rate clause where the increased expenditure would not have conferred an increased benefit on the public. The very great increase in book expenditure should be credited largely to the working of the new Act and as has already been suggested the large response from the public is a source of very great satisfaction.

The change in the method of apportioning grants from statute to regulation has been well justified, especially in the case of struggling libraries in the smaller places. In deserving cases the Minister has been able to offer special assistance in the form of small amounts.

Numerous favourable comments have been made since the issue of the last annual report. The American Library Association has already placed itself on record as being in favour of the per capita principle. Your Inspector of Public Libraries, in compliance with the request of the A.L.A., explained the principles of the Act at the convention which was held at Swampscott, Massachusetts, in June, 1921.

All indications point to library prosperity under the new Act.

Work with Boys and Girls

Work with boys and girls has received special emphasis in our leading libraries for several years. It has taken hold remarkably well in the smaller libraries of late. The last year has shown a great advance. Your Branch is using every means to encourage this work in the smaller libraries. Appropriate lists are furnished to aid librarians in book-selection. One number of the Ontario Library Review in 1921 was devoted exclusively to articles on work with boys and girls contributed by children's librarians. Our Governor-General in a visit to the Toronto Public Library showed great interest in the department for boys and girls, and complimented the chief librarian on the work that was being done in developing good citizenship. Canadian subjects are receiving special attention in the story-hour in many of our libraries. The following is quoted from a written statement by Mr. Locke, the chief librarian of the Toronto Public Library.

"Our work with boys and girls is deliberately planned and educational in its object. This is the main reason for its success. Our story-hours are carefully prepared and we never lose sight of the great central thought of all our work, the development of intelligent Canadian citizenship. This objective is not on the surface and glaringly apparent as is the case in many of the so-called citizenship or civics courses in schools. If it were, our case would be prejudiced from the start. We believe that the essence of education lies in suggestion and we leave it at that. We provide the environment in which this suggestion may flourish, but we do not direct it.

"Biography, the history of individuals whose lives have been interesting, gives us the starting point for all our stories and wherever possible the relationship to Canadian history and Canadian affairs is always incorporated. Our aim is to be increasingly successful with the same children—continuous, not continual success is what we are achieving. Our girls and boys are growing up with us and we seek not new audiences but gradual additions to our audiences."

Library School

A course similar to that of the previous two years was held in 1921. More satisfactory results were gained, however, by limiting the class to thirty students, and by adopting a more systematic method for the selection of candidates. All applicants, except those holding university degrees or having honour matriculation standing, were required to pass an entrance examination which included questions on history, literature and current events. Selection in this way resulted in all students gaining certificates.

Accommodation was again afforded by the Toronto Public Library Board and the chief librarian, Mr. George H. Locke. For the sixth consecutive year, Mr. Locke and those in charge of the various departments of the Toronto Public Library assisted the Department by lecturing in a number of branches of library science, and also afforded facilities for practice work in the various branches of the system.

The universities, in addition to the Toronto Public Library, gave practising privileges to three students who expected to enter university work. Of the students, three attended from other provinces, and forty-three per cent. were university graduates.

The time has come when we should have a special course for training the librarians of the smaller towns, and the time is not far distant when we shall require a second part to our three months' course in order to give more extended training. Special arrangements should also soon be made for training in addition to that given in the course, especially for children's librarians and cataloguers.

Library Visits

A good number of libraries were visited and in each case affairs were inspected with a thoroughness that has brought about good results. Selection of libraries was limited to those where the time for reorganization seemed favourable, and all the time available was given to that work. It was distinctly of the intensive type, each library dealt with requiring a considerable amount of construction and assistance.

One great difficulty in assisting librarians through personal advice and direction is that there are so many who have not the necessary training to carry out advice when it is given. However, through our various agencies there is a marked general improvement. Two of the library assistants in the Branch visited smaller libraries among the number that were visited and similar visits will be made from time to time.

The institutes supplement the visits and the "Ontario Library Review" is having a good effect. Some visits have been made in the interests of organizing new libraries and we hope the Minister's idea of carrying on further organization work by members of the staff will come to be realized.

Special Associations

Grants have been paid to the Frontier College, the Canadian National Library for the Blind, and the Ontario Library Association. The three institutions are doing good work.

Statistics

I present on pages 268-277 a statement of the statistics of the Public Libraries of the Province, and a statement of the grants paid to Historical, Literary, and Scientific Institutions.

I have the honour to be, Sir,

Your obedient servant,

W. O. CARSON,

Inspector of Public Libraries.

Toronto, February 20th, 1922.

APPENDIX H

REPORT OF THE INSPECTOR OF AUXILIARY
CLASSES

TO THE HONOURABLE R. H. GRANT, M.P.P.,
Minister of Education for Ontario.

SIR:—

I have the honour to submit for your consideration the following report on Auxiliary Classes for the year 1921.

I have the honour to be, Sir,
Your obedient servant,
S. B. SINCLAIR,
Inspector Auxiliary Classes.

TORONTO, FEBRUARY 17, 1922.

During the year 1921 the number of Auxiliary Classes conforming to regulation standard increased from twenty-six to forty-three. Windsor, Guelph, Kitchener, St. Catharines, Brantford and Hamilton Public School Boards, and Windsor Separate School Board, each established one Auxiliary training class. The London Public School Board established two classes and the Toronto Board seven classes. Toronto also established a Myopia class, and appointed a visiting teacher for disabled children, and one for Lip-Reading classes.

There is need for the establishment of other types of Auxiliary classes, but the most urgent need still is the providing of better educational facilities for psychopathic children and high grade defectives, usually called morons, who, in adult life, will have more than 7 and less than 11 years mentality, and who constitute the most serious problem for school and society. Reports from various countries, an extended observation of such classes in the United States, and experience in Ontario during the year, all furnish increasing evidence to confirm the fundamental principles, on which such classes are established, as follows:—

A small percentage of school population is sufficiently subnormal or psychopathic to be unable to profit by ordinary school instruction. The mental age of these children can be determined to within a few months.

Idiots and imbeciles who will never reach a mentality of more than six years, and dangerous psychopathic children are better at home or in an institution.

Other children, who, without such reason as illness or absence from school, are at least two years older than the average age of children of their school grade, and who after an examination are found to be of not less than five years mental age and to require special treatment, are better placed in an Auxiliary training class with a course of study suited to their special needs, and under a specially trained teacher.

It is usually possible in a large Elementary School to select from the Primary classes three pupils, each ten years old, one with a mental age of 5 years and Intelligence Quotient or I. Q. of 50% (5 divided by 10), another with mental age of 7 years (I. Q. 70), and the third with mental age near or quite up to normal but with marked nervous disability.

These subnormal children are neither idiots nor imbeciles (i.e. they will have an adult mental age of more than seven years) but they are unable to keep pace with other pupils whose I. Q.'s range from 75 to 125 or higher. If left in an

ordinary class, their slow educational advance is a source of discouragement and worry to their parents, to the teacher and to themselves, and a hindrance and usually an irritation to other pupils.

If the teacher spends time on the impossible task of bringing them up to class standard, the other pupils are idle. If she goes forward without them, they usually create disturbance or lapse into indifference and many of them in later years become a burden upon and often a menace to society. If placed in a training class they develop into happy and helpful citizens.

When adequate provision is made for such children, in special classes, the resulting advantage to the teacher and to the remaining children of the ordinary class, to the child himself and to society, far outweighs the additional cost involved.

Experience has demonstrated that when the Auxiliary class room is up to the average standard, and other conditions are satisfactory, the parent who understands the situation is always pleased with the transfer.

During the year, in response to requests from School Boards, training class surveys were conducted in the Public Schools of eleven cities, and in the Separate Schools of four cities.

The proper diagnosis of such pupils is both important and difficult. The special examination was confined to psychopathic children, and to those who, at their previous rate of progress, would be three years behind the average in the class when they reached the age of 12 years. The teachers, nurse, physician, parents and the children themselves, rendered sympathetic and valuable service in furnishing information regarding the life history, characteristics and reactions of the child at home and at school. The selected children were given an Intelligence measurement examination which was conducted as privately as possible. A standardized revision of the Binet-Simon tests was used and a record kept of answers of doubtful appraisalment. All psychopathic children were examined by a physician who is also a psychiatrist.

Fifty-five teachers satisfactorily completed the summer course of training for Auxiliary Class work. Practically all of these are now engaged in teaching, and with the increased demand it will be necessary to hold another summer school this year.

If these classes are to function efficiently, provision must be made for class room conditions and sufficient salaries to induce teachers with special aptitude to attend the preparatory course and undertake the work. A circular has been issued containing a detailed statement of the special permanent equipment for Auxiliary Training Classes, which is covered by Government Grant, and a pamphlet is being prepared containing suggestions for teachers.

The need for special education for subnormal and psychopathic children in rural districts, is as great as for city children. The Department is making a study of the best way to meet this requirement.

APPENDIX I

REPORT OF THE PROVINCIAL SCHOOL
ATTENDANCE OFFICER

TO THE HONOURABLE R. H. GRANT, M.P.P.,
Minister of Education for Ontario.

Sir:—

I have the honour to submit herewith my annual report on School Attendance.

I have the honour to be,

Sir,

Your obedient servant,

J. P. COWLES.

Toronto, January, 1922.

Provincial School Attendance Officer.

Number of Attendance Officers

The total number of school attendance officers appointed for the year 1921 was 1,357; 851 in rural, 444 in urban municipalities, and 62 in territory without municipal organization. In two cases the appointments were made by county councils and in twenty-four cases urban boards united in the appointment of officers for duty in both public and separate schools.

General Improvement in Attendance

Reports from attendance officers show an increase in total enrolment and a steady improvement in regularity of attendance, but because of the increase in enrolment the improvement in regularity will not likely be reflected in the percentage of attendance records as shown by the school statistics. The system of finding average and percentage attendance from the total enrolment and the aggregate attendance for the year is recognized as misleading, since many children begin attending school after Easter or in September, while others leave at the end of June and yet all these are considered, in finding average attendance, as pupils enrolled for the entire year, with the result that the average and percentage attendance as recorded is much below the true mark. While this system must be continued, yet as soon as teachers begin to report in addition the aggregate possible attendance of their pupils other more exact comparisons may be made.

As an illustration of attendance in the rural schools of the older settled parts of the province reference may be made to the county of Wentworth, where the percentage of attendance in the rural schools, urban and suburban schools being excluded, was 87 for the month of November, a high standard for this month with its variable weather.

It may be of interest to note the change in attendance during the last decade. In 1911, according to the Dominion Census, the population of Ontario was 2,527,292, and in 1921, according to published statements, 2,931,264 thus showing an increase of 15.98%. The enrolment in the elementary schools of the province in 1910 was 510,700 with an average attendance of 306,593. In 1920

the enrolment was 604,923, being an increase of 18.44%, while the average attendance was 393,141, an increase of 29.20%. That is to say, while the population of the province increased 15.98%, the enrolment increased 18.44% and the average attendance increased 29.20%.

The Officers, their Duties and Salaries

It is pleasing to be able to state that the relationship between the appointing bodies and the attendance officers is becoming more intimate and sympathetic. The efficient attendance officer is no longer regarded as a mere official whose duty it is to summon neglectful parents before a magistrate. He is himself recognized as delinquent if he does not attempt to discover and to remove, by an appeal to proper authority, the causes which produce truancy and irregularity. His duties therefore require patience, tact and perseverance. He may often be an intermediary between the school and the home and can do much to smooth away causes of friction which prevent a child's steady progress in his class. He knows where charity may be dispensed and, endeavouring to enlist the services of every body which interests itself in the welfare of boys and girls, he co-operates with all good social agencies. He brings to the attention of the officers of the Children's Aid Society, the Mothers' Allowance Commission, and other institutions such cases as need their special care. In the case of adolescents who must leave school he acts in the capacity of a vocational guide himself, or in harmony with any local juvenile placement agency which endeavors intelligently to put young people in employment and to guide their after steps so that they may make satisfactory progress in their chosen work. In addition to this he must be able to lay before the local education authorities reports and information from which they may be able to organize and maintain for the handicapped and for the part-time pupils special classes to which reference is made later in this report. In connection with this duty there should be mention of the provisions made in several places for the education of boys and girls over fourteen years of age who are out of school for some time and not in regular employment. Lists of these adolescents presented to boards by attendance officers resulted in the formation of special ungraded classes under strong and competent teachers, who are using every effort to render fit for full citizenship young people who otherwise were bidding fair to become not assets but liabilities of the province. Particular mention might be made of the work being done in this respect by the attendance department and the boards of Windsor.

In some cases local appointing bodies fail to realize the value of the work to be done by efficient officers, and neglect to pay salaries sufficient to attract men and women of the right type. Salaries vary greatly. In urban centres for full time the range is from about \$1,000.00 to \$2,500.00 per annum. In rural communities few officers are paid more than fifty cents per school per month, though preventable irregularity is, on the whole, greater in rural than in urban communities. In spite of the inadequate salaries paid, many, very many, excellent officers have accepted appointments, and I should like to commend to you their regard for children, their knowledge of school organization, their faith in education, their tact and good judgment, their vision by which looking into the future they see the children of to-day the adults of to-morrow, living amid conditions even more complex and exacting than those of to-day. In order to induce appointing bodies to pay more adequate salaries, it may seem wise to you to consider apportioning some part of the grants paid to schools on the basis of regularity in attendance and the salaries paid the local officers.

The Adolescent School Attendance Act

The Adolescent School Attendance Act has come into effect very quietly. In no other country or state, so far as can be learned, has an extension of the limit of compulsory schooling been made with so little friction as in Ontario. This condition is due mainly to two reasons: first, to the very gradual enforcement of the Act by stages, and second, to the preparation made by the Legislature and the Department for such a law by the passing of such Acts as the permissive-mandatory Act of 1912 and 1916 and the Industrial Education Act, with the provision for Advisory Committees. It is true, too, that there has been but little demand for juvenile labour during the past year.

Some interesting figures have been received in connection with the attendance at school of adolescents of the fourteen and fifteen-year-old young group; for example, in St. Catharines practically all the fourteen-year-old young people are in the schools, 312 out of a possible 337.

St. Catharines, Windsor and Fort William illustrate three different ways in which the education authorities have made an independent census of the school children: St. Catharines by the senior pupils under the guidance of the teachers and the direction of the board and attendance officer; Windsor by the teachers themselves; and Fort William by the attendance officer during the mid-summer vacation. Such a census, made by the school authorities, will discover pupils not enrolled on the register of any school, among them children handicapped physically or mentally, and will provide information for the board in planning for extension of accommodation.

The vital test of the Adolescent School Attendance Act will probably come when part-time courses are established next September. In the organization and maintenance of these classes boards of education and of school trustees will have an opportunity of showing what can be done by local education authorities in providing courses to meet local conditions. School attendance officers of the municipalities concerned should be able to furnish information to assist the education authorities in planning such courses. They will be able to present the names, ages and addresses of all adolescents fourteen and fifteen years of age who require part-time instruction, the nature and situation of their occupations, their educational qualifications and special aptitudes, and also their desires in relation to special courses or subjects which may be provided. With this information properly arranged and classified, the local authorities should have little difficulty in designing courses of study which will not only interlock the school life of the child with his chosen calling, but will provide a course for broader citizenship.

While a discussion upon the question of accommodation, except in so far as lack of accommodation may be regarded as an excuse for non-attendance at school, does not properly lie in my province, yet I should like to mention how boards of growing urban centres are coping with the problem of increased attendance. Some are using portable schools; others are utilizing basements and assembly halls; while others still are renting houses, shops or halls and making needful alterations to render them suitable for class room purposes. It would seem practicable for boards to consider similar methods in solving the problem to be presented next September when Section 9 of the Adolescent School Attendance Act requiring the establishment of part time courses of instruction in urban centres of five thousand population, becomes operative.

APPENDIX J

REPORT OF THE DIRECTOR OF PROFESSIONAL TRAINING

TO THE HONOURABLE R. H. GRANT, M.P.P.,
Minister of Education for Ontario.

I have the honour to submit a report on the work of the Provincial Schools for the training of teachers for the year 1921.

The year 1921 has made a most satisfactory contribution toward the attainment of the high ideal set by the educators of Ontario half a century ago, that no person should be intrusted with the care of a school without a reasonable measure of professional training. Not only has there been a general increase in the number of young men and women who have entered the training schools during the year, but it is especially gratifying to note that there is a marked increase in the number of those who have enrolled in the courses leading to life certificates. It may be mentioned in this regard that the enrolment of candidates for High School Assistants' certificates shows an increase of 68 over the previous year, that of candidates for First Class Public School certificates, an increase of 25, and that of candidates for Second Class Public School certificates an increase of 150. Visits of inspection were made to the various training and practice schools during the year, the condition of the schools and the character of the instruction being in general satisfactory.

Enrolment

The following is a statement of the number of applicants admitted during the year to the various courses at the College of Education, and the Normal and Model Schools.

	Males.	Females.
To the High School Assistants' Course	51	88
To the Domestic Science Course		12
To the First Class Course	60	118
To the Second Class Course	157	1,182
To the Kindergarten-Primary Course		327
To the Third Class Course	14	127
To the District Certificate Courses	29	331

A noteworthy feature of the training classes for 1921, is the enrolment of 51 veterans of the Great War as teachers-in-training at the different schools. Of this number 28 are in attendance at the College of Education as candidates for High School Assistants' certificates.

Graduating Students

The following table gives the number and grade of certificates issued to successful students graduating from the various Training Schools during 1921:

High School Assistants' certificates	70
Domestic Science certificates	13
First Class certificates	155
Second Class certificates	1,068
Limited Third Class certificates	229
Kindergarten-Primary certificates	120
District certificates	325

Ideals of the Ontario Training Schools

In any adequate scheme of teacher training due emphasis must be placed upon the academic preparation of candidates for professional certificates. Owing, however, to the high standards of scholarship maintained by the High Schools and Colleges of Ontario, where candidates for teachers' certificates for the most part receive their academic preparation, the Provincial Training Schools are largely relieved of the labour of giving purely academic instruction. There does remain to the training school, however, the necessity of leading the teacher-in-training to realize how academic knowledge is intended to meet the requirements of life. A first aim of the training school is, therefore, to lead its students to understand how the so-called subjects of study enter as a means into their real work of developing and training for right living the bodies, minds and characters of the children with whom they are to be entrusted.

It is further realized by our training schools that academic knowledge, however broad, does not necessarily make a teacher, and that he who would practise a profession must master both in theory and in practice the principles and methods of his profession. Thus a second great aim of the training school is to acquaint the teacher-in-training with the fundamental problems with which he will be confronted, with the laws of mental activity and with the bearing of these laws upon his work of directing and instructing the child; and to develop in him by adequate observation and practice, a measure of skill in the art of teaching.

Finally it is realized by our training schools that the ultimate work of the teacher will depend largely upon his own ideals and habits of life. A supreme concern is, therefore, the character and the amount of discipline the student is giving to his own life while a teacher-in-training. Hence it is aimed to have the candidate for the teaching office so discipline himself mentally and morally that he may go out into life, not with a desire to labour for selfish ends, but with a realization that his mission is the betterment of humanity and that he can fulfil this mission only through a life of self-denying service.

Musical Education

Through their efforts with the young teachers leaving the Normal Schools, the Instructors in Music at these Institutions are especially endeavouring to give a new impetus to the teaching of music in the elementary schools. In this connection investigations have been made at the Normal and Normal Model Schools during the year as to the value of the phonograph in school work. The results thus far indicate that this instrument may be made of real value in teaching music appreciation, in physical culture exercises, in teaching rote songs and in the story work and games of the junior classes. A further study of the problem is to be made during 1922.

Changes in Staffs

The following is a statement of the changes in and additions to the staffs of the Provincial Normal and Normal Model Schools made during 1921. These included both appointments to fill vacancies arising through resignations and additions made to certain staffs to provide for increases in attendance.

S. J. KEYES, B.A., D.PAED., transferred from the Toronto Normal School to the Ottawa Normal School, to fill the vacancy caused by the resignation of Dr. W. J. Karr.

- H. W. KERFOOT, B.A., appointed an additional master at the Ottawa Normal School.
- JOHN W. FIRTH, B.A., appointed master at the Toronto Normal School to fill the vacancy caused by the transfer of Dr. Keyes to Ottawa.
- J. G. MCEACHREN, B.A., B.PAED., appointed an additional master at the London Normal School.
- MISS E. M. EVERSON, appointed Instructor in Household Science at the Stratford Normal School to fill the vacancy caused by the resignation of Miss F. McNally, B.Sc.
- MISS L. MONAHAN, appointed Instructor in Household Science at the Ottawa Normal School to fill the vacancy caused by the resignation of Miss M. G. McEwen.
- W. E. MCKENDRY, B.A., appointed an assistant at the Ottawa Normal Model School to fill the vacancy caused by the resignation of Miss J. Foster.
- THORNTON MUSTARD, appointed Headmaster of the Toronto Normal Model School to fill the vacancy caused by the resignation of Milton A. Sorsoleil, B.A.
- CLARENCE D. BOUCK, appointed assistant at the Toronto Normal Model School to fill the vacancy caused by the promotion of Thornton Mustard.
- CHARTERS T. SHARPE, appointed assistant at the Toronto Normal Model School to fill the vacancy caused by the resignation of John F. Montgomery, B.A.
- FREDERICK W. SCHNICK, appointed an additional assistant at the Toronto Normal Model School.
- MISS EDITH V. PHILLIPS, appointed assistant at the Toronto Normal Model School to fill the vacancy caused by the resignation of Miss C. E. Kniseley.
- MISS MAUD WATTERWORTH, appointed an additional assistant at the Toronto Normal Model School.

A detailed statement of the statistics of the Provincial Training Schools is presented in Appendix V, pages 323-326.

Teachers' Institutes

Annual Conventions were held by the 96 Teachers' Institutes throughout the Inspectorates of the Province. Practically all of these meetings were visited by Departmental Lecturers selected from the staffs of the Provincial Training Schools. It is worthy of note that a number of Institutes held their conventions at points of educational interest outside their own Inspectorates, thus enabling their members to acquaint themselves at first hand with important educational advances in other parts of the Province. Further information regarding the Teachers' Institutes is given in Appendix I, on pages 278-281.

Your obedient servant,

S. A. MORGAN,

Toronto, January, 1922.

APPENDIX K

STATISTICS OF ELEMENTARY AND SECONDARY SCHOOLS

Summary

I. ELEMENTARY SCHOOLS

a. Public Schools

Number of Public Schools in 1920.....		6,207
Increase for the year.....	28	
Number of enrolled pupils of all ages in the Public Schools during the year (exclusive of Continuation and Night School pupils).....		488,091
Increase for the year.....	16,362	
Average daily attendance of pupils.....		310,029
Increase for the year.....	1,321	
Percentage of average attendance to total attendance.....		63.52
Decrease for the year.....	1.92	
Number of persons employed as teachers in the Public Schools: men, 1,397; women, 10,756; total.....		12,153
Increase for the year.....	350	
Number of teachers who attended Normal School.....		9,248
Increase for the year.....	316	
Number of teachers who attended Normal College or Faculty of Education.....		1,212
Increase for the year.....	56	
Number of teachers with a University degree.....		138
Increase for the year.....	30	
Average annual salary for male teachers.....		\$1,575
Increase for the year.....	\$227	
Average annual salary for female teachers.....		\$1,000
Increase for the year.....	\$183	
Average experience of male teachers.....		13.2 years
Average experience of female teachers.....		7.9 years
Amount expended for teachers' salaries.....		\$12,056,057
Amount expended for Public School Houses (sites and buildings).....		\$4,327,472
Amount expended for all other purposes.....		\$6,460,518
Total amount expended for Public Schools.....		\$22,844,047
Increase for the year.....	\$6,013,201	
Cost per pupil (enrolled attendance).....		\$46.80
Increase for the year.....	\$11 13	

b. Roman Catholic Separate Schools

Number of Roman Catholic Separate Schools in 1920.....		594
Increase for the year.....	35	
Number of enrolled pupils for all ages.....		76,881
Increase for the year.....	2,048	
Average daily attendance of pupils.....		52,370
Increase for the year.....	3,081	
Percentage of average attendance to total attendance.....		68.11
Increase for the year.....	2.25	
Number of teachers.....		1,716
Increase for the year.....	130	
Amount expended for teacher's salaries.....		\$1,013,981
Amount expended for school houses (sites and buildings).....		\$465,099
Amount expended for all other purposes.....		\$893,385

Total amount expended on R. C. Separate Schools.....		\$2,372,465
Increase for the year.....	\$351,684	
Cost per pupil (enrolled attendance).....		\$30 85
Increase for the year.....	\$3 85	

c. Protestant Separate Schools

Number of Protestant Separate Schools (included with Public Schools, a) in 1920.....		5
Decrease for the year.....	1	
Number of enrolled pupils.....		412
Decrease for the year.....	52	
Average daily attendance of pupils.....		260
Decrease for the year.....	54	

d. Night Elementary Schools

Number of Night Schools in 1920-21.....		15
Increase for the year.....	4	
Number of pupils enrolled.....		1,569
Increase for the year.....	726	
Number of teachers engaged.....		40
Increase for the year.....	17	

II. SECONDARY SCHOOLS

a. High Schools and Collegiate Institutes

Number of High Schools (including 47 Collegiate Institutes) 1920-21.....		168
Increase for the year.....	1	
Number of pupils enrolled in High Schools.....		34,128
Increase for the year.....	1,092	
Average daily attendance of pupils.....		28,952
Increase for the year.....	2,136	
Percentage of average to total attendance.....		84.83
Increase for the year.....	3.66	
Number of teachers in High Schools.....		1,207
Increase for the year.....	39	
Average annual salary, Principals.....		\$2,563
Increase for the year.....	\$350	
Average annual salary, Assistants.....		\$1,987
Increase for the year.....	\$224	
Average annual salary, all Teachers.....		\$2,067
Increase for the year.....	\$239	
Highest salary paid.....		\$4,500
Increase for the year.....	\$100	
Amount expended for teachers' salaries, 1920.....		\$2,269,387
Amount expended for school houses (sites and buildings).....		\$364,264
Amount expended for all other purposes.....		\$955,282
Total amount expended on High Schools, 1920.....		\$3,588,933
Increase for the year.....	\$840,891	
Cost per pupil, enrolled attendance.....		\$105.16
Increase for the year.....	\$21.98	

b. Continuation Schools

Number of Continuation Schools, 1920-21.....		144
Increase for the year.....	7	
Number of pupils in attendance.....		5,823
Increase for the year.....	697	
Average daily attendance of pupils.....		4,790
Increase for the year.....	835	
Percentage of average to total attendance.....		82.26
Increase for the year.....	5.11	
Number of teachers.....		255
Increase for the year.....	11	
Average annual salary, Principals.....		\$1,579
Increase for the year.....	\$276	

Average annual salary, Assistants.....		\$1,229
Increase for the year.....	\$300	
Highest salary paid.....		\$3,000
Increase for the year.....	\$900	
Amount expended on teachers' salaries, 1920.....		\$317,602
Amount expended for school houses (sites and buildings).....		\$34,774
Amount expended for all other purposes.....		\$120,709
Total amount expended on Continuation Schools, 1920.....		\$ 473,085
Increase for the year.....	\$54,384	
Cost per pupil, enrolled attendance.....		\$81.24
Increase for the year.....	\$5.42	

c. Night High Schools

Number of Night High Schools in 1920-21.....		31
Increase for the year.....	7	
Number of pupils enrolled.....		5,411
Increase for the year.....	369	
Number of teachers engaged.....		188
Increase for the year.....	22	

d. Industrial, Technical, and Art Schools

Number of Day Industrial, Technical and Art Schools, 1920-21.....		13
Increase for the year.....	1	
Number of full time pupils enrolled.....		2,600
Average daily attendance of full time pupils.....		2,123
Number of part time pupils in Day Schools.....		907
Number of special pupils in Day Schools.....		1,019
Number of teachers engaged in Day Schools.....		191
Increase for the year.....	14	
Number of Evening Industrial, Technical and Art Schools, 1920-21..		51
Increase for the year.....	2	
Number of pupils enrolled.....		27,297
Increase for the year.....	770	
Number of teachers engaged.....		909
Increase for the year.....	64	
Amount expended on teachers' salaries, day and evening schools, 1920		\$455,902
Amount expended on school houses (sites and buildings).....		\$514,919
Amount expended for all other purposes.....		\$377,084
Total amount expended on day and evening industrial, technical and art schools, 1920.....		\$1,347,905
Increase for the year.....	\$688,832	

III. GENERAL

Elementary and Secondary Schools

Comparative School Statistics, 1867=1920

I. PUBLIC AND SEPARATE SCHOOLS

These elementary school tables 1, 2, 3, 4, and 5, for the purpose of comparison with previous years in which the Separate Schools were included with Public Schools, include Roman Catholic and Protestant Separate Schools. The tables A, B, C, D, and E give the statistics of the Public Schools, including Protestant Separate Schools; the statistics of the R. C. Separate Schools are given in Tables F and G; those of the Protestant Separate Schools appear in Table T; and the Night Schools in Table U.

1. School Population Attendance

The school population (5 to 16 and 5 to 21 years) of the Province, as ascertained by the assessors, and the school attendance are given in the following table:

Year	Population 5 to 16 years	Population 5 to 21 years	Total number of enrolled pupils	Boys	Girls	Average daily attendance	Percentage of average attendance to total number attending school
1867.....	447,726		401,643	213,019	188,624	163,974	40.82
1872.....	495,756		454,662	238,848	215,814	188,701	41.50
1877.....	494,804		490,860	261,070	229,790	217,184	44.25
1882.....	483,817		471,512	246,966	224,546	214,176	45.42
1887.....		611,212	493,212	259,083	234,129	245,152	49.71
1892.....		595,338	485,670	253,091	232,579	253,830	52.26
1897.....		590,955	482,777	251,677	231,100	273,544	56.66
1902.....		584,512	454,088	232,880	221,208	261,480	57.58
1907.....		590,285	448,218	229,794	218,424	266,503	59.45
1912.....		609,127	467,022	239,187	227,835	291,210	62.35
1917.....	512,562	628,996	527,664	266,255	261,409	342,571	64.92
1919.....	513,600	652,264	546,562	275,628	270,934	357,997	65.49
1920.....	527,921	667,379	564,972	285,362	279,610	362,399	64.14

2. Classification of Pupils

Year	Kindergarten	Kindergarten-Primary	1st Reader, Part I, or Primer	1st Reader, Part II, or 1st Book	2nd Book	3rd Book	4th Book	5th Book, or beyond 4th Book
1867.....				*79,365	98,184	83,211	68,896	71,987
1872.....				*160,828	100,245	96,481	67,440	29,668
1877.....				*153,630	108,678	135,824	72,871	19,857
1882.....				*165,834	106,229	117,352	71,740	10,357
1887.....			115,657	76,704	100,533	108,096	81,984	10,238
1892.....			114,932	73,015	96,074	99,345	88,934	13,370
1897.....			110,567	70,808	91,330	99,682	89,314	21,076
1902.....			107,441	69,062	85,732	90,630	83,738	17,485
1907.....			112,552	60,194	84,622	89,371	85,752	15,727
1912.....			126,100	67,368	92,728	88,811	85,213	† 6,802
1917.....	16,515	2,793	125,321	73,996	106,034	105,062	91,989	† 5,954
1919.....	16,386	7,560	128,826	75,171	106,107	110,115	97,069	† 5,328
1920.....	16,529	9,195	131,262	76,859	106,969	114,715	103,275	† 6,168

Note.—Kindergarten attendance is not included for the years previous to 1917.

* In 1st Reader.

† Exclusive of Continuation School Pupils.

The following table classifies the pupils in various forms, as to rural and urban schools :

Rural Schools									
Year	Kindergarten	Kindergarten-Primary	First Reader Part I or Primer	First Reader Part II or First Book	Second Book	Third Book	Fourth Book	Fifth Book or beyond Fourth Book	Totals
1904.....	60,784	36,941	47,930	50,297	47,289	9,892	253,133
1907.....	60,470	31,538	46,219	48,247	46,815	8,958	242,247
1912.....	62,712	30,293	43,775	42,450	44,049	† 3,984	227,263
1917.....	75	58,290	30,657	44,407	43,834	41,321	† 2,926	221,510
1919.....	1,923	59,526	30,422	42,373	44,430	40,559	† 2,403	221,636
1920.....	2,035	60,065	30,748	43,107	45,182	42,660	† 2,647	226,444
Urban Schools (cities, towns and incorporated villages.)									
1904.....	44,456	27,800	37,299	39,814	35,815	6,304	191,488
1907.....	52,082	28,656	38,403	41,124	38,937	6,769	205,971
1912.....	63,388	37,075	48,953	46,361	41,164	† 2,818	239,759
1917.....	16,515	2,718	67,031	43,339	61,627	61,228	50,668	† 3,028	306,154
1919.....	16,386	5,637	69,300	44,749	63,734	65,685	56,510	† 2,925	324,926
1920.....	16,529	7,160	71,197	46,111	63,862	69,533	60,615	† 3,521	338,528

† Exclusive of Continuation School pupils.

The following table compares the attendance and gives the percentages from rural and urban municipalities for several years :

Year	Attendance in Rural Schools	Attendance in Urban Schools
1903.....	260,617 or 57.88% of total	189,661 or 42.12% of total
1907.....	242,247 or 54.05% " "	205,971 or 45.95% " "
1912.....	227,263 or 48.66% " "	239,759 or 51.33% " "
1917.....	221,510 or 41.97% " "	306,154 or 58.02% " "
1919.....	221,636 or 40.55% " "	324,926 or 59.44% " "
1920.....	226,444 or 40.08% " "	338,528 or 59.91% " "

NOTE:—Kindergarten attendance for years previous to 1916 not available for the above tables.

3. Teachers' Certificates

Year	Number of teachers	Male	Female	1st Class	2nd Class	3rd Class	Kindergarten-Primary	Kindergarten	Manual Training	Household Science	Other certificates, including old County Board, Dist. and Temp	Teachers who attended Normal School	* Normal College or Faculty of Education
1867.....	4,890	2,849	2,041	1,899	2,454	386	151	666
1872.....	5,476	2,626	2,850	1,337	1,477	2,084	578	828
1877.....	6,468	3,020	3,448	250	1,304	3,926	988	1,084
1882.....	6,857	3,062	3,795	246	2,169	3,471	971	1,873
1887.....	7,594	2,718	4,876	252	2,553	3,865	924	2,434
1892.....	8,680	2,770	5,910	261	3,047	4,299	200	873	3,038
1897.....	9,351	2,784	6,567	343	3,386	4,465	223	934	3,643
1902.....	9,614	2,294	7,320	608	4,296	3,432	247	1,031	4,774
1907.....	10,170	1,783	8,387	715	3,887	3,452	277	1,839	4,587
†1912.....	11,128	1,511	9,617	674	6,419	1,804	371	1,860	6,705	614
†1917.....	12,762	1,317	11,445	1,106	8,784	1,317	66	310	33	38	1,108	9,203	1,053
†1919.....	13,389	1,328	12,061	1,246	9,193	1,159	130	283	48	73	1,257	9,697	1,223
†1920.....	13,869	1,506	12,363	1,303	9,544	1,160	237	181	61	72	1,311	10,090	1,280

* For the years previous to 1912 the numbers who attended Normal College or the Faculty of Education are included in the preceding column.

The men engaged in teaching in these schools in 1920 formed 10.85 per cent. of the whole number. In 1919 they formed 9.91 per cent.

The number of teachers and the class of certificates, in the Public Schools alone, in each County and District of the Province will be found in Table C of this Appendix.

The following table classifies the teachers and certificates as to rural and urban schools:

	Teachers			Certificates		
	Total	Male	Female	1st Class	2nd Class	3rd Class
Rural Schools, 1904.....	5,974	1,469	4,505	152	1,944	3,107
Rural Schools, 1907.....	6,038	1,201	4,837	180	1,542	3,079
*Rural Schools, 1912.....	6,143	894	5,249	165	3,002	1,463
*Rural Schools, 1917.....	6,455	655	5,800	343	4,232	1,129
*Rural Schools, 1919.....	6,597	558	6,039	348	4,362	958
*Rural Schools, 1920.....	6,714	616	6,098	330	4,503	908
Urban (cities, towns and incorporated villages), 1904.....	3,580	606	2,974	483	2,248	289
Urban, 1907.....	4,132	582	3,550	535	2,345	373
*Urban, 1912.....	4,985	617	4,368	509	3,417	341
*Urban, 1917.....	6,307	662	5,645	763	4,552	188
*Urban, 1919.....	6,792	770	6,022	898	4,831	201
*Urban, 1920.....	7,155	890	6,265	973	5,041	252

In the rural schools in 1920 the men formed 9.17 per cent., and in the urban schools, 12.43 per cent. of the number of teachers employed in each case.

* Exclusive of Continuation School teachers.

4. Teachers' Salaries and Experience

Teachers' Salaries

Year	Highest salary paid	Average salary, male teacher, province	Average salary, female teacher, province	Average salary, male teacher, cities	Average salary, female teachers, cities	Average salary, male teachers, towns	Average salary, female teacher, towns	Average salary, male teacher, incorporated villages	Average salary, female teacher, incorporated villages	*Average salary, male teacher, rural schools	*Average salary, female teacher, rural schools	Average salary, male teacher, all urban schools	Average salary, female teacher, all urban schools
1867.	\$ 1,350	\$ 346	\$ 226	\$ 532	\$ 243	\$ 464	\$ 240	\$	\$	\$ 261	\$ 189	\$	\$

* Incorporated villages included from 1867 to 1902 inclusive.

Increases in salaries in the cities, towns, villages and rural schools are shown in the above table. In Table C the average salaries for 1920 of the Public School teachers of the various Counties and Districts are given separately, and summarized for the cities, towns and villages. This table also states the salaries paid to teachers according to the grade of certificate held, and illustrates to what extent the teacher with the higher certificate commands the higher salary. The average salaries for the Province are as follows:

	Male				Female			
	1912	1917	1919	1920	1912	1917	1919	1920
First Class certificates.....	\$1,340	\$1,548	\$1,960	\$2,104	\$634	\$728	\$898	\$1,075
Second Class certificates....	757	916	1,101	1,367	557	673	844	1,034
Third Class and District certificates.....	524	562	664	873	458	507	592	768

Teachers' Experience

The length of service or experience of the teachers engaged in the Public Schools is also shown in Table C, where the numbers who have taught from less than one year up to forty years and over are given for each year.

The average experience in the Public Schools at the end of 1920 was as follows:

Male teachers 13.2 years.

Female teachers, 7.9 years.

All teachers, 8.5 years.

5. Receipts and Expenditures

Year	Receipts				Expenditures					
	Legislative grants	Municipal school grants and assessments	Clergy reserve funds balances and other sources	Total receipts	Teachers' salaries	Sites and buildings school houses	Libraries, maps, apparatus, prizes, etc.	Rent, repairs, fuel and other expenses	Total expenditure	Cost per pupil
1867.....	\$ 187153	\$ 1151583	\$ 331599	\$ 1670335	\$ 1093517	\$ 149195	\$ 31354	\$ 199123	\$ 1473189	\$ c. 3 67

The increase for the year in the amount paid as teachers' salaries was \$2,909,639. The total expenditure increased by \$6,364,885.

These tables show the expenditure per pupil for the years as given below:

Average cost per pupil (enrolled attendance)

	1902	1907	1912	1917	1919	1920
Teachers' salaries.....	\$7 04	\$9 79	\$13 08	\$15 91	\$18 59	\$23 13
Sites and buildings.....	0 95	2 72	5 95	3 77	5 25	8 48
All other expenses.....	2 63	4 34	5 11	7 06	10 65	13 02
For all purposes.....	10 62	16 85	24 14	26 74	34 49	44 63

Average cost per pupil (average attendance)

	1902	1907	1912	1917	1919	1920
Teachers' salaries.....	\$12 23	\$16 47	\$20 98	\$24 52	\$28 38	\$36 07
Sites and buildings.....	1 65	4 58	9 54	5 80	8 01	13 22
All other expenses.....	4 57	7 30	8 19	10 87	16 26	20 29
For all purposes.....	18 45	28 35	38 71	41 19	52 65	69 58

The expenditure per pupil (enrolled attendance) for 1920 in the Public Schools alone will be found in Table E, and for the R. C. Separate schools in Table F. The expenditure will there be shown as to rural schools, cities, towns, and villages separately.

II. ROMAN CATHOLIC SEPARATE SCHOOLS

Year	Schools, Teachers and Attendance						
	Schools open	Teachers	Pupils	Boys	Girls	Average daily attendance	Percentage of average attendance to total number attending schools
1867.....	161	210	18,924	8,606	45.47

† Including all expenditure except for Teachers' salaries.

An increase of 2,045 in the enrolment and of \$351,684 in the expenditure in 1920 are noticed in the above tables. The expenditure per pupil of enrolled attendance increased from \$27.00 to \$30.85. Detailed statistics in reference to these schools will be found in Tables F and G.

III. PROTESTANT SEPARATE SCHOOLS

The following is a complete list of the Protestant Separate Schools of the Province:—No. 1 Grattan, No. 2 Hagarty, L'Original, and Penetanguishene (two schools).

They were attended by 412 pupils in 1920. The whole amount expended for their maintenance and permanent improvements was \$15,805.96. One teacher held a First Class Certificate, nine teachers held Second Class certificates, and one held a District certificate.

Complete statistics for these schools will be found in Table T.

IV. CONTINUATION SCHOOLS

The following table gives statistics of the "Continuation Classes, Grade A," up to and including 1907. Thereafter they are known as "Continuation Schools." Formerly the statistics of these schools were included with the statistics of the Public and Separate Schools, consequently certain items for the years 1897-1907 cannot be given.

Year	Schools	One-teacher schools	Two-teacher schools	Three-teacher schools	Number of teachers	Receipts		Expenditure		Total value of Equipment	Number of Pupils	Percentage of average attendance to total attendance
						Legislative grant	Total Receipts	Paid for Teachers' Salaries	Total Expenditure			
						\$	\$	\$	\$	\$		
1897.....	27	20	7	34	2,700	1,275

Notes from Public Libraries' Register

Fourteen new libraries were added during 1921.

Two libraries were added to the list of Free Libraries during 1921: London, South East Branch and Saltfleet.

Kintore Library has been improperly placed for a number of years in the list of Free Libraries. It has now been transferred to the list of Association Libraries.

Twelve Association Libraries have been added to the list, all of which are new libraries. They are Allenford, Chalk River, Cochrane, Craighurst, Delaware, Ivanhoe, Markstay, New Toronto, Southcote, Stratton, Tobermory, and Varna.

Grants to Historical, Literary and Scientific Institutions

The following Historical, Literary and Scientific Institutions, etc., duly reported according to the requirements of the Act, and received the undermentioned grants during the fiscal year ending October 31st, 1921:

	\$	c.
Brant Historical Society	100	00
Elgin Historical and Scientific Association	100	00
Essex Historical Society	100	00
Huron Institute	100	00
Kent Historical Society	100	00
Kingston Historical Society	100	00
L'Alliance Francaise, Ottawa	400	00
Lennox and Addington Historical Society	100	00
Lundy's Lane Historical Society	200	00
London and Middlesex Historical Society	100	00
Niagara Historical Society	300	00

APPENDIX T

LIST OF CERTIFICATES ISSUED BY THE DEPARTMENT OF
EDUCATION, 1921

I. Public School Inspectors' Certificates

Evans, Josiah J., B.A., (Queen's) Mathieson, Elsie, B.A., (Toronto)
Leitch, Alexander G., B.A., (Queen's) Tucker, Mary C., M.A., (Toronto)

II. High School Principals' Certificates

Barton, Ambrose R., B.A.	O'Neill, Morgan J., M.A. (Maths. & Phys.)
Dobson, George C., B.A.	Oates, Thomas W., B.A. (Commercial)
Elmslie, Wallace, B.A. (Mods. & History)	Park, Leonora, B.A.
Fraser, Christine M., B.A.	Pugh, Harry C., B.A.
Froats, Willis C. M.A. (Classics)	Ramage, George E., B.A. (Science)
Gordon, James I., B.A.	Robb, George W., B.A., (Maths. & Phys.)
Halpenny, D. Milton, B.A.	Rodden, Mary K., B.A.
Hisey, Abraham, B.A. (Science)	Rogers, William C., M.A.
Hitsman, Samuel A., B.A. (Commercial)	Rutherford, William H., M.A., D.Paed. (Maths.)
Jackson, J. Sanfield, B.A. (Science)	Smith, Wallace W., B.A.
Keeling, Wilford Lorne, B.A.	Spencer, Watson G., B.A.
Knowles, John H., B.A.	Steele, Walter S., B.A.
Lewis, Roy E., B.A.	Stewart, Annie J., B.A.
MacPherson, Pearl, B.A. (Classics)	Summerby, Fredrika, B.A.
McCrimmon, Leon R., M.A. (Science)	Thomas, Neil J., B.A.
McKillop, Archibald F., B.A. (Maths.)	Thompson, Alva E. (Mr.) B.A. (Maths. & Phys.)
McTurk, Isabel, B.A.	Waddell, Thomas K., B.A.
McWilliams, Walter A., B.A.	White, Lloyd, B.A.
Manning, Ernest D., B.A.	Whitton, Frederick A., B.A. (Mods. & Hist)
Maxwell, Mabel I., B.A.	Young, Ralph, B.A. (Science)
Milhausen, Albert J., B.A.	
Morgan, Grace, B.A. (Mods. & Hist.)	

III. High School Assistants' and Specialists' Certificates

Abbot, Florence M.	Carr-Harris, Mrs. Marion, B.A.
Alderson, Bessie.	Carscadden, Helen M.B., B.A.
Anderson, Beatrice E. (Commercial)	Carter, George W., M.A.
Anglin, Sarah.	Case, H. James. (Phys.C.)
Armstrong, Emily, B.A. (Phys. C.)	Castleman, Hilda V., B.A.
Armstrong, Gladys W., B.A.	Chisholm, Mrs. Jessie, B.A. (Mods. & Hist.)
Armstrong, Mabel R.	Clark, Olive L., M.A. (Classics)
Austin, Margery I., B.A. (Eng. & Hist.)	Cook, Ida M.
Ballantyne, George A., M.A. (Maths. & Phys.)	Cook, Marjorie, B.A. (Science)
Barnby, Vera E. (Phys. C.)	Crough, Beatrice E.
Barton, Ambrose R., B.A. (Art and Phys.C.)	Cummer, May E. (Commercial)
Baxter, Helen F., B.A.	Currie, John E., B.A.
Bayne, Mary G.	Davidson, Annie K., B.A. (Art)
Beck, Clinton G., B.A. (Mods. & Hist., Fr. & Ger.)	Davidson, Viola M., B.A. (Science)
Belcher, Norah T., B.A. (Phys.C.)	Devitt, Leslie K., (Phys. Cult.)
Bodkin, Gertrude L., B.A.	Dinsmore, Herbert B., B.A. (Phys. C.)
Bouchard, Mary A.C., B.A. (Mods. & Hist.)	Dobson George C. (Phys. Cult.)
Boyle, Margaret, B.A. (Eng. & Hist.)	Dolbear, Callie C. (Art)
Bridgman, Norma E., B.A. (Phys.C)	Dore, Harry C.
Brown, Mona.	Dorrance, Annie V. (Art)
Bryan, Cameron A.	Durnin, Edward W., B.A. (Phys. C.)
Butcher, Cecil W., B.A. (Maths.)	Edgar, Margaret, B.A.
Byfield, Gwendolyn C., B.A. (Phys.C.)	Ellis, George E., B.A.
Cameron, James M., B.A. (Science)	Erb, William O., B.A. (Maths. & Phys.)
	Ewing, Florence M., B.A. (Phys. C.)

III. High School Assistants' and Specialists' Certificates (Continued)

- Ferguson, Arthur W., B.A. (Phys. C.)
 Ferguson, Muriel B., (Art)
 Ferguson, Stanley, B.A.
 Fielding, Ewart L., B.A. (Phys. Cult.)
 Filshie, Mrs. Lucille (Art)
 Finch, Ethel B., B.A. (Mods. & Hist.)
 Findlay, Edith C., B.A. (Ho. Science.)
 Forbes, William B., (Phys. C.)
 Franklin, Helen A., B.A. (Eng.&Hist.)
 Fraser, Sadie, B.A.
 Galbraith, Janet E.
 Gartlan, Elizabeth, B.A.
 Gendron, Muriel M., B.A.
 Gordon, Mary M., (Phys. C.)
 Goulding, Hanna M., (Phys. C.)
 Graham, Annie, B.A.
 Graham, Gladys M., B.A.
 Gregory, Alice E., B.A. (Phys. C.)
 Greig, Earl H., B.A. (Phys. C.)
 Grieve, Bessie M.
 Griffin, Elizabeth H., (Sr. St. Dorothy)
 Hambly, Philo K., B.A., (Classics)
 Hampson, Edward, B.A. (Commercial)
 Hanbidge, Frances J., (Phys. C.)
 Harper, Gertrude A., B.A., (Commercial)
 Harris, Emarilla B.
 Hartley, Floyd C., B.A. (Phys. C.)
 Harty, Norma I.
 Helmkey, Dora L., B.A. (Maths)
 Helmkey, Iva B., (Maths)
 Hill, Kenneth S., B.A.
 Hill, Mary A.
 Hind, Edith J., B.A. (Commercial)
 Henry, Esther A., B.A. (Art)
 Holley, Anna M.
 Hood, Annie I., B.A.
 Hooker, Ida A., B.A.
 Houze, Margaret. (Art)
 Howitt, Mary
 Ireland, Norval J., B.A.
 Irwin, Florence H., B.A. (Mods. & Hist.)
 Johnson, Guy E., M.A.
 Johnston, Mabel C., B.A. (Art)
 Johnston, Wm. B., B.A. (Phys. C.)
 Jones, Gwendolyn B., (Art)
 Keeling, Wilford Lorne, B.A. (Phys. C.)
 Kenyon, Grace, B.A., (Class.) (Eng. & Hist.)
 Kilgour, Hugh B., B.A.
 Knight, Florence I., B.A. (Phys. C.)
 Lewis, Marjorie B., B.A.
 Lewis, Roy E., B.A.
 Lindsay, Bertie L., (Commercial)
 MacDonald, Jessie H., B.A.
 MacLachlan, Isabella P., M.A.
 MacLaurin, Mary L., B.A. (Eng. & Hist.)
 MacNabb, Christina A. B.A.
 McAllister, Annie G., (Phys. Cult.)
 McCann, Dorothy.

Pearson, Florence E., B.A. (Phys. Cult.)	Wallace, Minnie G., B.A. (Phys. Cult.)
Pescod, Ethel M., (Agriculture)	Weegar, Ena D., (Agriculture)
Player, Winifred A., (Agriculture)	Williams, Grace E., B.A. (Phys. Cult.)
Quin, Mary M., (Household Science)	Wilson, Muriel K., (Art)
Rieger, Susan (Sr. M. Verena)	Woodcock, Mary S., (Phys. Cult.)
Robertson, Mary E., (Agriculture)	Woods, Annie E., (Agriculture)
Rogers, William C., M.A. (Phys. Cult.)	Wright, Edith G., (Agriculture)
Ross, Edith I., B.A. (Phys. Cult.)	Zavitz, Merrill S., (Agriculture)
Roszel John M., (Phys. Cult.)	

V. Permanent Supervisors' and Intermediate Certificates

Barlow, Frederick J., B.A. (Agric.)	Shorey, Percival M., B.A., B.Sc., (Agric. & Farm Mechanics)
Davies, Norman B.A. (Agriculture)	Short, John H., (Agriculture)
Hill, Harry (Vocal Music)	Sibley, Maude (Sr. M. F. Joseph) (Art)
Nicol, John L., (Vocal Music)	White, Nora K., (Art)

VI. Permanent First Class Certificates

Allison, Catherine.	Briggs, Joseph B.	Craig, Vera.
Ames, Vern N.	Brodie, Mary Richmond.	Craven, Henry.
Amos, Jessie Elizabeth	Brokenshire, Melville C. B. A.	Cringle, William Jack.
Annett, Tillie M.	Brooks, Edward Frank.	Currie, Burt.
Armstrong, Harry Everett.	Brown, Bessie.	Davidson, Agnes Marion.
Awde, Frances Ina.	Brown, Grace Josephine.	Darling, Elizabeth I.
Baird, Kathryne.	Brown, James Scott, B. A.	DeLaplante, Frances M.
Ball, Isabella Leslie.	Bruder, Ella M., (Sr. M. Teresa.)	Dodds, Irene I.
Barfoot, Mary E.	Carriere, Samuel W.	Donohue, Helen Jane.
Barlow, Hilda M.	Cassels, Alice Sutherland.	Duffett, Margaret E. W.
Barnby, Eunice J.	Chamberlin, Edith Merle.	Dunlop, Edna Eileen.
Beacom, Elmer C.	Chambers, Charles F.	Eagleson, Robert L.
Beatty, Albert Johnson.	Church, Clara A.	Elmot, Marion Belle.
Belfry, Elsie Florence.	Cole, Mary Evelyn R.	Fair, Clara Elizabeth.
Bennington, Evelyn Maude.	Colhoun, Annie I.	Fallis, Clare Raymond.
Benson, Gena M.	Colling, Leslie Joseph.	Fenton, Hazel Sara.
Benson, Harold J.	Collins, Marie Johanna.	Fordyce, Stuart.
Betts, Marion Isobel.	Connell, Constance L.	Fowler, Charles Alfred.
Bishop, May.	Cooper, Zilpah May.	Francis, Garnet Clinton.
Bolton, Robert Judson.	Corlett, Etta Mabel.	Freeman, Blanche Winnifred.
Booker, Frances Mary.	Coulson, Robert W.	Fuller, Mary Helen R.
Bovair, Evelyn D.	Coulter, Gladys Irene.	Garvin, Mary Kathleen.
Bowie, Bessie M.	Coventry, Jean M.	Garbin, Errol Manley.
Brewer, Mildred E.		Girven, Margaret May, B. A.

VI. Permanent First Class Certificates (Continued)

Glen, Edna E.	McGrath, Elizabeth B.	Roe, Laura Jean.
Goldblatt, Ray.	McIntyre, Archibald Fleming.	Ross, Pearl.
Gowdy, Douglas M.	McKechnie, Mary E.	Roszel, Jessie Mabel.
Gray, Reta Georgina.	McKinnon, Archie Lynn.	Rose, Alta Irene.
Green, Myrtle E.	McLaren, Minnie Edith.	Scott, Mary M. Jean.
Gregg, Hazel V.	McMackon, Laura F.	Sauve, Dora M.
Greenan, Helen Mary, (Sr. M. Helen.)	McMullen, Mabel, B. A.	Scott, Orpha Muriel.
Hanes, Marion Elizabeth	McNabb, Elinor M.	Semple, Gertrude M.
Harvey, Florence B.	McTaggart, Archibald N.	Settingington, Una Odell.
Hayes, Edith Thelma.	Meek, Harriet Agnes.	Shantz, Marie.
Henderson, Beatrice Fern.	Meldrum, Florence C.	Skuce, Emma Vera L.
Hibbard, Olive Lovila.	Melick, Anna.	Smith, Florence Mydra.
Hicks, Olive M.	Michener, Jessie M.	Smith, Helen K.
Hopgood, Grace.	Middleton, Jean.	Smyth, Eleanor Kathleen.
Howard, William Richard, B. A.	Middleton, Maude.	Snell, Blanche E.
Howell, Fannie I.	Mills, Electa M.	Sprague, Lottie S.
Hughes, Thomas John, B. A.	Moloney, Teresa.	Stalker, Cecil M.
Humphries, Gladys Estelle.	Montgomery, John E.	Steele, Jeanne Muriel.
Jackson, May B.	Moorhouse, Edna L.	Steele, Lillian Olive.
James, Edna.	Moote, Dorothy Myrtle.	Stevens, Vernon S., B. A.
Jerrom, Winnifred M.	Morris, Clive M.	Stewart, Janet Ina.
Kearney, Winnifred A.	Muirhead, Sarah B.	Stitt, Ruby Irene.
Kerr, Jessie I.	Mummery, Rita E.	Strader, Vera A.
Kingston, Errol Frederick.	Munro, Peter Fraser.	Stuart, Janetta H.
Kirk, Nina May.	Nephew, Ruth Marion.	Summerby, Margaret Golding.
Lally, Edward B.	Nolan, Anastasia, (Sr. M. Alexis).	Sutherland, Jessie Margaret.
Landry, Rena M.	Nolan, Mary Eva.	Taylor, Neil A.
Langdon, Ralph.	Nott, Mary Alice.	Tennison, Bertha Ella.
LaPiere, Marie E.	O'Connor, Camilla M.	Thompson, Annie M.
Leavitt, Irene.	Oliver, William Lyle.	Todd, Hazel Adams.
MacDermid, Edith E.	Orchard, Norma A. F.	Tryon, Margaret J.
MacFarlane, Eleanor Margaret.	Ostrander, William A.	Turnbull, Ella Wanless.
MacKay, Laura A.	Parsons, Edith Priscilla.	Turner, Ethel Josephine.
MacKenzie, Mattie H.	Paterson, Reginald Ellis.	Turner, Helen M.
MacLachlan, Helen.	Peck, Myrtle Winnifred.	Usher, Zella G.
MacLennan, Bessie.	Penfold, Bessie G.	Walker, Mary H.
Mahoney, Helen Leadot.	Pettypiece, Francis G. L.	Watson, Mary Elizabeth.
Manders, Charles.	Philpot, Electa Viola.	Watts, Aleta L.
Mansz, Thusnelda M.	Pollock, Elizabeth Jean	Weatherill, Mae.
Mark, Jetta Marie.	Pretty, Elsie I.	Webster, Cecile Sidney.
Martin, Allan Alexander.	Quinlan, Lucie Helen.	Wells, Mary Jessie E.
McCarty, Myrtle Irene.	Radford, Alicia A.	Welsh, Royal Stanley.
McCullough, Mary, (Sr. M. Nativity.)	Ramsden, Francis Cleve.	Wesley, Caroline.
McGee, Marjorie E.	Reid, Emmett C.	Westbrook, Daisy.
	Reinke, Edna Edith.	Western, Blanche Almeda..
	Richardson, Jennie.	White, Mary Emily.
	Ridley, Marion Isabel.	Wiles, Helen E.
		Wood, Helen Louise.

VII. Permanent Second Class Certificates

Abar, Edith M.	Allen, Margaret E.	Argall, Mary Gertrude.
Abey, Harriet Catherine.	Ambler, Mary Elsie.	Arksey, Sylbia Hilda.
Acheson, Hazel Irene.	Anderson, Alice B.	Armstrong, Christina Ruth.
Acheson, Myrtle Margaret.	Anderson, Bessie.	Armstrong, Hazel V.
Acton, Verna E.	Anderson, Eva Grace.	Armstrong, Lavina, (Sr. M. St. Gregory.)
Adams, Beatrice F.	Anderson, Helen L.	Armstrong, Mary Agnes.
Adams, Grace Lavina.	Anderson, Jean Helen.	Arnold, Clara.
Agar, Eva Willard.	Anderson, Marguerite Mary.	Arnold, Ella A.
Agnew, Della Elizabeth.	Anderson, Mary L.	Arnold, Rachel Aretta.
Aitken, Margaret.	Anderson, Norma McKellar.	Ashton, Mary Edith.
Aldrich, Bertha Mae.	Anderson, Pearl Margaret.	Atchison, Lucy Irene (Mrs.)
Allan, Louise B.	Andrews, Carrie E.	Atkinson, Annie Verine.
Alcock, Edna.	Anglin, Mildred Priscilla	Auger, Elizabeth Florence.
Allen, Freda Pearl.	Archer, Edith Helen.	Ault, Orville E.
Allen, Irene Jane.	Ardill, Marion Sibyl.	

VII. Permanent Second Class Certificates (Continued)

Avery, Olive Marie.
 Babb, Hattie Evelyn.
 Baechler, Mary C.
 Balgent, Sarah Lydia.
 Bailey, Florence L.
 Bailey, Florence Velma.
 Baird, Mary Catherine.
 Bairns, Eva H.
 Baker, Annie Laurie.
 Baker, Helen May.
 Baker, Winnifred M.
 Baldwin, Helen Alberta.
 Ball, Laurine.
 Ballantyne, Jennie.
 Bannister, Mary.
 Banting, Marguerite E. M.
 Barrett, Hazel I.
 Barricks, Basil Eugene.
 Bartlett, Vera Jemima.
 Bass, Norma Isabel.
 Bathurst, Sara A.
 Battin, John D.
 Bawden, Maude E.
 Baxter, Isabel Christina.
 Bayeroft, Mabel Annie.
 Bayles, Gladys M.
 Beattie, M. Damaris.
 Bedford, Mary Dorothy.
 Bell, Anna M.
 Bell, Hilda E.
 Bell, Jennie E.
 Bell, Marion Margaret.
 Bell, Myrtle Viola.
 Benham, L. May. (Mrs.)
 Berry, Vera Marie.
 Best, Gertrude Mary.
 Bilyea, Olive S.
 Binning, Shirley J.
 Black, Agnes B.
 Black, Laverne Olive.
 Blair, Alice M.
 Blair, Grace Jean.
 Blair, Margaret Edith.
 Bock, Alice C.
 Bogie, Jean Shannon.
 Boinofski, Lulu. (Sr. M. Macarius.)
 Bolin, Margaret Mary.
 Booth, Gladys R.
 Bouch, Louise E.
 Boudreau, Maurice Eugene R.
 Bourne, Mary Irene.
 Boyd, Gordon A.
 Boyes, Violet Jane.
 Boyle, Annie Alma G.
 Boyle, Christena S.
 Bradley, Florence V.
 Bradley, Violet Elizabeth.
 Brady, (Mrs.) Wilhellmina Annie.
 Bragg, Ruby Myrta Pearl.
 Brandt, May.
 Brien, Gertrude Marie.
 Brioux, Mary A., (Sr. M. Armene.)
 Brown, Albert Fleming.
 Brown, Beatrice I.
 Brown, Ila I.
 Brown, Jessie.
 Brown, Katharine A.
 Brown Margaret C.
 Brown, Mary R.
 Bruce, Kathleen.
 Brumwell, Edith E.
 Brunt, Thelma M.
 Bryan, Marjorie Helena.
 Bryce, Christina.
 Buchan, Marjorie Hanna.
 Buchley, Millie C. (Amelia.)
 Buckham, Violet Rosena.
 Bumstead, Edna Maude.
 Bumstead, Mildred E.
 Burgess, Lillian Doris.
 Burns, Helen Aleda.
 Burns, Helena Isabel.
 Burns, Irene Margaret.
 Burns, Mary W.
 Burrill, Edith I.
 Burse, Georgia Mabel A.
 Burtch, Vera M.
 Busby, Ella Muriel.
 Butchart, Edna S.
 Puttrum, Frances Isabella.
 Byam, Ruby Alma.
 Byrne, Ellen Matilda. (Sr. Mary Bernice.)
 Cain, Helena A.
 Calbeck, Olive Carmen.
 Calder, Marion M.
 Calder, Rhena E.
 Calder, William Alexander.
 Caldwell, Amy E.
 Cameron, Christena M.
 Cameron, Margaret.
 Cameron, Stanley George.
 Campbell, Agnes Frances McQueen.
 Campbell, Audrey A.
 Campbell, Ian Gilchrist.
 Campbell, Isabel F.
 Campbell, Muriel Jean.
 Campbell, Rhena G.
 Campbell, Rose Myrtle.
 Campbell, Winnifred A.
 Canning, Richard Reginald.
 Cannon, Ernel Frances.
 Caraher, A. Beatrice, (Sr. M. Inez.)
 Carbert, Veronica B.
 Card, Nellie Maude.
 Carl, Martha L.
 Carl, Ruby Irene.
 Carpenter, Mary S.
 Carr, James Bremner.
 Carrol, Lydia M.
 Carron, Emma L.
 Carrothers, Kathleen.
 Carruthers, Ina B.
 Carswell, Velyian P.
 Carter, Jennie Grierson.
 Carter, Lyla Mercedes.
 Cassie, Roy C.
 Caswell, Edna Kathleen.
 Caswell, Ruby Irene.
 Causley, Gladys Lillian.
 Chalmers, Jessie W.
 Chalmers, Mabel J.
 Chamney, Annie Clarke.
 Chapman, Beulah L.
 Chapman, Esther Marion.
 Charlton, Gladys S.
 Charteris, Carolyn.
 Charteris, Elizabeth.
 Chatland, Olive.
 Childs, Ella B.
 Chinnick, Hazel May.
 Chwoen, Elizabeth D.
 Church, Clara Louise.
 Churchill, Amy M.
 Clancy, Marguerite.
 Clapham, Shirley Mercedes.
 Clayton, Norma Mae.
 Cleary, Mary Irene.
 Clifford, Elizabeth.
 Clouse, Myrtle Leone.
 Coatsworth, Augusta.
 Cochrane, Emma Catherine.
 Cockburn, Beatrice Margaret.
 Coffey, Blanche Thelma.
 Coffey, Mary A.
 Coghlan, Mary Lilas.
 Collins, Catharine Irene.
 Collins, Edith A.
 Collins, Elsie Margaret.
 Condon, Lillian Joanna.
 Conlin, Mary E.
 Connell, Leta A.
 Connor, Edna M.
 Conway, Elizabeth K.
 Cook, Beatrice Victoria.
 Cook, Mildred Elizabeth.
 Coon, Edna Georgina.
 Cooper, Gladys Mary.
 Cooper, Ruth Lillian.
 Cornell, Gladys M. (Mrs.)
 Costley, Gladys.
 Coulties, Lena M.
 Coulthart, Laura M.
 Coulton, Mary E.
 Couper, Isabel.
 Cousins, Archie R.
 Coutts, Agnes Strathdee.
 Cozens, Elsie D.
 Craig, Elsa I.
 Craig, Marjorie Little.
 Craig, Sara Bernice.
 Cramp, Ida M.
 Crate, Florence.
 Craven, Beatrice Marie.
 Creech, Mary Ellen.
 Crich, Mary Gertrude.
 Cronyn, Eileen M., (Sr. M. Eileen.)

VII. Permanent Second Class Certificates (Continued)

Crooks, Elsie Beatrice.	Eaton, Eva Rebecca.	Gamble, H. Joy.
Crookshanks, Grace Lillian.	Eby, Inez M.	Gardiner, Bessie.
Crosby, Marion E. Blanche.	Edwards, Ferne V.	Gardiner, Euphemia A.
Crowe, Edna Annie.	Elford, Mabel Marie.	Garland, Julie Anna.
Crozier, Ida Mae.	Elliott, Bessie Nichol.	Garrett, Charlotte Isabella.
Cruikshank, Ishbel J.	Elliott, Edna R.	Gaslin, Ruth M.
Cull, Claro, (Sr. M. Afra.)	Elliott, Ella Kathleen.	Gastle, Margaret Winnifred
Cumming, Elizabeth M.	Elliott, Elsie.	Gawley, Annie Blanche.
Cunningham, Hazel.	Elliott, Lula E. E.	Geddes, Norman M.
Curry, Alice Louise.	Elliott, Ruby A.	Gemmill, Muriel Elizabeth.
Curtis, Lulu May.	Ellis, Jennie Brewster.	Gibson, Gertrude Marguerite
Cutt, Ione.	Ellis, Vera P.	Gibson, Margaret Cook.
Davey, Mary.	Ellsworth, Evelyn Gertrude	Gibson, Ruth O.
Davidovitz, Matilda.	Elward, Helen Margaret.	Gilbert, Ethel.
Davidson, Belle.	English, Nettie Pearl.	Gill, Jennie M.
Davidson, Grace Jean.	Evans, Jean.	Gillies, Rachel Arvella.
Davidson, Mamie Evelyn.	Evans, Verlie May.	Gillies, Sarah Lillie.
Davidson, Nellie Irene.	Facey, Margaret Jane.	Gilmour, Ruth Aurelia.
Dawson, Maude.	Fagan, Sarah Z.	Givens, Marguerite Jean.
Deacon, Florence Fiona.	Fahey, Marie C.	Glaves, Cecil R.
Dean, Ethel Velma.	Fahrner, Martha Lillian.	Gleeson, Mary H.
Denning, Annie Mord.	Falkner, Rhoda P.	Glenney, Marguerite.
Dennis, Flora Cathrine.	Fargey, Marion I.	Godkin, Hester M.
Derby, Stella F.	Fargey, Marjorie Ellen.	Goodwill, Violet.
Devereaux, Louise Mary.	Farr, Jessie Evelyn.	Gordon, Jessie.
Dewar, James Alexander.	Fawcett, Verne Clifford.	Gordon, Olive Marion, (Mrs.)
Dickey, Florence A.	Feargue, Hazel.	Gott, Leila Berdina.
Dickey, Marion Elizabeth.	Fearman, Bessie.	Gourley, Lillian J.
Dickie, Matilda.	Featherston, Gladys Luella M	Graef, Anna Keith.
Dillon, Beatrice M.	Feir, Ruby May.	Graham, Cora M.
Dinsmore, Margaret Beatrice	Ferguson, Dorothy Isabel.	Graham, Velma F.
Dixon, Edna J.	Ferguson, Keitha.	Grainger, Ella Jewel.
Dockrill, Leila May.	Ferris, Marjorie.	Grant, Nellie Ward.
Dodds, Helen Margaret.	Ficht, Gladys C.	Greenwood, John Wilfred.
Doherty, Nellie M.	Finch, Burt A.	Greer, Mary Laverne.
Doig, Ellen S.	Finch, Olive Jean.	Grosskurth, Maude W.
Dolan, Evelyn M.	Findlay, Mabel Eliza.	Guest, Dora Evelyn.
Donaghy, Thelma M.	Flitchett, Gretta.	Guest, Laura Myrtle.
Donaldson, Mildred Elizabeth	Fligg, Marion Roberts.	Haffey, Vera Mary.
Donovan, Bernice.	Floyd, Gertrude Mills.	Hall, Anna Elaine.
Dool, Lillian Ida Bertha.	Floyd, Jessie A.	Hall, Annie Martin.
Dore, Alice Eileen.	Forestell, Matilda M.	Hall, Wilma Jane.
Doucette, Sadie.	Forrest, Margaret Elizabeth.	Hallett, Mabel Audrey.
Douglas, Catherine A.	Forsyth, Viola.	Halliday, Elizabeth B.
Douglas, Margaret Helen	Foster, Irene M.	Halloran, Catharine Mary.
Gladys.	Foster, Martha Hughena.	Halls, Merna H.
Dougherty, Hilda Irene.	Foster, Nellie Esther E.	Halpenny, Estella S.
Downey, Bernadette, (Sr. M.	(Mrs.)	Hambly, Ruth Mildred.
Gabriella.)	Fox, Marjorie Thelma.	Hamill, Olive Ethel.
Downie, Mary Gladys.	Francis, Edith Ellen.	Hamilton, Gladys V.
Dowsett, Hazel M.	Franklin, Beatrice Frances.	Hamilton, Lottie.
Draper, Winnie Hazel.	Fraser, Barbara.	Hamilton, Mildred Isobel.
Drehmer, Vera May.	French, Irene Eleanor.	Hammett, Elizabeth Lillian.
Drohan, Hannah E.	French, Lotus Henderson,	Hammett, Mary L.
Dufton, Hilda G.	(Mrs.)	Hammond, Alma Margaret.
Dunbar, Kathleen Mary.	Fritz, Erna Beatrice.	Hanbidge, Estella.
Dunbar, Ruby Katherine.	Furlong, Ella C.	Hanmer, Olive May.
Duncan, Agnes.	Furlong, Irene E.	Hansley, Harriet.
Duncan, Lelia T.	Fursman, Nellie L.	Hardwicke, Mary Elizabeth.
Dundass, Anne Gray.	Gadke, Violet.	Harrington, Helen.
Dunn, Nellie Beatrice.	Gagnon, Gladys E.	Harrington, Mary Agatha.
Durrell, Mary L.	Galbraith, Charlotte.	Harrison, Ella Marie.
Durie, Etta F.	Gallagher, Edna.	Harrison, Gladys A.
Dyer, Beatrice M.	Gallagher, Margaret Elizabeth	Harrison, Marjorie M.
Earl, May Eliza.	Gallagher, Mary M.	Hart, Grizzell R.
Eastwood, Mary Aileen.	Galley, Teresa, (Sr. M. Avila.)	Hart, Loretta, (Sr. M. St.
		Jerome.)

VII. Permanent Second Class Certificates (Continued)

Hartwell, Hazel Irene.	Johnson, Viola Regina.	Lawson, Myrtle Evelyn.
Harvey, Constance Isabel.	Johnston, Elsie C.	Lawton, Marjorie Evangeline.
Harvey, Florence Beatrice.	Johnston, Florence E.	Leahy, Grace M., (Sr. Mary Mercedes.)
Hattle, Florence C.	Johnston, Robert Alexander	LeCappelain, Ida S.
Hay, Georgina M.	Johnston, Winnifred Beatrice	Lee, Vida Muriel.
Hayhurst, Jean Heywood.	Johnstone, Irene.	Leeder, Cecelia E.
Heffernan, Marie K.	Jones, Elsie Catherine	Leitch, Bertha Victoria.
Helm, Julia Elizabeth.	Florence.	Leitch, Elizabeth.
Hemphill, Christina.	Jones, Florence.	Lemay, Gertrude A., (Mrs.)
Henderson, Zetta Mila Anne	Jones, Mamie Margaret.	Lemon, Margaret K.
Henry, Maude Adeline.	Jordan, Mabel Irene Isabella	Lickley, Helen Agnes.
Herold, Hilda E.	Judd, Esther Lindsay, (Mrs.)	Liddle, Muriel Irene, (Mrs.)
Heston, Mildred F.	Kalbfleisch, Katharine C.	Lidkea, Meron Alice.
Hetherington, Mary.	Kannawin, Clara.	Lind, Mabel A.
Hetherington, Mary E.	Kayler, Mildred Bernice.	Linton, Grace Maud.
Hewitt, Georgia Clare.	Keachie, Margaret Erma E.	Lockhart, Anna Marie.
Hewitt, Thomas C.	Keane, James A.	Lockhart, Mildred Louisa.
Hicks, Katherine Maude.	Kearney, Marie Antoinette.	Lockridge, Frances L.
Hill, Marguerite Grace.	Kearns, Mabel.	Lomas, Florence Joscelyn.
Hill, Marie Lillian.	Keays, Laura E.	Long, Annie Muriel Elizabeth
Hilliker, Ruby May.	Kee, Mary Florence.	Long, Edythe R.
Hodgkinson, Lily Rose.	Keetch, Norma V.	Loth, Erma.

APPENDIX V

PROVINCIAL NORMAL AND MODEL SCHOOLS

I. Normal School, Hamilton

Staff, January, 1922.

F. F. Macpherson, B.A.....	Principal: Literature, Reading, Spelling and French.
E. T. Seaton, B.A., B.Pæd.....	Master: Mathematics and School Management.
G. O. McMillan, M.A., B.Pæd.....	Master: Science, Nature Study and Agriculture.
Harold E. Amoss, B.A., D.Pæd.....	Master: Science of Education and Geography.
H. G. Lockett, M.A.....	Master: Composition, Grammar, History and Latin.
A. J. Painter.....	Instructor: Manual Training.
Julien R. Seavey.....	Instructor: Art.
Miss Clara E. Elliott.....	Instructor: Household Economics and Hygiene.
H. A. Stares, Mus. Bac.....	Instructor: Music.
A. J. Park.....	Instructor: Writing.
Miss Beatrice Allan.....	Librarian.

Students Admitted, Session 1921-22

Male.....(I Class, 13; II Class, 12).....	25
Female.....(I Class, 17; II Class, 154).....	171
Total.....	196

II. Normal School, London

Staff, January, 1922.

John Dearness, M.A.....	Principal: School Management and Science.
A. Stevenson, B.A., B.Pæd.....	Master: Science of Education and Literature.
E. T. White, B.A., B.Pæd.....	Master: Mathematics.
G. W. Hofferd, M.A., B.Pæd.....	Master: Science and Geography.
T. E. Clarke, B.A., B.Pæd.....	Master: English.
J. G. McEachren, B.A., B.Pæd.....	Master: History.
Sugden Pickles.....	Instructor: Manual Training.
S. K. Davidson.....	Instructor: Art.
Miss A. B. Neville.....	Instructor: Household Economics.
C. E. Percy.....	Instructor: Music.
Albert Slatter.....	Instructor: Physical Culture.
J. W. Westervelt.....	Instructor: Writing.
Miss J. Gahan.....	Librarian.

Students admitted, Session, 1921-1922

Male.....(I Class, 13; II Class, 20).....	33
Female.....(I Class, 32; II Class, 169).....	201
Total.....	234

III. Normal School, North Bay

Staff, January, 1922.

A. C. Casselman.....	Principal: History, Reading and Geography.
J. C. Norris, M.A., B.Pæd.....	Master: Mathematics, School Management, and Science of Education.
J. A. Bannister, B.A.....	Master: Composition, Grammar, and Literature.
H. E. Ricker, M.A.....	Master: Science, Nature Study and Agriculture.
J. F. Chambers.....	Instructor: Manual Training and Writing.
C. Ramsay.....	Instructor: Art.
Miss Mayme C. Kay.....	Instructor: Household Economics.
Herbert Wildgust, L.L.C.M.....	Instructor: Music.

Students admitted, Session, 1921-1922

Male	14
Female	123
Total.....	137

IV. Normal School, Ottawa

1. Staff, January, 1922

J. F. White, LL.D.	Principal : School Management and English.
S. J. Keys, B.A., D.Pæd.	Master : Science of Education and English.
J. D. Campbell, B.A.	Master : Mathematics and History.
G. A. Miller, M.A., B.Pæd.	Master : Science and Nature Study.
F. A. Jones, M.A., D.Pæd.	Master : Geography and Composition.
H. W. Kerfoot, B.A.	Master : Classics, Grammar and Literature.
J. S. Harterre.	Instructor : Manual Training.
Roy F. Fleming.	Instructor : Art.
Miss C. E. Green.	Instructor : Household Economics.
Miss L. Monaghan.	Instructor : Household Economics.
T. A. Brown.	Instructor : Music.
C. Emery.	Instructor : Physical Culture.
J. M. Fleury	Instructor : Moderns to I Class students.
C. J. Logan.	Instructor : Writing.
E. Laura Argue, B.A.	Librarian.

Students admitted, Session, 1921-1922

Male	(I Class, 0 ; II Class, 27)	27
Female	(I Class, 16 ; II Class, 190)	206
Total		233

2. Staff of Normal Model School, Ottawa, January, 1922

C. E. Mark, B.A., D.Pæd.	Headmaster, V Form, Boys and Girls.
H. M. Leppard, B.A.	IV Form, Boys, Sr.
A. W. McGuire, B.A.	IV Form, Boys, Jr.
W. J. McKendry, B.A.	III Form, Boys.
Miss Rose Lynch	II Form, Boys.
Miss Elsie Sherin	I Form, Boys.
Miss A. G. Hanahoe	IV Form, Girls.
Miss E. Cluff, B.A.	III Form, Girls.
Miss A. M. Delaney	II Form, Girls.
Miss M. R. Elliott	I Form, Girls.
Miss Lillas M. Henderson	Kindergarten-Primary.
Miss A. H. Baker	Kindergarten Directress.
Miss Gladys McClenaghan	Kindergarten Assistant.
J. S. Harterre.	Instructor : Manual Training.
Roy F. Fleming.	Instructor : Art.
Miss L. Monaghan.	Instructor : Household Economics.
T. A. Brown.	Instructor : Music.
C. Emery.	Instructor : Physical Culture.
J. M. Fleury	Instructor : French.

Number of pupils, 1921	365
Number of Kindergarten pupils, 1921	42
Total	407

V. Normal School, Peterborough

Staff, January, 1922.

Duncan Walker, B.A.	Principal : Mathematics and School Management.
Henry G. Park, B.A., D.Pæd.	Master : Science of Education and English.
Adrian Macdonald, M.A.	Master : English.
Alonzo J. Madill, B.A.	Master : Science and Agriculture.
Elmer E. Ingall, B.A.	Master : History and Geography.
A. F. Hagerman	Instructor : Manual Training.
Miss Jessie C. McRae	Instructor : Art.
Miss Elizabeth MacVannel	Instructor : Household Economics.

Miss Marion R. Rannie.....Instructor : Music and Physical Culture.
 John A. McKone.....Instructor : Writing.
 Miss Effie M. Munro.....Librarian.

Students admitted, Session, 1921-1922	
Male	19
Female	135
	154
Total	154

VI. Normal School, Stratford

Staff, January, 1922.

S. Silcox, B.A., D.Pæd.....Principal : Science of Education, and Spelling.
 J. W. Emery, B.A., D.Pæd.....Master : Science, Nature Study and Agriculture.

APPENDIX X

LIST OF ASSOCIATE EXAMINERS AND CONTINUATION AND HIGH SCHOOL PRINCIPALS AND ASSISTANTS

1. Associate Examiners, 1921.

Model Entrance, Lower School, Senior High School Entrance and Senior Public School Graduation Diploma

Agriculture: W. A. Porter, A. M. Woodley.

Algebra and Geometry: F. C. Asbury, D. R. Fletcher.

Arithmetic: A. H. S. Adams, W. A. Adams, Edna M. Boyle, L. H. Clarke, M. L. Cornell, L. K. Devitt, J. Elliott, A. J. Foerster, R. B. Goring, E. D. Hendry, J. T. Jenkins, W. J. Lamb, Margaret D. McDonald, R. N. McKenzie, E. D. Manning, Katie B. O'Connor, W. S. Steele, F. Tanton, J. F. West.

Art: Vivian E. Clayton, Ethel L. Fothergill, A. Edith Giles, Hanna M. Goulding, Gwendolyn B. Jones, Eva F. MacKenzie, Sara M. McBride, Jessie A. McKillop, Tena Martyn, Mabel Money, Christina B. Nichol, Ida E. Norton, S. W. Perry, Elsie M. Rice, Mae H. Ryan, Margaret Sinclair, Eva M. Somerville, Olive Tierney.

Bookkeeping and Writing: Ruth B. Heather, J. A. Ramsay, Margaret Tuer, D. M. Walker.

Composition: Mabel C. Johnston.

Geography: Edith Adams, Mary Bell, Clara Broughton, C. A. Bryan, H. J. Case, Emelyn E. Delmage, H. C. Dore, H. A. Doupe, G. E. Ellis, W. A. Evans, C. M. Ewing, H. G. Feasby, W. H. Fletcher, Mary M. Gordon, Luella Grainger, H. W. Hall, O. J. Henderson, S. H. Henry, A. Hisey, Margaret Holmes, Katherine M. Jackson, Alice C. Kelso, L. H. Kirby, Gladys R. Kirk, J. H. S. Leuty, Bertha M. Ranson, L. M. Richardson, J. M. Roszel, L. J. Stapleton, Ethyle M. Stark, L. Stevenson, E. H. G. Worden.

English Grammar: J. M. Adams, Mabel Allen, Lily M. Bell, Hattie L. Chown, W. F. Darroch, Mabel C. Edwards, Ruth W. Haines, Mary A. Hill, Harriett Ingham, Jessie Keagey, Jessie S. Kilpatrick, Eva W. King, Evelyn McDonald, Annie K. McGregor, Janet McLoehlin, Pearl McPherson, Blanche Mitchell, Lillian G. Mitchell, Susan P. Morgan, Winnifred Morris, W. E. O'Brien, A. E. O'Neill, Mabel Roberts, Wilhelmina D. Rutherford, Annie J. Stewart, Muriel J. W. Wallace.

History: Anna F. Almas, F. M. Winnifred Bell, Josephine Chambers, Isabel Clement, Florence Corkery, Margaret M. Dawson, Muriel Duncan, A. H. Dunnett, Florence M. Ewing, Roberta Gilray, S. P. Griffin, L. S. Hart, Philippa A. V. Hickey, Evelyn Hicks, May B. Hiscock, J. B. Kaiser, W. L. Keeling, Sada MacIntyre, Emma L. Mackay, J. G. McEachern, Hazel McGibbon, Rose McQueen, Isabel C. Mitchell, Stella K. Mott, J. P. S. Nethercott, Evelyn M. Rutledge, Winona Stewart, Agnes C. Sweeney, Josie E. Switzer, Lillie A. Traver.

Literature: Maude Chalmers, Agnes I. Hamilton.

Elementary Science: D. Brown, G. A. Campbell, R. H. Carbert, C. S. Carter, Charles H. Danard, W. J. Dowkes, C. G. Dunlop, C. G. Fraser, E. H. Glenn, H. W. Graham, Una M. Harris, E. Meryl Hicks, K. S. Hill, J. S. Jackson, Guy E. Johnson, Anna Kennedy, Evelyn I. MacNaughton, Alice McCoig, Vivian C. McDonald, Mary McEachran, R. W. E. McFadden, E. G. Miller, Mary H. Rutherford, W. W. Smith, Bertha R. Stewart, J. Tanton, H. E. Thompson, H. S. White, L. J. White.

Household Science: Clara E. Elliott, Evelyn M. Everson, Frances P. Prichard, Mary P. Shaw.

Spelling: J. H. Adams, Leita E. Arnold, Gladys I. Brewster, A. A. Cameron, Mrs. Ethel Currie, Eugenie M. DeFoe, W. S. Ferguson, F. M. Hicks, Maggie Keough, Mrs. Jeanette MacGregor, Jennie McDowell, E. F. Milburn, H. L. Smith, E. M. H. Ward.

Writing: J. J. Bailey, A. F. Birchard, Charlotte Burk, Elvina M. Cummer, S. B. Hatch, Annie L. Hudson, C. E. Jamieson, Bertie L. Lindsay, Mary A. Moir, Lizzie Pirie, Mamie G. Quinn, Alice M. Tanner, Annie M. Tanner, C. M. Trace.

Middle School and Pass Matriculation Associate Examiners

Algebra: C. S. Allin, N. E. Challen, D. H. Coates, J. D. Dickson, A. W. Ferguson, T. M. Henry, H. G. S. Jeffrey, C. F. Lawrence, J. McKellar, A. F. McKillop, J. McQueen, A. H. D. Ross, W. G. Spencer, A. E. Thompson.

Art: A. R. Barton, F. Hood, S. W. Perry, L. Wheelton.

Chemistry: F. J. Barlow, E. M. Bigg, C. W. Butcher, R. D. P. Davidson, T. W. Elliott, J. Gilchrist, E. J. Halbert, J. A. Hamilton, E. H. Jolliffe, G. E. Kennedy, R. G. Lawlor, R. H. Leighton, F. McNabb, A. R. McRitchie, G. W. Morden, B. P. Overholt, T. Preston, G. E. Ramage, G. A. Robertson, W. H. Tuke, D. A. Welsh, A. Williams, J. S. Wilson, D. T. Wright.

Composition: Jessie M. Bell, W. N. Bell, Lillian M. Campbell, M. Ada Dickey, Lena Duffton, T. E. Elliott, W. E. Hanna, E. A. Hardy, Nora Lewis, G. L. MacDonald, Margaret C. McGregor, H. C. Mann, J. H. Mowat, Mabel Nesbitt, C. F. Price.

French Authors: Annie B. Brain, Evelyn E. Conlin, Elizabeth Dall, I. Goldstick, Ethel R. Guthrie, Mrs. Lulu M. Jamieson, Maybelle G. Kerr, D. MacKay, H. S. McKellar, Amy A. Newton, Claribel Platt, Margery E. Ross, Gertrude Ryan, Marion Wilkie.

French Composition: G. S. Bale, L. J. Clark, J. O. Clothier, J. Louise Galloway, Alexandra Howson, Mary W. Hubbs, Rachel L. L. Jones, C. A. Latour, Marie MacMinn, W. J. McAndrew, H. M. Magee, A. A. Norton, Kathleen T. O'Shaughnessy, Marion H. Rose, Agnes M. Stuart, W. H. Williams.

Geometry: Frances M. Ashall, Agnes Breen (Sr. M. Lucilla), A. D. Campbell, G. S. Campbell, Martha Fitch, G. W. Keith, Jennie A. Kinnear, H. C. Kinnee, J. H. Knowles, R. N. Merritt, E. G. Powell, C. W. Robb, Roberta M. Sillers, A. L. Stilwell, Susan A. VanAlstyne, R. Whyte.

German: Lydia A. Barr, Bertha C. Herington, Jessie Muir, J. D. Robins.

Ancient History: Agnes W. F. Balfour, W. J. C. Barrett, D. Breslove, C. J. Burns, Carrie L. Costin, Euphemia J. Cowan, W. J. Fenton, Grace A. Gillespie, F. Grace T. Hall, Mary A. Harris, J. I. Hutchison, William Kelly (Brother Francis), R. H. King, Ina H. McCauley, Alma Matthews, Annie B. Millar, Kathleen V. Moore, A. W. Morris, Janet Penfold, Mabel Powell, Ralph Ross, Minnie C. Runians, Myrtle H. Stevens, J. W. Treleaven.

British and Canadian History: G. N. Bramfitt, J. O. Carlisle, Jessie S. Cattanach, Viola J. Dobson, Mina B. Donnelley, J. J. Edwards, Kathleen B. Ferris, W. K. Foucar, Helen A. Franklin, W. A. Glass, Ethel E. M. Hammell, Edith P. Husband, A. Johnson, A. E. Judge, E. Blanche MacLeod, W. G. McNeill, Alice A. McRae, A. McVicar, S. A. Morrison, W. Mowbray, B. Teresa O'Reilly, L. J. Pettit, Frances M. Quinlan, J. F. VanEvery.

Latin Authors: R. T. Andrews, W. D. T. Atkinson, L. Brown, E. U. Dickenson, P. K. Hambly, H. J. Haviland, Hazel F. Hay, R. S. Jenkins, Katie B. Johnston, Lillie E. V. Lloyd, J. M. McKinley, G. B. McQuarrie, G. E. Mabee, Frances D. Morden, C. A. Shaver, Laura A. Smithson, W. J. S. Southcombe, J. N. Woodcock.

Latin Composition: F. H. Butcher, J. C. Clark, Marjorie Colbeck, Nora G. Dewar, A. W. Dunkley, Jessie E. Eckhardt, W. A. Graham, Alice E. Gregory, J. H. Hardy, W. D. Lowe, W. R. McCamus, C. McKinnon, C. A. Mayberry, Riddell, F. P.

Literature: Mabel M. J. Baird, Mary J. Bull, J. A. Cooke, Mary C. Edge, Grace Edwards, M. Erb, R. S. Foley, Jessie Foster, Christine Fraser, D. A. Gilchrist, L. C. A. Hodgins, A. J. Husband, Jessie Kennedy, Florence I. Knight, Isabella J. MacDougall, C. Lillie MacLennan, Jessie Maitland, Persie C. Meadows, Leonora Park, Mary K. Rodden, J. E. Skeele, Ruth Stewart, May M. Taylor, Janie Thomas, C. J. Thoms, Countess L. Twiss.

Physics: J. S. Bell, J. E. Burchell, J. G. Cameron, M. Cameron, G. A. Cline, Hannah Connors, (Sr. M. Carmelita) H. Davidson, W. M. Erwin, C. F. Ewers, W. B. Forbes, E. H. Greig, J. R. Hamilton, R. D. Keefe, C. A. K. Lehmann, A. C. Lewis, P. MacKichan, J. E. Marcellus, A. Pearson, Nellie M. Philip, W. R. Saunders, D. E. Smith, T. C. Smith, E. J. Wethey, R. H. Young.

Upper School and Honour Matriculation Associate Examiners

Classics: H. W. Bryan, Beatrice L. Fletcher, W. B. L. Howell, J. T. Lillie, F. H. Lingwood, F. J. A. Morris, Mrs. E. K. Urquhart, G. E. Will.

Composition: Minnie F. Libby, Ethel Seeley, Kate L. Stewart, E. H. A. Watson.

French and German: A. W. Baird, Janet Carter, Pearl B. Faint, Jessie Houston, H. W. Irwin, Agnes Mackintosh, Aileen Noonan, Marion I. Whyte.

History: J. A. Carlyle, P. T. Jernyn, Mary McCallum, Mary H. O'Donoghue, R. Stothers.
Literature: Margaret Clifford, W. Elmslie, W. N. Sexsmith, Isabel K. Smith, Grace M. Strang.

Mathematics: O. Asselstine, Edith R. Delmage, L. R. Halnan, W. P. Hedley, T. Kennedy, T. A. Kirkconnell, J. M. Lawr, G. V. Maclean, S. Martin.

Science (Physics, Chemistry, Mineralogy): C. C. Arthur, Annie A. Boyd, J. C. Doherty, Thomas Firth, T. H. Follick, L. H. Graham, W. J. Haydon, E. O. Leibner, H. S. Rosevear, F. D. Wallace.

Science (Botany and Zoology): J. F. Calvert, F. J. Johnston, B. E. Leckie, W. E. Shales, A. R. Walker.

II. List of Principals and Assistants of Continuation Schools, January, 1922

APPENDIX Y

ONTARIO SCHOOL FOR THE
BLIND

ANNUAL REPORT OF THE SUPERINTENDENT

To the HONOURABLE R. H. GRANT, M.P.P.,
Minister of Education for ONTARIO.

Sir,—I have the honour to transmit herewith the fiftieth Annual Report of the Ontario School for the Blind, Brantford, for the year ended 31st October, 1921.

I have the honour to be,

Sir,

Your obedient servant,

W. B. RACE,

Superintendent.

Brantford, December, 1921.

The Attendance

In presenting the fiftieth Annual Report of the Ontario School for the Blind, I beg to report the average attendance for the session which ended June, 1921, as 113, and an increase in the total registration for the school session commencing September 28th, 1921, from 106 to 119. The registration of pupils for the twelve months of the official year from October 31st, 1920, to October 31st, 1921, was 146, just ten more than in the preceding year.

There has been a marked increase in attendance this year at all schools throughout the Province and the School for the Blind proves to be no exception. The Canadian National Institute for the Blind co-operating in some places with the Canadian Red Cross Society and other organizations interested in the care of children, have done a splendid work in directing the attention of the public to the excellent advantages of our school.

Changes in Staff

Miss Jeannette Killmaster, owing to ill-health, was compelled to resign as Musical Director, very much to the regret of everybody associated with the school, as the work in her department had reached a very high degree of excellence. Miss Killmaster's position was filled by the appointment of Mr. J. G. Galloway, organist in the Brant Avenue Methodist Church of Brantford. Mr. Galloway is rated very highly as an organist and as a teacher of piano and vocal music.

Miss Summerby, High School Teacher, resigned owing to the illness of her mother, and has been succeeded by Miss Jean Burns of Brantford. Miss Burns is a graduate of Toronto University and comes to the school with a short experience in High School work.

Mr. Tindall, Boys' Supervisor, for one year, resigned to continue his studies, and his work in the school has been taken by Mr. John Pollock. Mr. Pollock is not without experience, as he occupied a similar position once before and has had much to do with boys' work. He is an expert swimmer and had been acting throughout the summer as life-saver for the City of Brantford.

Many of their old friends and schoolmates will regret to hear that since our last report both Miss Matura Cronk and Miss Catherine Burke have passed away. The former had been in ill-health for the last two years and her death came as a release from suffering on May 7th. Miss Burke's death occurred in March and she had only been away from the school for a few months.

Miss Winnie Davison, who had been acting as stenographer in the office of the Director of the Canadian National Institute for the Blind, Toronto, succeeded Miss Burke for a few months, returning at a later date to take another position in Toronto. The position is now filled by Miss Agnes MacGillivray, a graduate of last June.

New Pupils at the Opening of the Session, September 28th, 1921

Domestic Science

As intimated in my report of a year ago, the need of proper facilities for teaching Household Science was very apparent, as the poorly equipped room which has done service for many years has long been insufficient for the needs of this very important branch in girls' training. The appropriation granted for that purpose has enabled us to fit up and equip a large room with all the latest conveniences for teaching Domestic Science, and the girls feel grateful for the completeness of the accommodation now provided.

A large electric stove, in addition to several smaller stoves which stand upon separate tables enables the pupils to have all the advantages of individual training as well as demonstrations by the teacher in charge.

June Concert

As usual the June concert was quite up to, if not beyond the usual standard. At all events, the room was filled to capacity and many enjoyed the programme from the hallway outside where those who could not obtain an entrance stood throughout the entire programme.

The following is taken from the Brantford "Expositor" of June :

Those who had the privilege last evening of attending the commencement exercises of the Ontario School for the Blind, enjoyed a rare treat, and could not fail to be impressed with the varied and attractive programme that was presented. There were part songs, solos, piano solos, duets and quartettes, violin selections, recitations, wand drills and a beautiful tableau of spring. The entire programme was chaste and artistic, and splendidly rendered, and reflects great credit on the members of the staff.

The programme was varied from the succession of musical numbers by the introduction of an unusually pretty and well arranged dramatic piece called "A Spring Fantasy." There were 18 pupils taking part in this and they aroused the keenest interest among those watching them by the accuracy with which they remembered to

take their places and the general ability they showed in making the offering pretty and attractive. The little playlet was begun by a lament by old King Winter that his strength was all passing away, then his disappearance, and the arrival of Spring and all her attendants. King Winter was attended by little white snowflakes and Jack Frost, the snowflakes being chosen from the very smallest of the little girls, who carefully led each other on and off the stage, holding hands. Spring had her followers also, in dainty and bright flower costumes, and in dance and song and dialogue they told the story of the change of seasons. The whole production was very pretty and showed careful training on the part of the teachers, for some of those taking part were very small, yet their voices carried to all parts of the hall.

An interesting number was a recitation given by a very small lad, Ernest Philpott, who had a voice much "bigger" than his body, and he was distinctly heard in his selection, "David's Soliloquy." Donald Macalister was loudly applauded also in his selection, "The Cattle Thief," by Pauline Johnson, and a wand drill by seven boys was given with the precision of a small corps of drum majors.

The major part of the programme, however, was given over to musical numbers. This year at the school there are several young ladies who have given excellent promise of becoming widely known in their art, for they have inherent musical talent, and their teachers have given them very special attention. Several times during the year they have appeared on other platforms in the city and have been welcomed, and again last night they gave excellent account of themselves.

Miss Kathryn Sells has become familiar in every way with her piano, and with her own natural ability and careful study she has attained a high degree of perfection. She played last night Rachmaninoff's "Prelude in G Minor" that displayed her gifts very well, for she played it with confidence and finish. Miss Gladys Bickerton sang "Romanza" (Cavallerio Rusticana) and her fresh young voice was well displayed in her selection, when she took the high notes clearly and resoundingly and put a good deal of artistry into her lower tones. In her violin solo, "Reverie," by Vieuxtemps, Miss Greta Lammie gave a number that was a decided favorite with her audience and she was warmly applauded.

Very well given were the part songs by the girls' choral class and the two numbers of the boys and girls in one large chorus, with which the programme was opened and closed, "A Twilight Song" and "Now Tramp O'er Moss and Fell." A very sweet and pleasing number was a solo sung by Miss Agnes MacGillivray and the "Boat Song" by Miss Lillian Clark proved to be a very pretty selection. Several young ladies entertained the audience by their piano numbers, Miss Lillian Clark and Miss Kathryn Sells playing a piano duet, Miss Mary O'Neill pleasing with her piano solo, "On Song's Bright Pinions" and the piano quartet, Mozart's "Euryanthe" was very fine as played by Miss Mary O'Neill, Miss Agnes MacGillivray, Miss Alma Brunsdun and Aloysius Petrie. A number given by two violinists, a pianist and an organist was delightful, Miss Greta Lammie, Miss Jones, Miss Kathryn Sells and Aloysius Petrie taking part in this. The number of those who possess musical ability was further shown by the piano duet played by the Misses Mary Edwards and Aida de Carlonis, who both proved to be talented.

The whole entertainment was of a high order and Principal W. B. Race, who welcomed the visitors to the school and introduced the pupils, was justly proud of their work. The skill with which the pupils move about the stage still excites the interest and the curiosity of the audience, and Mr. Race is making it a special feature to instruct the boys and girls to make their way alone.

One of the most pleasant features of the programme was the presentation by Mr. W. B. Donkin, on behalf of the pupils, of a beautiful lamp to Rev. Mr. Martin, for his interest in coming to the school on more than one occasion to give them a dramatic recital.

Visitors

Mr. L. M. Wood, President of the Canadian National Institute for the Blind, was a welcome visitor at the time of the June concert. Mr. Wood in addressing the pupils referred to his interest in the adult blind at Toronto and expressed a keen appreciation of the work done in the school, not only in their education and work, parts of which he had witnessed, but also in the magnificent concert they had given.

Mr. Philip Layton and Mrs. Layton, of the Montreal School for the Blind, were also welcome visitors. They each spoke to the pupils, emphasizing the value of their training at school, and giving them much good advice.

New Walks

During the summer vacation many improvements were made in the grounds. New walks were built which enable the boys to reach their dormitory without entering the Main building, and trees which were obscuring the main building were cut down, much to the general improvement in appearance and with the additional advantage of affording more light to the rooms. Numbers of trees were cut down in the grounds and a large patch of willow which had been growing unchecked for several years was cut out altogether.

Concerts During the Vacation

Several of the girls undertook in various parts of the province to put on concerts during the summer months, and I am glad to report that they met with considerable success. These concerts educate the public to the high quality of the work being done, and serve as a good advertisement to the school, and also afford some return to the girls for the entertainment given.

INFORMATION FOR PARENTS

The following information regarding the aims and objects of the School will be of especial interest to parents who are considering sending their children :

Where It Is--What It Is--What It Does

The Ontario School for the Blind was established in 1872, and formally opened in May of that year. The site overlooks the valley of the Grand River, and includes one hundred acres of valuable land. The opportunities afforded to the pupils and other residents of the school for healthful recreation are more than usually ample. No school for the blind in either Great Britain or the United States will compare with this one in that regard. The school is greatly favoured, too, by being within the limits of the City of Brantford, one of the most enterprising in the Province. The city cars pass along St. Paul's Avenue at the entrance to our beautiful park, and radial lines pass on either side in the direction of Paris and Galt. The interest taken by the churches in the welfare of the pupils, the frequent intellectual and musical entertainments to which the latter have access, and the healthful, moral and social conditions generally, all act most favourably on the lives and characters of the young people thus brought in contact with them.

The school was founded for the purpose of imparting general education, as well as instruction in some professional or industrial art to all blind youths of both sexes, between the ages of seven and twenty-one, not being deficient in intellect, and free from disease or physical infirmity. It is not intended as an asylum for the aged or infirm, nor as a hospital for the treatment of disease; but in its design has reference only to the physical, mental and moral training of blind children.

It is required that all pupils sent to the school should be decently and comfortably clothed, and furnished with a sufficient change and variety of apparel to ensure cleanliness and comfort. A supply sufficient for the term must be furnished or guaranteed before the pupil can be admitted.

The regular session commences on the fourth Wednesday in September, and continues until the third Wednesday in June, at which time every pupil must be removed to his or her home or place of abode. Guides are provided where necessary at the beginning and the end of the school term to look after the safety of children when they are travelling, but parents wishing to have their children with them at the Christmas vacation are expected to make all arrangements for the journey, both going and coming, and to guarantee that they will not be exposed to any contagious disease.

No fee is charged for tuition or board, but parents must pay all travelling expenses to and from school.

Terms of Admission

The term "blind person" is liberally interpreted to mean those who, by reason of actual blindness or impaired or defective vision, are incapable of receiving instruction in the Public schools. As a matter of fact, about half the pupils have some perception of objects, and have come after trying unsuccessfully to wrestle with the ordinary work of a school for the seeing. In many cases pupils come whose eyesight is in a critical condition from the strain imposed upon it by endeavouring to keep up with seeing pupils.

Pupils are admitted between the ages of seven and twenty-one years, but the rule is flexible enough to be disregarded if in the opinion of the Principal an individual case warrants an exception being made. But pupils must be free from bodily infirmity or mental deficiency.

The Course of Instruction

The courses of study followed in the Ontario School for the Blind are exactly the same as in the Public Schools of the Province, with the single exception of art. Pupils enter, however, at such a variety of ages that our system must be flexible enough to adapt itself to circumstances. Those who have had a previous training in the first grades of the Public School are given a test and placed in the class for which they are best fitted. But the child of seven or eight years who is attending school for the first time will receive his first lessons in the Kindergarten class, where he will learn all the little handy arts taught in the public Kindergarten schools, such as weaving, sewing, plaiting, and modelling familiar objects in clay. Here he gets his first ideas of music in the Kindergarten songs. Then his physical powers are developed systematically by exercises in a well-warmed and well-ventilated gymnasium. He will devote a short time daily to learning arithmetic, in its elementary stages, and also be taught to read. Arithmetic is rendered easy by use of blocks or other objects, and the alphabet is mastered by the aid of embossed cards. In this way a clever child will, at the end of a session, surprise his friends by the progress, in reading by the touch small words or even sentences, he has made.

As the pupil progresses he will take up new subjects of study in each class. Among these geography, taught by the aid of raised sectional maps, will be one of the most interesting. On these maps our own Province, with its counties, lakes, rivers, railways, cities, towns, etc., is carefully studied. The Dominion, with all its political divisions and geographical features, is mastered. Great Britain, with its commercial centres and other characteristics, is made perfectly familiar to the young pupils; while the United States and the Continents of Europe, Asia, Africa

and America, are all handled in turn on the same principle. That geography can be most successfully taught objectively is admitted. Many are the envious looks cast by public school teachers at our maps.

Natural history is taught with the aid of stuffed birds, animals, reptiles and fishes. The laws of hygiene are thoroughly impressed upon the minds of the pupils, which naturally tends to the development and maintenance of a robust and vigorous physical condition.

Blind pupils will, in all essential particulars, hold their own with the highest class in the public schools, while it is probable that they will really have a more complete acquaintance with certain subjects than their seeing competitors, and if a student has higher literary aspirations with a distinctively practical object, he can prepare himself here by fully qualified teachers for University Matriculation.

Music

There is a mistaken impression that the blind are gifted with musical talents to a greater extent than the average of seeing persons. But, as a matter of fact, there is nothing in blindness to quicken musical perceptions. Music is, however, a study particularly adapted to the blind, provided that the pupil has an ear that may be trained, and a musical sense that may be developed and cultivated. Remarkable results are attained, too, from the concentration of the mind on the study, which is easier to a blind person than to a seeing one. Every pupil in the school who can be taught music to reasonable advantage has the opportunity. But to expect us to make an accomplished musician out of a pupil merely because he is blind is absurd. Pupils of our school have passed very creditably the difficult examinations of the Toronto Conservatory of Music and the University of Toronto. Many are reaping the reward, as organists and music teachers, of the instruction they received at our school. That instruction includes the pipe organ, piano, theory, violin, and vocal music, and where the accomplishment is not complete enough to enable the pupil to follow it as a vocation in life, it at least contributes to the pleasure and joy of life, and it is just as important to make people happy as to make them money earners, and music is a powerful agent to that end. Where without such qualifications a blind man or woman might spend a dreary life in listless idleness, he or she may in this way attain a social position many sighted ones will envy.

Blind pupils are taught music just as are seeing ones, by note and by practice. They play just as deftly and correctly as those who have the best vision. The notes are taught in the ordinary way. Then the exercises are dictated by the teacher to the pupil, who writes them in a cipher, consisting of raised dots made with a stylus on stout paper, and so arranged as to constitute the several musical signs. These are read by touch, and the pupil practising at the piano reads with the one hand while he practises with the other, right and left alternately, so that either hand in turn serves for the eyes, and the piece is committed to memory and played over until the teacher is satisfied it is played correctly. Examinations are held annually in both the literary and musical departments by gentlemen of the highest reputation in the respective professions, and the results are fully conveyed to the parents.

Typewriting

All well-organized Schools for the Blind make provision for instruction in the use of the typewriter. It supplies the pupils with a convenient means of correspondence very superior to the pencil and grooved card, and its use teaches

accuracy and precision in writing and spelling. The use of the dictaphone renders it unnecessary for those who wish to become typists to depend upon shorthand notes, and several of our girls have become quite expert.

Piano-Tuning

Special attention is paid to piano-tuning, as this vocation is one in which the blind can always excel, and they compete with seeing tuners on equal terms. One can become an excellent tuner without becoming a thoroughly successful pianist, although it is always urged that those who wish to become tuners should become proficient players, for reasons that are obvious. There are altogether thirty-five pianos in the school, as well as an excellent pipe organ, and pupils are taught to understand the mechanism of the instruments. All the pianos used are repaired in the school, and the pupils have the benefit in this way of learning from their instructor much about the structure of the instrument and the execution of such repairs as a tuner is expected to undertake. Pupils graduating from the tuning department receive a complete outfit of tools and a certificate vouching for his qualifications. Many are filling remunerative positions throughout the province.

Manual-Training

Under the supervision of an expert instructor the boys are given the same opportunity at manual training as is found in the Public and High Schools, and it is really remarkable how expert they become in the use of tools and in the construction of different articles of woodwork. Cane chair-seating, too, is soon learned, and many of the smaller boys take delight in exhibiting their skill in this respect in their own homes, where the work can be done with little inconvenience. Broom-making is also taught, and as brooms are a necessity in every household, lucrative employment has been found for those who select this form of handiwork. But even to those who do not, or are not likely to go permanently into a workshop, there comes such an insight into mechanical methods as may be useful to them in after life.

The Sewing Classes

Under the watchful supervision of a skilled and patient teacher, the girls, whether they choose to adopt music as their profession or not, must follow an outlined course of instruction in sewing. The faculty of passing spare moments delightfully, and of entertaining others with music, vocal or instrumental, is by no means to be depreciated. But the usefulness in the family circle will be complete if, in addition to a delightful accomplishment, the homlier ones of sewing, knitting, fancy-work, and cooking are available, and all these are obtainable by our pupils. Both hand and machine sewing are taught, and not only plain sewing, but every form of work for which the ingenuity of the inventor has supplied an "attachment" to the sewing machine.

Knitting and Fancy Work

The classes in knitting and fancy work afford a rather wider scope for earning money than does the former branch, however useful in a domestic sense the art of sewing may be. The girls buy their own wools, and under the guidance of their teacher, they make knitted articles of every description, which find a ready sale. Many execute orders for friends, who are glad to pay a fair price for the articles. At the great exhibitions on this continent and in Great Britain, both our sewing and knitting room specimens of work have been most favourably commented on.

The Cooking Class

This class is not designed for turning out what are known as professed cooks. To that distinction the most ambitious of our pupils does not aspire. But no one will deny that, as effecting the health and comfort of the family, cookery takes a first place, and if the blind daughter can cook the dinner, set the table, and wash up the dishes while her sisters mind the store or teach in the school, and the mother performs her numerous matronly duties, the blind girl will be a treasure, and this is what we wish all our blind girls to be.

Our classes in cooking are provided with every facility for acquiring a thorough knowledge of domestic science in all its phases.

Physical Culture—Gymnasium

Given the most healthful surroundings, it is universally admitted that the blind youth needs something more. The robust exercises in which seeing youths indulge and which go so far to develop the muscle and give a tone to the whole system, are almost altogether beyond the reach of the blind. The tendency of blindness is to limit physical exercise and to acquire a generally inactive habit. This manifests itself by a desire to sit down and pass away in idleness moments that could be used with profit to the health and physical development. A well-equipped gymnasium helps to overcome this, and this advantage in our school has a most marked beneficial result. Well warmed and ventilated, the gymnasium can be used at all seasons, and is a splendid place for recreation, even when not needed for systematic instruction. The classes assemble at fixed periods as part of the regular curriculum, and are put through their several exercises according to the perfectly scientific method. In addition to this there are opportunities for recreation out of doors. Slides and swings are provided for both boys and girls, and a running track with wires, to which rings are attached by ropes, enable the pupils to run as fast as their legs will carry them without fear of stumbling or getting off the beaten track.

Club Rooms

The boys' club room is fitted up with tables and comfortable chairs, to which they repair at stated times for such games as dominoes, checkers, bagatelle, in all of which they take a great interest. The girls, too, have a sitting-room, in which they have a piano, and many happy moments are spent there after the classes for the day are over, and on holidays.

How the Day is Spent

A brief sketch of the daily life of the pupils will be interesting. The day begins with the ringing of the large bell at 6.30 a.m. That is the signal for every one to be stirring. Pupils must rise, and, after dressing, make their own beds, although some of the smaller boys and girls are unequal to the task, and in the case of others, a certain amount of "tidying" is necessary. Breakfast is at 7.30 after which all pupils must take a morning walk over a prescribed route. At 8.30 the bell summons to the Assembly Hall. The attendance of all is obligatory on this occasion. The National Anthem is sung to the accompaniment of the pipe organ, after which necessary announcements are made by the Principal, and the news of the day in brief is given. The pupils always take a keen delight in this resumé of the morning paper, for it keeps them in close touch with current events, and their information is quite up-to-date. A few records from the best artists are then placed on the victrola, or perhaps a selection is played on the player-

piano, and the day is thus started with the melody of sweet music. The Roman Catholics then retire to a separate room, where a service is conducted by officials of their own communion. For the others, the service conducted by the Principal consists of hymn singing, Bible reading and prayers. At 9 o'clock the literary, musical, sewing and knitting classes commence, continuing, with an intermission of fifteen minutes, until a quarter to twelve. Dinner is at 12, and classes are resumed at 1.30, continuing until 3.30 or 4 o'clock, when nearly all are at liberty. Supper is at 5.30. At 7 o'clock the very young pupils go to bed, the older ones going to the Assembly Hall for evening reading from the best standard literature available. Letters are then read to the pupils or written for them, and the intermediate pupils retire to the dormitory at 8.30. The older pupils, who in the summer time walk about the grounds, or in the winter play games in their club-room, retire for the night at 9.30. On Saturday the younger boys and girls are taken for walks or down town to make purchases, and the older pupils are permitted to go out alone, those who have a slight degree of sight accompanying the totally blind. On Sunday, after the opening prayers, the pupils attend Sunday School classes for an hour in the school, after which everybody goes to church, old and young, under the care of their teachers, the denominations chiefly represented being Anglican, Methodist, Presbyterian and Catholic.

So it will be seen that life in the school is a busy, active life, very different from what the imagination often pictures, and altogether the reverse of that which the blind child or youth is condemned to pass at home. It may safely be affirmed that, allowing for all the defects incidental to their various conditions, and often the lack of an early training it would be hard to find any body of young people in this Province more happy, lively, intelligent and self-respecting than the pupils of the Ontario School for the Blind.

Domestic Arrangements

The ground floor is devoted to class-rooms, business offices, reception room, etc. etc. On the floor above are teachers' sitting-rooms, and clubrooms, practice rooms and library. On the third floor is the large Assembly Hall, with its comfortable opera chairs, its fine pipe organ, and a commodious stage. On the same floor is also the hospital, elaborately equipped, in charge of a well-qualified trained nurse, whose duty it is to take care of those who are sick. In the rear annex are the dining-rooms, domestics' quarters, kitchen, store-rooms and bakery, while beyond these again are the engine-rooms and laundry. The boys' and girls' dormitories are on opposite sides of the main building. In these are to be found the very latest appliances. There are twenty-two rooms in each building for the pupils, each provided with three beds, three clothes closets, and one bureau with three large and three small drawers. The doors are numbered in brass tack point print. Besides the two stories on which the sleeping rooms are located, there are a basement and an attic, with rooms for storage, and every precaution has been used to make the buildings fireproof. In the basement are two large rooms fitted up with shower baths and tub baths, while on the bedroom floors there are several wash-rooms and lavatories which would be a credit to the finest hotel on the continent.

The manual training room is a large separate building, as is also the building where piano-tuning is taught. At a short distance from the main building are the houses of the Superintendent and Bursar. The engineer occupies the lodge house at one of the entrances to the grounds. With two or three exceptions the

officers reside on the premises. The general management devolves upon the Superintendent, while the Bursar attends to all financial matters and the purchasing of supplies. The Matron has entire charge of the domestic departments. In addition to the trained nurse there are also two thoroughly competent nurses, one for the boys and one for the girls, whose duties are to look after the clothing and to report to the head nurse, if necessary, any cases of illness which should go to the hospital.

The dietary is a very generous one, quite equal to that of any high-class boarding school, if not superior to most. The pupils have a hot dinner daily, with dessert and as great a variety as can be desired. At the same time the pampering of the appetite is discouraged, and pupils so indulged, as is often the case at home, soon learn to enjoy the plain but plentiful and wholesome provision made for them. Watchfulness over the pupils' health and prompt treatment in case of sickness are further secured by a daily visit from the school physician, and once a year at least a well-qualified eye specialist makes an examination of all the pupils' eyes. In addition to this, a thoroughly competent dentist takes care of the teeth of every pupil attending the school.

Correspondence

Pupils may correspond with their friends as often as they please, and once a month it is obligatory on them to do so. On that occasion the postage is provided by the school. All letters received for pupils are supposed to be opened by the Superintendent and handed by him to the respective officers on duty to be read to the receivers. The strictest confidence is observed in regard to the contents of such letters. Money remitted for pupils is placed in the hands of the Bursar, and it can be drawn out when required. This method avoids the risk of money being dropped or lost, with the disagreeable results such accidents are likely to entail.

Vacation

The regular annual session commences on the fourth Wednesday in September, and continues until the third Wednesday in June. Previous to the summer vacation all parents or guardians are notified of the place and hour at which the pupils may be expected to arrive. A similar notice is sent when the pupils reassemble. A guide usually accompanies every party of pupils to their destination. The railway companies grant special rates for the round trip on very liberal terms. It is cause for profound satisfaction that since the school's existence no accident attended with bodily injury has ever befallen a travelling pupil. The care taken by the guides and the very kind and thoughtful attention of the railway officials, who take a friendly interest at all times in the blind traveller, have conducted doubtless to their immunity from harm and danger.

Visitors

Visitors desirous of inspecting the work and methods of the school are welcomed at any time during school hours, and conducted through the building by an attendant. Saturdays and Sundays, however, are closed days. Pupils' friends and relatives are entitled to visit them whenever they please, but the school cannot undertake to provide accommodation for parents whose homes are at a distance.

Inspection and Control

The school is under the direct supervision of the Minister of Education. To him, as the representative of the Government, all the officials are strictly responsible. It is the wish of all connected with the school that everything should be

done to enhance the comfort and happiness or aid the progress of the pupils, and thus strengthen the school in the confidence of the public. All applications for admission, or information, should be addressed The Superintendent, Ontario School for the Blind, Brantford.

Date of School Opening

The term will re-open Wednesday, September 27th, of this year (1922), and the attention of the parents is drawn to the fact that pupils should not be permitted to return to the school without an adequate supply of clothing. It is not to be expected that sturdy boys and girls can go through the school year from September till June with only one suit of clothes and one pair of boots.

The following list is intended to draw attention to the articles of clothing needed, and it is also urged that each article be *plainly marked* so that there will be no danger of loss in the laundry:

Girls' List

All articles to be marked with name, and all to be in good condition.

4 Middies.	
2 Skirts, dark and of good quality.	2 Pairs of shoes.
1 Sunday dress.	1 Cap.
3 Undervests.	1 Pair of gloves for winter.
3 Pairs of drawers.	Comb and Brush.
2 Dark petticoats.	Tooth Brush.
1 Light petticoat.	Kimona
3 Night dresses.	6 Handkerchiefs.
3 Pairs of stockings.	Slippers.
1 Pair rubbers.	Extra shoe laces.

Boys' List

All articles to be marked with name, and all to be in good condition.

1 Suit for Sunday.	2 Sweater coats.
2 Extra pairs of pants.	Suspenders.
1 Overcoat.	1 Pair of mittens.
2 Light blouses (to be made with collar and waist band).	Neckties.
2 Dark blouses.	6 Handkerchiefs.
3 Suits of underwear.	1 Comb and Brush.
6 Pairs of stockings or socks.	1 Tooth Brush.
2 Pairs of boots.	2 Caps.
1 Pair of rubbers.	2 Wash cloths.
2 Night shirts.	Extra shoe laces.

PHYSICIAN'S REPORT

Hon. R .H. GRANT, M.P.P.,
Minister of Education for Ontario.

Sir:

I beg to submit my report as physician at the School for the Blind for the year ending October 31st, 1921.

The session was an unusually fortunate one from the standpoint of epidemics or serious illnesses. The one exception was the loss by death of Miss K. Burke.

During the year she was forced by ill-health to leave the school. She died later with a member of her own family. She was an officer of some years' standing and was held in very high esteem by officers and pupils alike.

One pupil was operated on successfully for appendicitis during the year.

In September the pupils came back in good general condition. A few days later, however, two cases of Diphtheria developed.

These were successfully treated at the Brantford General Hospital.

Notwithstanding the comparative freedom from serious illnesses, there is naturally a continuous chain of minor ailments among the pupils that require daily attention.

I want to express my endorsement of the faithful and efficient work done by Miss Wright as head of our Hospital ward.

Respectfully submitted,
J. A. Marquis.

Brantford November 15, 1921.

REPORT OF MUSICAL INSTRUCTION

To The Honourable R.H. Grant,
Minister of Education.

Sir:

I have the honour of presenting my report on the Musical Department of the Ontario School for the Blind.

The examinations to which this report refers were conducted on Wednesday and Thursday, June 8th, and 9th.

The subjects included were, Piano, Solo-singing and Voice culture, Class singing, Theory of Music, Violin, and Piano and Harmonium Tuning.

The Piano Class, although smaller than in previous years, still maintains the high standard of the past three years. Six pupils gained honours and seven passed; one candidate who took the teachers' examination of Professional Standard passed a good examination in practical pedagogy.

Much credit is due to Miss Killmaster and her assistants, Miss Smyth and Miss Howell for these excellent results.

In solo-singing the pupils as a whole gave a very intelligent reading of their selected pieces and studies, and their tone quality was unusually good.

Several Juniors passed well; one intermediate gained Honours, and one pupil who reached the licentiate standard sang with much refinement and artistic feeling.

The choral class, conducted by Miss Killmaster, who is assisted by Miss Howell is a district credit to the school.

The performance of several part-songs was marked by Beauty of Tone, clarity of Diction, and expression that was not exaggerated in any way. The rendering of Sir Henry Bishop's glee, "Now tramp o'er Moss & Fell." Solo and Chorus, was very delightful.

The Violin class, under Miss Jones' direction is promising well, but at present is only in the elementary stage—with one exception.

This Senior Violin Student performed several pieces, displaying good tone and attack, excellent bowing and intelligent phrasing.

In the Theory of Music, six pupils passed in Rudiments, three obtaining high honours.

I venture to hope that in the coming session, Harmony, History and Musical Form will be taught to all students in the higher grades of Piano, Violin, Organ playing and Singing. These subjects are absolutely essential to all who wish to excel and to specialize in Instrumental or Vocal Art.

Piano and Harmonium Tuning and Regulating—The teacher of this important class is Mr. Ansell, who is an expert tuner. A class of some twelve pupils are doing excellent work under his guidance.

The pianos in the school are now in good condition and this is due to the fact that Mr. Ansell and his class of youths are responsible for the tuning and repairing of all the instruments.

It is interesting to note that, during the past few years, a number of pupils from the Tuning class have obtained good employment in Toronto and other important cities. One student is holding a post of some responsibility in China.

I have much pleasure in offering my testimony as to the capabilities and general work of Mr. Ansell in his capacity as Tuning Master to the O. S. B.

I noted with much satisfaction that the Braille system of point print is now being used practically throughout the School. This is an important step in the right direction. I was again much impressed by the attitude of the children during prayer, and by their excellent Hymn-singing at morning service, conducted by the Principal, Mr. W. B. Race.

In conclusion I would offer my congratulations to the Principal and to his assistants of the Music Faculty on the progress that has been made in Music generally during the past year.

I have the honour to be, Sir,

Yours obediently,

ALBERT HAM.

Mus. Doc. F. R. C. O.

Toronto June 9, 1921.

OCULIST'S REPORT

To The Hon. R. H. Grant,
Minister of Education.

Sir:

I have the honour to report the results of the Examination of the Pupils' eyes for the year 1921.

A larger number of new pupils than usual were examined for the first time this year.

Condition of Sight

	Males.	Females.	Total.
1. Without perception of light in either eye.	1	1	2
2. Perception of light in one eye, none in the other	4	6	10
3. Perception of light in both eyes	4	2	6
4. Limited objective vision in one eye	2	1	3
5. " " " " both eyes	11	3	14
	22	13	35

Particular attention was given to the degree of sight possessed by each pupil entering, as well as a careful revision of some of the pupils of former years because it is generally felt that the special method of education given at this school ought not to be applied to those who might even with some difficulty and special attention obtain their education at a public school or at a so-called sight-saving school. A few were found who in my opinion might in their own interest better retire.

Diseases Causing Blindness

	Males.	Females.	Total.
Optic Atrophy	5	1	6
Ophthalmia Neonatorum	2	4	6
Injury to one eye followed by Sympathetic Ophthalmia in the other	4	—	4
Cataract	2	1	3
Retinitis Pigmentosa	1	2	3
Poorly developed nerve.	1	1	2
Microphthalmus	1	1	2
Myopia	1	—	1
Hyperopia	1	—	1
Injury to both eyes	1	—	1
Interstitial Keratitis	1	—	1
Keratitis and Iridocyclitis	—	1	1
Buphthalmus	1	—	1
Persistent Hyaloid Membrane	1	—	1
Measles	—	1	1
Scarlet Fever	—	1	1
	22	13	35

Again I have to call attention to the large number rendered blind by injury to one eye followed by Sympathetic Ophthalmia in the other eye, and the sight of all these eyes is very bad, as it is also in the unusually large number entering this year blind from Ophthalmia Neonatorum. It is possible I am in error in diagnosis of some of these last because ignorance or wilful suppression of the history of such cases makes it necessary to fall back on clinical appearance only.

It became necessary to remove one eye during the term, but beyond that the eyes and ears of the pupils gave very little trouble from acute conditions. It might be worthy of note that one pupil had a cataract removed by Col. Smith, of India. This had been thought inoperable but Dr. Smith made a successful extraction. The results however cannot be estimated as yet.

Respectfully Submitted,
B. C. BELL.

Brantford. Ont., Nov. 19th, 1921.

LITERARY EXAMINER'S REPORT

To the Hon. R. H. Grant, M.P.P.,
Minister of Education for Ontario.

Sir:

Herewith I submit my report as Literary Examiner at the Ontario School for the Blind, for 1921.

Organization and Management

The same organization prevails as prevailed last year. Mr. Cole and Miss Summerby conduct the High School Classes and the Public School Classes are in charge of Mr. Cole, Mr. Langan and Misses Lowry, Moffitt, MacGuire and Patterson.

The curriculum is essentially the same as that laid down by the Department for Provincial schools. The school is classified on a six grade basis rather than an eight, and the course of study modified accordingly.

High School Classes

The same subjects are being taught as reported last year, and the curriculum is essentially the same. The arrival of books in Braille and of some instruments is making the work more satisfactory. I was particularly pleased with the work in all the classes and especially so in Literature, Physics and Geometry.

Public School Classes

The same arrangement of classes and curricula exists as last year. Mr. Cole and Miss Summerby take Entrance work with the Fourth Book Class. The class was well advanced and some will undoubtedly be advanced into the High School this year.

Mr. Langan is in charge of Third Book class, which has made considerable progress. Mr. Langan is an active teacher and has vindicated my prediction of last year that his usefulness would increase with his experience.

Miss Moffitt is in charge of a class embracing Senior Second and Junior Third work. The same high class of work prevails in this class this year as was mentioned last year.

Miss McGuire is in charge of a First and Second Book class, which also covers some History, Hygiene and Nature work. Miss McGuire is doing very efficient work and readily secures the interest of her pupils.

Miss Lowry has charge of a Primary class and a few First Book pupils. Miss Lowry is doing excellent work and secures splendid results from her pupils. The pupils in this class begin to write Braille.

Miss Patterson is temporarily in charge of the Kindergarten-Primary class. Kindergarten boards and pegs are used for instruction in Braille. Number facts to nine are learned and simple addition and subtraction. The usual Kindergarten work such as weaving, sewing, folding, clay modelling and raphia work is conducted. This class being the Junior one of the school, and containing pupils that have entered at various times during the year, is necessarily less uniformly graded than the other classes, and the work is of a more individual character.

Manual Training Work

Mr. Donkin has, as usual, a fine display of Manual Training work, such as book racks, lamps, trays, hall trees, cabinets, desks, flower stands, etc. Considerable attention is being given to cane work, which appears to me as being well suited for blind pupils. The usual broom making is still carried on.

Miss Haycock exhibited many fine specimens of the work of the girls in Knitting, and Crocheting. Interest in this work is shown by the fact that one pupil, during the war, made over 600 pairs of socks.

Miss Cooper has a practical course in Sewing, and Cooking, which is much appreciated by the girls, although carried on in poorly furnished quarters, which are much too small. I am pleased to learn from Principal Race, that a well-equipped Household Science room is to be provided during the coming year.

Miss Burden has a very efficient class in Typewriting. The pupils acquire great speed and accuracy. Work was done from the Dictaphone.

General Remarks

- (1) The organization, classification and equipment is better than formerly.
- (2) Owing to Miss Summerby being absent through illness, I was unable to see her teaching, but judge from the work of the pupils that it is very efficient.
- (3) Mr. Race deserves great credit for having secured a staff of such efficiency and one that works so harmoniously.

I have the honour to be, Sir,

Your obedient servant,

E. E. C. KILMER.

Brantford, June 11, 1921.

How shall Parents Manage Their Blind Children in their Early Years at Home and how Bring them up?

If you have a blind child, consider that God has given it to you to be tended with unusual love and care. If you give it proper care and it lives to grow up, it will be a capable and happy human being, who will fill its place in life and will bring comfort to you. But if, on the contrary, you neglect or spoil your child, it will then be a poor bit of humanity, a burden both to you and to itself. Hence attend to the following rules:

1. Treat the blind child exactly as if it were a seeing child, and try as early as possible to make it put its body and mind into action. As soon as it begins to use its hands give it toys to play with. Talk to it, sing to it, and give it toys that make a noise, to attract its attention and arouse its mind.
2. Teach the child to walk at the age when seeing children learn.
3. Do not allow the child to sit long in one place alone and unoccupied; but encourage it to go about the room, in the house, in the yard, and when older, even about the town. Teach it to know by touch all objects around it.
4. As soon as possible teach the child to dress and undress, to wash itself, to comb its hair, to take care of its clothes, and, when at table, to use properly spoon, fork and knife. A blind child can do all these things as well as a seeing child; but you must give it much practice in doing them; because it cannot learn by observation.
5. Watch carefully the child's personal appearance. It cannot see how others act, and so readily acquires habits which are disagreeable to its companions. Some of the most common mannerisms of blind children are rocking the body, twist-

ing the head about, sticking the fingers into the eyes, distorting the face, swinging the arms, stooping and hanging the head in walking and bending over in sitting. As soon as you observe such practices in your child, you should make a vigorous attempt to break them up; for, if they once become habitual, years of schooling may be unable to overcome them.

6. Permit the blind child to play as much as possible with seeing children, and to romp often with them out of doors. Frequently take the child walking, and direct it in some simple physical exercise. If it is obliged to sit still, you should at least give it balls, pebbles, blocks, a doll, a harmonica, or such other toys as appeal to touch and to hearing.

7. If you would inform your child of the world about it, you must let it touch all the objects that you can get at, and must teach it to appreciate space and distance by actual measurements. To cultivate its sense of touch, let it handle familiar objects, like different woods, plants and coins.

8. Allow the child to take part as early as possible in household duties. Allow it to string buttons or shells; to shell and pick over beans, peas and nuts; to clean furniture and kitchen utensils; to wash dishes; to grind the coffee; to peel potatoes; to gather the fruit in the garden; to feed the hens, doves, dog, cat and other domestic animals. You can also occupy the child pretty well in easy handiwork, such as winding yarn, braiding the hair and in course knitting.

9. Speak with your child much and often, for, since it cannot read the loving care which is written on your face, it has special need to hear your voice. Ask the child frequently what it hears or feels, and induce it to ask many questions as to what is going on around it.

10. Take care what you say before your child; for the blind child is more attentive to all that it hears than the seeing child is, and for this reason retains it better.

11. When in the presence of your child, never indulge in expressions of pity for its blindness, and suffer no one else to do so. Such expressions can only discourage and depress the child. Rather seek to encourage it and keep it engaged in happy activity, in order that it may strive cheerfully and courageously to be independent later in life, and to do without external consolation and assistance.

12. Give the child occasion to exercise its memory. A good memory will later be found invaluable. Have it commit to memory such proverbs, short poems, and stories as it enjoys.

13. The blind child's moral and religious nature can be developed just as early as the seeing child's.

Meeting of the Alumni Association

The Alumni of the Ontario School for the Blind held their second conference on June 20th, 21st, and 22nd, and all declared that it was, if possible, an even greater success than the reunion two years ago.

The Boy Scouts of the Salvation army met every incoming train and escorted the arriving guests to the waiting motors of members of the Brantford Kiwanis Club, who in turn brought them up to the school. Each new arrival registered his name and paid a fee of one dollar upon entering the building, and was then greeted by old friends. Many were the happy groups wandering here and there

about the grounds and buildings, or sitting under the trees and enjoying the renewing of old ties. As Mr. Raymond, later on, quoted from Abe Lincoln, "Our friendships are more than half of our existence," and few friendships are so enduring as those formed in school.

Some of the members present had been pupils in the school in 1872, notably Mr. Askelon Leppard, and his brother Mr. Sanford Leppard, of Toronto, the latter of whom kept up a steady stream of pleasantry during the whole of the proceedings. Mr. F. W. Johnston, who was elected President of the first convention, carries on an extensive Mail Order business in Toronto, and is deeply interested in the Canadian National Institute for the Blind.

Among the well-known musicians present were Mr. Charles Duff, of Niagara Falls, a gifted organist and pianist with a special "flair" for accompaniments. Mr. Herbert Treneer, who is a student at Knox College, plays the organ acceptably there and in Oshawa. Mr. Albert Kaiser, who has a big sonorous voice, and led in much of the singing, is a tuner in the Bell Piano Factory at Guelph, and Miss Gladys Thompson, of Toronto, who has a sweet soprano voice, did much to make the gathering an enjoyable one.

The first formal meeting was held on the evening of the 20th, with about one hundred members present. The Rev. Mr. Easton, of St. Andrew's Presbyterian Church, gave the invocation and Superintendent W. B. Race delivered an address of welcome to which the President, F. W. Johnston replied.

Mr. Johnston struck the keynote of optimism in his statement that blindness should not be considered an affliction, but only a handicap, and the whole tone of the conference was in harmony with that idea.

He hoped that all had come to the reunion first, of course, for pleasure, but also to advance the welfare of the blind. He spoke of Mr. Stewart, of Montreal, who had lost his sight through an accident when sixteen years of age, and yet who was not discouraged, but had gone on through school, through McGill University, had taken up a law course, studied French law for a year, and was now one of the shining lights of the bar in Montreal. Mr. Fraser, a friend of his family, was responsible for this success, because of the encouragement he had given.

A great deal could be done by the blind themselves to help along the work of the Canadian Institute for the Blind. In this wonderful organization there were nine distinct activities carried on by the adults as follows: (1) The work of the Head Office itself. (2) The Library, containing 9,000 volumes, with a membership of 725. (3) The Broom-Shop. (4) The Men's Industrial Department for Vocational Training. (5) The Women's Industrial Department. (6) Clarke-Wood, the Women's Residence. (7) Pearson Hall, where blinded soldiers were instructed. (8) The Sales Department, through which the blind could find a market for the work they were doing at home. (9) A Normal Department, where teachers are trained to carry on home teaching.

Lastly Mr. Johnston dwelt on the subject of getting about alone, referring to a member of the State Legislature in Oregon, now campaigning for membership in the state senate, and he had never used a stick.

The evening closed with an impromptu concert. Mr. Albert Kaiser took the piano and soon all were singing, "When you and I were young Maggie," and other old songs. Mr. Kaiser sang alone, Mr. Duff gave an organ solo, Miss

Squair recited a humorous selection on Committee work, Mrs. Ratcliffe gave a recitation, Mr. Treneer gave a fine vocal solo, followed by several selections by others as they were called upon by the audience, all who could responding readily, and being given an enthusiastic reception.

Next morning at nine o'clock the session opened with an address by W. G. Raymond, at that time Postmaster of Brantford, but now member of Parliament for South Brant, and one of the most distinguished of the ex-students of the School. Mr. Raymond spoke of the favourable circumstances surrounding the present meeting, the longest day in the year, in the most beautiful month of the year, in the garden county of the banner province of the wonderful Dominion of Canada. Then with a smile he told of how every county in England claims to be the "Garden County," of meeting at last an Englishman who had mentioned coming from Surrey, without claiming that it was the garden county. But within a few minutes someone had asked what was the garden county of England, and he had answered promptly, "Why, Surrey, of course."

Mr. Raymond then spoke feelingly of the death since the last Alumni meeting of Mr. Roger Roberts, whose generous, fine, and noble nature had won him many warm friends. Here it was he quoted Abe Lincoln's words, and expanded the theme of the large part paid by friendship in our lives.

Next he brought forward the suggestion that the year, 1922, be made the occasion of the Jubilee celebration of the founding of the Ontario School for the Blind, fifty years before. He then proceeded to outline the progress made since that time, and ended with some words of appreciation of the work of the present principal and staff.

The next speaker was Mr. Joseph Burns, of Minden, whose plain tale of his life was full of human interest. It was a story of misfortunes staunchly met and hardships bravely overcome. Though totally blind he is a successful farmer and the father of a family of eight girls and five boys.

He left the Ontario School for the Blind in 1895, and for some time made baskets at home and did other odd jobs. The winter of 1896-7 had been a time of depression, and in order to make a little money he and two others had undertaken a contract for getting out lumber. The next day the other two had thrown up the job, but he had stuck to it and carried it through.

No one who heard the story will ever quite forget his account of the day he sat on a biscuit box in front of the grocery store that had refused him credit, and had put his head down in his hands and wondered what would become of him. He was married at the time and trying to pay for a farm until sickness and misfortune had reduced him to dire straits. The merchant seeing his despair pressed a two dollar bill upon him which he uncomprehendingly accepted.

A few moments reflection, however, brought him to a sense of the real meaning of the act and returning into the store he handed the money back, refusing gratefully what seemed too much like charity. Next day the grocer told him he could have all the credit he needed, so impressed was he by the incident, and so convinced that such a spirit should be encouraged. From then on matters had bettered themselves, until now he was quite on his feet.

Mr. Swenerton, Manager of the sales Department of the C.N.I.B., in Toronto, lost his sight in the war, and is the "cheer up man" of Sir Arthur Pearson's book, "Victory over Blindness," that is to say, he was given the task of going from hospital to hospital to bring comfort and courage to the newly blinded soldiers there. He gave an interesting address on his present work.

Mr. Albert Lott, of Brussels, is one of the Alumni who is taking a University course. He expects to receive his degree from Queen's University and then to enter the Methodist Ministry. He gave a modest and straightforward account of his struggles and defeats and triumphs, claiming that as he had no extraordinary ability anyone could do as well as he had done.

The afternoon session opened with an address by Mr. S. C. Swift, M.A., Librarian for the blind in Toronto. He took as his subject "The Limitations and Possibilities of Blindness," and treated it in an unusually interesting manner. "If thou canst believe, all things are possible" he quoted, and took this stimulating thought for his text. Physical blindness does not imply any deficiency in ability or in the qualities of true manhood. Cicero said he had a blind teacher of geometry who could draw a line as straight as he could himself. Homer was blind, if we could believe tradition. In all ages blind people had entered into remarkable walks of life.

In 1891 for instance, a noted blind sculptor did several famous bronze pieces in France. The present chaplain of the United States was blind. A former pupil of the school. Arthur Barnard, now in Edmonton, had his M.A., and B.D., degrees, and occupied a chair in Church History. Dr. Babcock, of Chicago, the author of a valuable work on diseases of the heart, a book now used in Canadian Universities, was blind. Another younger medical man was on the Chicago Public School medical staff. There were many successful salesmen among the blind.

Mr. Swift went on to prove that almost every line of activity is open to blind people. But with all this success, intellectual force figured itself forth in physical form, and there must be some limitation, if not in quality then in quantity of work done. The real leap that a blind man might take depended most of all on attention. If a man's attention were clean and healthy and well-directed, he would attain success, he would avoid becoming a dreamer. The speaker advocated advanced education for every person, even if he had to come back to manual labour afterwards. The limitations of blindness were social, intellectual, and economic, and he was of the opinion that every person who had been blind twenty years was somewhat abnormal, which came from the fact that all sighted people live in a totally opposite way to the blind. No matter how it appeared otherwise, he said, the blind were not received into the hearts, confidences and homes of other people. People also found it hard to believe that the blind could do things as well as normal people; if anything were placed on the market as well-made as if done by a sighted person, it raised the whole status of the blind of the community, and on the other hand one blind beggar on the street did more harm to the struggle for emancipation than a dozen successful men could overcome. One last thought was to remember that every blind person was a missionary who had to "save" the Macedonian public from their error in regard to the blind.

Miss Nesbitt, of Walkerton, gave a very refreshing little talk on her experiences as a child and later. She is richly gifted with the saving grace of humour, which has helped her over many hard spots in life. That and a resolution she made in early years never to refuse to do anything that was asked of her, have made her life rich, full and happy, in spite of her hardship. On leaving school she had gone to her home in the country, where she had tried to work up a music class. It was slow, hard work, but after trying her prentice hand on her younger brother, she was convinced she could do it. She coaxed from

her father permission to use the old white horse, which her younger brother drove for her, and in due time she worked up a good-sized class. She told with much humour the story of the day the old white horse had buried himself in a snow-drift, and of how they had to extricate him. But this did not daunt her. Neither did the request that she take charge of a large Sunday school infant class, or later a class of young girls, all of whom had become her personal friends. She acknowledged having had many secret misgivings at times, but she did not allow them right-of-way, and in every case her courage has been amply justified.

Miss Ethel Stevens, of Peterboro,' was unable to come, and her paper was read for her. Her subject was "Home Teaching," and was treated in a very practical and concrete way. She said she watched the papers to find possible employment for any of her pupils, and sometimes did find it in the most unlikely forms, such as canoe caning, for example. Her work was as varied as the individuals she visited. One lad she had trained to go about on the streets alone; one man over seventy years of age she had taught to read, and for others she wrote letters or did other necessary services.

President Johnston here remarked that he hoped the time would come when there would not be a single blind person in Canada who would not be reached by the home teachers who were now being trained in the Canadian National Institute for the Blind.

Mr. J. B. Leaney, of Port Dover, struggles under the double handicap of total blindness and a growing deafness that necessitates the use of an electrical device for magnifying sound. But in spite of these, he has with almost incredible patience and fortitude won his way to a competence, and better still, to the genuine respect and affection of all who know him. In May, 1887, two years after leaving the Ontario School for the Blind, he had opened a small candy business, with a capital of \$13.95 in cash, a show case and a pair of scales. Since then it had been a story of steady increase in business and growing prosperity. He had used hand power at first for making the ice-cream, then had utilized his delivery horse for the same purpose, and had finally installed a gas engine, and has spent much time and patience in learning all about the latter, until he could manage it entirely himself and make any necessary repairs unaided. He has now a good confectionery store and bakery in Port Dover, and, by the way, was so kind and generous as to have sent over several gallons of his best ice cream as a treat to all the guests at the Convention just before their departure for home.

A paper on Osteopathy written by Dr. Parke, of Midland, was read in his absence and much appreciated by the doctor's former school companions. Dr. Parke is not the only graduate from the school who has made a successful practice in the field of Osteopathy.

The Committee on Resolutions brought in the following resolutions which were moved by Sanford Leppard, seconded by S. C. Swift, and approved:

THAT WE, the members of the Alumni Association of the Ontario School for the Blind, in Convention assembled under the hospitable roof of the old School, desire to place on record our appreciation of the fact that the School has now entered upon its Year of Jubilee, having been first opened for instruction on 1st of May, 1872.

AND THAT, whereas, since that date, marvellous progress has been made in all directions by the Dominion and particularly by the Province of Ontario in educational matters, we wish to express our appreciation of the progress that has been made in the important matter of the education of the blind. We observe great improve-

ments in all departments; in the grounds and in the various buildings in everything that tends to the care, comfort and health of the pupils. Great strides have been made in the equipment for musical and technical instruction of the different kinds undertaken at the School.

AND THAT, there has been marked improvement not only in the educational, musical and technical instruction, but that the domestic training and social status of the pupils have recently reached an advanced stage that was undreamt of in the earlier years of the Institution, and this, we believe, is a very important part of the education of the pupils who are to take their place in the sighted world as useful men and women. There is a congenial atmosphere of happiness, cheerfulness, content and loyal obedience to constituted authority, such as exists in few schools, and in nowhere more than in the O.S.B.

AND THAT, we desire to place on record our appreciation of the work of the members of the excellent teaching staff whose untiring efforts have contributed so much to the real and practical success of the School.

AND THAT, we consider it was a fortunate day for the pupils of the School and for the blind of the Province when the present Superintendent was selected to guide the destinies of the School and with them the fortunes of its scholars. He has shown himself the possessor of those rare qualities of heart and brain that are requisite: judgment, firmness, sympathy, keen interest in the work in which he is engaged and whole-souled devotion to the ultimate success of the pupils. And that the happy results which we have been so much pleased to observe have been mainly brought about through the efforts of Superintendent W. B. Race, B.A., and Mrs. Race, M.A., to both of whom we express our warmest appreciation and heartfelt gratitude, and hope that a kind Providence may long grant to them both, health, strength and happiness.

RESOLUTION No. 2:

Whereas, for many years philanthropic individuals and organizations interested in the welfare of the blind have, in many parts of the civilized world, devoted much time, thought and money to the improvement of the conditions under which the adult blind have been obliged to live and work; and,

Whereas, though the education of the young blind of Canada was first undertaken as early as the year 1861, by Father Rousselot in his institution since known as the Nazareth School for the Blind at Montreal, and has since been extended and developed to a large and commendable extent by the establishment of important schools for the blind in other parts of the Dominion—the cause of the adult blind has, until recently, received little but sporadic and individual attention; and,

Whereas in the late world War with the great toll of blinded soldiers it took, among whom were many Canadians, the consideration of the questions of the care and training of these gallant men was made of capital importance by governments and peoples throughout the civilized world, resulting in the organization of such splendid educational institutions as the famous St. Dunstan's Hostel for Blinded Soldiers and Sailors in London, England; and,

Whereas the attention thus given to the needs of these blinded soldiers has extended to the condition of the adult civilian blind; and,

Whereas, to endeavor to satisfy and systematize the needs of, and activities for our Canadian soldier and civilian blind, the Canadian National Institute for the Blind was organized and chartered in 1918, under the laws of the Dominion of Canada; and,

Whereas, the said Institute has already justified itself by its fruits and has brought hope and happiness to great numbers of the blind of Canada of both sexes and both classes herein mentioned; and,

Whereas, the major activities of the said Institute have been confined to the Province of Ontario, and have, therefore, reached and benefited more of the blind of that Province than of any other, among which beneficiaries are found many of the former pupils and graduates of the Ontario School for the Blind; and,

Whereas the Alumni, past and future, will be directly interested and concerned in the continued success and development of the said Canadian National Institute for the Blind; be it therefore,

Resolved, that the Alumni Association of the Ontario School for the Blind, in reunion assembled do officially and earnestly endorse the work and the policy of the said Institute on behalf of the adult blind of the Province of Ontario; and do further thank the Government of the Province of Ontario, for its far-sighted and generous financial assistance extended to the said Institute and for the steady confidence and support given to the work it has thus far so successfully carried on; and further be it

Resolved that copies of these resolutions be forwarded to the Premier of Ontario, the Minister of Education and the Provincial Treasurer.

The following officers were elected in open meeting:

President,Sanford Leppard;
1st Vice-President,Elizabeth Nesbitt;
2nd Vice President,Herbert Treneer;
Secretary-Treasurer,W. B. Donkin;

Before leaving for their homes the members of the Association expressed their warm appreciation of all who had contributed to their comfort and pleasure during their visit to the officers of the school, to the members of the Kiwanis Club, and to the Boy Scouts of the Salvation Army.

Among the maids and helpers, boxes of chocolates were distributed lavishly and everybody voted the gathering to be a huge success in every sense of the term.

APPENDIX Z

ONTARIO SCHOOL FOR THE
DEAF

ANNUAL REPORT OF THE SUPERINTENDENT

TO THE HONOURABLE R. H. GRANT, M.P.P.,
Minister of Education for Ontario.

SIR:

I have the honour to submit for your consideration the annual report of the Ontario School for the Deaf for the year ending October 31st, 1921. In presenting this report I am pleased to be able to state that the work of the school for the year was satisfactory and good results obtained.

The Attendance

The average attendance during the session of 1920-21 was 245, and that for the preceding session of 1919-20 was 241, which shows an increase of 4 over that of the previous session. The number on the roll at the close for the summer vacation in June was 239. Of this number 21 did not return to school in September. At the re-opening in September 268 pupils were present and on October 31st this number had increased to 270. This number will likely be further increased during the year by the return to school of pupils detained at home through illness and it is expected that the average for the year will be over 270. As a consequence of such a large attendance two additional classes were formed in September, making 24 classes in all with a staff of 25 teachers. It is expected that a further large increase of pupils will take place next year and that additional teachers will be required.

In this connection, I desire to thank Mr. Cowles, Provincial School Attendance Officer, for the very valuable assistance given us in locating and getting into the school many of these new pupils.

New Main Building

The portion of the new main building which has been under construction for some time is now nearing completion. It is well, substantially and, I believe, economically built and when completed will be one of the most modern school buildings of the Province and for utility the equal of any school for the deaf anywhere.

The present structure consists of offices and twenty-one school rooms with rest and recreation rooms, etc. When completed there will be thirty-three school rooms, sufficient it is hoped to provide for the greatly increased future attendance which is even now in evidence. The remaining school rooms, the assembly room and the dining room should be proceeded with, without delay, as the needs are great and the prolonging of building operations has an upsetting effect on the work of the school.

The Farm

The yield from Ontario farms during the past season was not up to the average and fell very much behind the yields of the bumper crops of the previous years. Our farm, as with the others, did not produce up to expectations, still the yield was good and perhaps above the average for this district. With the exception of potatoes, it supplied practically all our vegetables, an abundant supply of apples, most of our small fruits and eggs and an abundant supply of milk.

The milk produced during the year was 51,663 quarts, which if purchased at say 10 cents per quart, would have cost us \$5,166.30. The milk is obtained under the best sanitary conditions and the abundant supply along with that of fresh eggs, fruit, etc., makes the farm a valuable adjunct to the school equipment and gives to at least most of our children a food supply superior to that attainable at home.

The Expenditure

In considering the expenditure for the year 1920-21 account must be taken of the fact that it was late, perhaps nearing the last quarter of the year, before the reduction in prices of supplies was obtained to any appreciable extent. As a consequence, the reduction in the cost of food supplies was not great for the year and there was practically no reduction in the other classes of supplies.

The total expenditure for the year was \$137,786.91 and for the year 1919-20 it was \$132,221.36 showing an increase of \$5,565.55. The revenue for the year was \$11,171.44 and that for 1919-20, \$10,066.57 showing an increase in revenue of \$1,104.87. In addition to this increase in revenue there were 1,00 tons of slack coal valued at \$8,870.00 on hand over that of the previous year. Therefore, while the total expenditure shows an increase, the net expenditure showed a decrease of \$4,409.32 notwithstanding the very large increase in salaries, due largely to the increase in teachers' salaries and to salaries of additional teachers. In the present year, 1921-22, while no decrease can be looked forward to in salaries, the great reductions in the prices of many commodities will enable us to hope for another and considerable decrease in the cost of supplies and further reduction in the net expenditure of from \$5,000 to \$10,000 without in any way impairing the efficiency of the service.

Higher Education for the Deaf

During recent years, and especially the last two or three years, great advances have been made in Canada in educational ideals and methods. In Ontario the age of compulsory attendance has been raised and provision has been made or is being made to establish consolidated schools and district high or continuation schools, to enable, even compel all children, both urban and rural, to secure an education considerably in advance of that provided by the ordinary public schools both in the academic subjects and in practical training. All of which is most commendable. But no provision is being made to give similar advantages to the deaf children, although their need is greater, as is set forth in the following editorial in "*The Canadian*," the paper published at the Ontario School for the Deaf:

"The standard of deaf education in Ontario, and we presume in all the provinces, as throughout the world, has greatly advanced in recent years, the requirements in this School for successful graduation being the equivalent of the High School Entrance examination. But such an ultimate standard is obviously too low. As far back as 1911, in his Annual Report, the Superintendent of the Ontario School advocated the establishment of a High School course for both technical and academic training, but like so many other important projects, the matter was left in abeyance during the period

of the war. But the time has surely arrived in the development of our educational work when Canada should provide adequate facilities for more advanced education of her deaf children. Quite obviously boys and girls handicapped by deafness, who have to make their way in the world in competition with hearing children, should have at least as good educational advantages; it would be quite fair to say that they have a greater need for a good education than have children possessing all their faculties. But it is a fact that nowhere in Canada can a deaf child at present obtain more than an ordinary public school education, except that two boys of outstanding ability and aptitude for language have been able to pass through the High School and successfully take up the University course. Barring these exceptional cases, a deaf child who wants to get more than a public school education must go to the United States for it, as a number of Canadian deaf children have done, graduating with honors in most cases. The cost of doing this, however, is beyond the means of nearly all the deaf, and in any case Canada is abundantly able, and should be very willing to provide the necessary facilities for at least a High School course for all deaf children desiring it.

It would be needlessly, in some cases prohibitively expensive to have such a school in each province, and even if otherwise feasible the attendance in most of the provinces would be too small to justify the outlay necessary to enable the work to be carried on with a reasonable degree of efficiency. Until the population of Canada is much greater than at present, the only satisfactory scheme would be to establish one such school, to be open to the pupils from every province, the cost of establishing the school, and of tuition, which should be free, to be borne by the Dominion Government, and the cost of board to be defrayed by the pupil, or by the province from which he comes.

Higher education for the deaf is not a new idea, but on the contrary, as indicated above, has been in successful operation in the United States, and in some other countries, for many years. As early as in 1864 Gallaudet College was opened, which takes up both preparatory work similar to our High School matriculation course, and also University work, having been given degree-conferring powers by Congress. This College is largely supported by the Federal Government and is open on equal terms to students from all States of the Union. So the Government of the United States, by its encouragement and assistance to higher education of the deaf, has established a precedent which our Federal Government might well follow—must follow if Canada is not to lag far behind in so important a work and so imperious a responsibility."

Training Teachers of the Deaf

Provision is also being made to provide better training for teachers of hearing schools, especially in technical work, as witness the technical training schools already established and others that are projected; also various summer school courses that are available for teachers. But nowhere in Canada is any adequate provision being made for training teachers for the deaf, the most difficult of all educational work. *The Canadian* speaks as follows of the need of such a training course:—

"There is no other function of the state more important than that of providing adequate educational facilities for its children, and this includes not only suitable buildings and equipment, but also efficient and properly trained teachers. To such adequate educational facilities every child is equally entitled; and, quite obviously, the more a child is handicapped by any defect, such as deafness, the greater its need for a good education, and the greater the state's responsibility towards it.

"In order to give the deaf children the best possible education, competent teachers must be available, but it is a fact, almost incredible though it may seem, that no adequate provision is made in Canada for the training of teachers for this important work, probably the most difficult to acquire and efficiently carry on of all kinds of educational work.

"All the provinces, at a very considerable expense, now provide Normal Schools, and Schools of Pedagogy, for training teachers of hearing children, Ontario alone having eight of these schools. Such a course is deemed essential if we are to have efficient teachers, and no one questions the wisdom of such provision, or begrudges the cost. But if special training is needful for the teachers of hearing pupils, it is obviously much more essential for teachers of the deaf. An untrained teacher might do passably well in a hearing school, for all his experience as a pupil has given him a fairly good insight into the methods and processes of teaching normal children. But a new teacher of the deaf has had no such helpful experience, and is quite incompetent at the start, in fact has no idea how to make a start, especially in oral work, if left to her own devices.

"The psychology and mental processes of the deaf differ much from those of hearing children, so the methods of instruction employed must be radically different, especially during the first few years in school, even in instruction in language. But this, difficult though it is beyond what can be imagined by anyone who has had no experience in this kind of work, is yet relatively easy. It is the development of speech which is the most difficult part of the work, particularly in the lower grades; and to be able to do this successfully requires expert knowledge and a long course of study and training on the part of the teacher. Hence the obvious and very great need for a special training course for even normal trained teachers with successful experience in public school work, before they can become efficient teachers of the deaf. At present such special training can not be obtained in this country, so that any Canadians who wish to qualify as teachers of the deaf must go abroad for the necessary course—surely a condition of affairs that should be no longer tolerated in this country. It is true that in this School we carry on a pupil-teacher training course, and a very efficient one too, as probably do other Canadian schools, but this is quite a different proposition. Such teachers come as novices in the work and of course cannot acquire efficiency till they have been here for three or four years, no matter how capable they may otherwise be. Obviously the results obtained under such a system must be very considerably inferior to what they would have been if the incoming teachers had previously taken a thorough teacher-training course, and so were prepared to do efficient work from the beginning; but it is impossible under present conditions to secure trained teachers any place in Canada.

"We understand that a project is now being considered, and will probably materialize, for the establishment at Ottawa or some other central place of a training school for technical teachers for all of Canada, under the joint auspices of the Dominion and provincial governments. So the time is opportune for also making provision for a training school for teachers of the deaf, which is quite as important in its sphere, and fully as much needed, as a technical training school or our Normal Schools. Such a school, of course, could be carried on successfully only in conjunction with a regular school for the deaf, in order that the teachers in training can have the necessary observation and practice work.

"At present there is no need for more than one such training school in Canada. The number of teachers required in any one province is not sufficient to justify establishing a training school for that province only. If there were one such school for all of Canada, a competent professorial staff could be employed, and the work carried on much more efficiently and economically than could be done by each province separately. In fact the expense would be insignificant, as any good existing school plant would provide all the facilities required, except two or three extra normal teachers. This system would also result in the standardization of deaf education throughout the Dominion, and would very materially increase the efficiency of such education by providing a reserve of fully qualified teachers to fill all vacancies as they occur.

"Moreover, such a training school would have marked and very desirable economical results. When the vacancies that inevitably occur in some or all the various schools for the deaf in Canada are filled with untried and untrained teachers, the work in those classes cannot be efficiently carried on, so the pupils must either spend a longer time in school, or receive a less thorough education. It is quite safe to say that a ten-year course in a school where none but previously fully trained teachers are employed would produce as good results, other things being equal, as a twelve-year course in a school where all vacancies must be filled with untrained teachers; so in the long run the economy effected in money alone would more than offset the cost of the normal training class, not to mention the great economy in the lives of the pupils resulting from the shortened course, or the much more thorough education they would receive if the course were not shortened.

"We earnestly and urgently commend this project to the consideration of the government of Canada. We feel sure that they will see the obvious need for such a school and will be most willing to make the necessary provision therefor."

The Work of the School

The reports of Dr. Boyce, the attending physician, and Mr. H. J. Clarke, B.A., the literary examiner, are appended herewith. Both show the work of the school to be in a satisfactory condition. The health of the children on the whole has been good and the progress in the classes excellent. Mr. Clarke gave considerable more time to the work than in former years and inspected very thoroughly the work of the individual teachers and his report for the year will be of corresponding value.

Before closing this report I wish to thank you, Sir, and Dr. Colquhoun as well, for the courtesy and assistance given me during the year.

I have the honour to be,

Sir,

Your obedient servant,

C. B. COUGHLIN

Superintendent.

Belleville, November 1st, 1921.

PHYSICIAN'S REPORT

Belleville, Ont., November 1st, 1921

TO THE HONOURABLE R. H. GRANT, M.P.P.,

Minister of Education for Ontario.

SIR:

I have the honour to present my report on the health of the Ontario School for the Deaf for the session of 1920-21.

At the opening of the school the ordinary precautions of inspecting all the children were taken. Because of so much epidemic disease throughout the Province, and especially the presence of diphtheria, it was thought best to obtain throat swabs from all the children and attendants for bacteriological examination, when it was found that nine children were "carriers" of the germ. They were promptly quarantined until negative swabs were returned. Notwithstanding this precaution, about one month afterwards, we had a severe case of diphtheria, and between then and the middle of the following January we had twelve cases, mostly mild. During the epidemic swabs were again taken of all the children and thirteen gave positive results.

In November we had an outbreak of smallpox and chicken pox, both of a mild type. To prevent a general spread we vaccinated all children who had not been recently vaccinated. We had ten cases of smallpox and twenty-three cases of chicken pox.

With the above exceptions the general health of the School has been fairly good, the sickness being an average of what we have year after year. Of the more important cases I would mention, heart disease 2; rheumatism 2; typhoid fever 1; scarlet fever 3; pneumonia 1; bronchitis 10; chorea 1; tonsilitis 3; influenza 12; erysipelas 1; also a number of cases of gastro-intestinal disorders, anaemia and debility, skin diseases, middle ear disease, as well as minor accidents and injuries.

Among the staff and attendants we had some sickness but not of a severe nature, excepting a case of scarlet fever in an attendant.

Toward the end of the session our institution's nurse, Miss Coombe, was taken sick. She improved during the summer and returned to duty at the opening of the present session, but soon after suffered a relapse, complications set in and she became seriously ill. Though still very sick there is some improvement.

I have the honour to be,

Sir,

Your obedient servant,

W. W. BOYCE.

LITERARY EXAMINER'S REPORT

Belleville, Ont., May 12th, 1921.

TO THE HONOURABLE R. H. GRANT,

Minister of Education in Ontario.

SIR:—

I have the honour to present for your consideration, a report on my inspection of the Ontario School for the Deaf.

Having spent over three weeks in this inspection, I was able to go more carefully into the work of the several classes, than was possible on any former visit.

Organization

A year ago I reported five classes in the Manual Department. At present there are only three. Miss Bell who has been for many years associated with this school, has retired and Miss Brown has been transferred to the Oral Department. Sufficient pupils have been transferred to the oral department, to account for these two classes, and many of these transfers are doing well. In any event they are making as satisfactory progress as they would make in a manual class. There are three new teachers in the Junior Oral Department, Miss Ward, Miss Wilson and Miss Bradley, all of whom come from successful experience as Public School teachers, and who give every promise of becoming successful teachers of the Deaf. There has been no change in the Supervising heads of Departments.

Course of Study

The Course of Study has been under revision for some time. The revision has been completed so far as the Junior Oral Department is concerned, and is apparently quite satisfactory. The course in the Senior Oral Department is nearing completion, and should be equally satisfactory. At the request of Doctor Coughlin, I spent two half days with the committee having this work in charge, and while I may not have been able to assist them very materially, I personally gained information that will be of service to me should I again be called upon to inspect this school. As reported several times before, this school follows as nearly as possible, the course laid down for the Public Schools of the Province, and the present revision has for its object, the stressing still further, if it is possible, the subject of language, which is the great problem in deaf education. It is absolutely impossible for any one who has not carefully studied these children to appreciate the difficulties that confront the teachers in the early stages particularly. The hearing child comes to school with a fairly good control of his mother tongue, that he acquired with little or no effort. These children come without a solitary word, having expressed themselves by signs, that express ideas but not words. Years of patient and careful teaching is necessary to bring these children to the stage where the hearing child begins in his school life, so far as a command of language is concerned. As in former years, that excellent idea of sending home with each child, a booklet containing the words that he knows and can use is being continued, so that parents who are willing to do so (and who is not?) may materially assist their children during the long vacation, by keeping up the children's knowledge in this respect.

Work Examined

I practically saw every class taking every subject on the curriculum, but it would not be necessary or profitable for me to give in detail all the work that I observed, but I can assure you, that the work continues to be of a high order of proficiency. I note too, considerable advance in the ability of the several classes to read the lips. Perhaps this is the most noticeable point in this year's inspection, and while it is highly important that as many as possible become proficient in speech, it is more important that they become expert lip-readers. During my inspection, I took the opportunity of getting from the two senior classes an original composition, on a subject on which they had no previous drill or preparation. I read the results with particular interest, showing as they did the great advance in the use of language from what I saw at my first inspection in 1908. I took occasion to show some of the essays to some of my Public School Principals, who

complimented them highly. Supplementary Reading is also being stressed, particularly in the upper classes, and the results are good. In fact I would pronounce the work good in all subjects, with the exception of Art, which is not being taught. It seems to me that this subject could be taken to advantage.

A new feature of the work, that appeals to the children, is rhythmic exercises. A powerful gramophone has been provided, and under the direction of Miss Ward a good start has been made. It can be seen already that there are great possibilities here with these children, and I am looking forward to seeing the results a year hence.

A year ago I referred to the teaching of language in the trade classes. I am pleased to report to you, that good progress has been made in this branch of the work and language is being made an integral part of the instruction in the various trades. While I was not directed to inspect the industrial classes, I did visit them, and I would like to say that in the carpenter shop I saw cabinet work that was done by the boys, that would do credit to any cabinet-maker. The shoe shop, printing office and bakery are also giving thorough instruction in these trades.

General Remarks

(1) The progress that is being made on the new building is of particular interest, for we can see the time approaching when the various classes will be able to meet in suitable class rooms.

(2) The organization is good.

(3) The teaching staff is composed in the main of very strong teachers, who are deeply interested in their work, and in their pupils.

I have the honour to be,

Sir,

Your obedient servant,

H. J. CLARKE,

Public School Inspector,

South Hastings, Belleville and Trenton.

PRESENTATION

To the Honourable R. H. GRANT, M.A.,

Minister of Education for Ontario.

SIR,—I have the honour to submit herewith the thirty-third Annual Archaeological Report of the Ontario Provincial Museum. Permit me to extend to you, on behalf of the Museum, our thanks for many favours received. Through your foresight, sir, that magnificent collection, made by the late Mr. G. J. Chadd, of Trenton, was secured. The price paid was nominal. Mrs. Chadd, with the true patriotism of a citizen of Ontario, desired that the life-work of her late husband should not go out of the province. This collection comprises many thousands of artifacts, and was the largest private collection in the Dominion of archaeological, biological, ethnological, mineralogical and historical relics. The archaeological and historical material represents not only the aboriginal life of the Bay of Quinte district, but also all the artifacts used by the first settlers in Ontario. For half a century Mr. Chadd devoted his spare time to adding to his collection, which, at his decease, filled a large building in Trenton. A special room has been arranged for it in the Museum. The biological and mineralogical gifts have been arranged for in their proper departments. Many other collections have been received and accredited in the usual place. The late Mr. Archibald McKenzie, of Guelph, bequeathed to the museum his fine collection of Indian artifacts.

I have the honour to be,

Sir,

Your obedient servant,

ROWLAND B. ORR.

Toronto, December 31st, 1921.

FOREWORD

The French dominion is a memory of the past; and when we evoke its departed shades, they rise upon us from their graves in strange, romantic guise. Again their ghostly camp-fires seem to burn, and the fitful light is cast around on lord and vassal and black-robed priest, mingled with wild forms of savage warriors, knit in close fellowship on the same stern errand. A boundless vision grows upon us: an untamed continent; vast wastes of forest verdure; mountains silent in primeval sleep; river, lake, and glimmering pool; wilderness oceans mingling with the sky. Such was the domain which France conquered for civilization. Plumed helmets gleamed in the shade of its forests, priestly vestments in its dens and fastnesses of ancient barbarism. Men steeped in antique learning, pale with the close breath of the cloister, here spent the noon and evening of their lives, ruled savage hordes with a mild, parental sway, and stood serene before the direst shapes of death. Men of courtly nurture, heirs to the polish of a far-reaching ancestry, here, with their dauntless hardihood, put to shame the boldest sons of toil.

“The Pioneers of France in the New World.”

Francis Parkman.

Central portion of Ontario showing the lines of migration of the principal Huron tribes.

Five years after the Jesuits had introduced their mission amongst the Hurons, viz., in the year 1639, they established Ste. Marie on the Wye as their permanent headquarters. In this way they completed the foundation of their Huron Mission; at the same time they defined, with the methodical skill and precision so usual to French efforts, its extent and subdivisions in their written annual reports (*Relations*), which have become one of the very few original sources of information about the Hurons. They prepared a diagram, also, giving the positions of their leading Huron mission stations about the same period, and it appeared as a small inset map in the *History of Canada* by Father DuCreux, published, however, twenty years later. There have been many reprints of this small map during the past seventy-five years, and its historical value can scarcely be over-estimated.

The Hurons, at this stage of their national life, consisted of several tribes that had been drawn or thrust together into the most remote and protected parts of the tract of land lying between the two southerly arms of Georgian Bay. Here they hoped to secure mutual protection against the Iroquois, who often attacked them. Taking up the Huron tribes, then, at this significant and almost final period of their history, one can quite easily recognize, with the help of some information about the country itself, and the Hurons' remains, the places of the several tribes, as then described, and co-ordinate them with the present topography. Almost the same arrangement of the tribes lasted down to the break up of the nation ten years later, and it will form the subject of the paragraphs which immediately follow.

BOUNDARIES OF THE HURON TRIBES.

THE BEAR TRIBE (*Attignauantans*). The territory of this tribe, the most westerly of the Huron confederacy, was sharply defined on all of its four sides. Portions of Georgian Bay formed two of these—Nottawasaga Bay, on the west, and Matchedash Bay, on the north. Along their eastern side, the river Wye separated them from other Huron tribes. Another natural boundary afforded them and the adjoining tribes a protection on part of the south side; this was Cranberry Lake and marsh, which extended up the Wye river to Orr Lake, five miles farther east, forming a wide, marshy tract, which protected the Huron tribes at the period above mentioned along their southern frontier. This important water system is indicated by the name of Lake Anaouites on DuCreux's map. The country of the Bear Tribe, therefore, coincided nearly with the boundaries of the present Township of Tiny, in which have been found, up to the present time, the remains of above one hundred village sites, large and small. In the territory inhabited by the Bear Tribe the largest number of villages

recorded by any writer of that period as having been occupied at once was fourteen, (Huron Relation, 1638, p. 38, Can. Edition, p. 39, Vol. XV, Burrows' reprint). Champlain mentions only five principal Bear villages in the same area, but it is not evident whether he meant this was the full number in existence at the time or that he counted only the largest of their communities, as minor villages always existed. The Bear Tribe constituted half of the Hurons, and their accent differed from each of the other tribes (Huron Relation, 1636). The majority of village sites found on clearing the forest in modern times in the Township of Tiny were Huron sites, as each village had to be moved every few years for sanitary reasons.

ATARONCHRONONS. This tribe dwelt east of the Wye River, while the territory of the Bear Tribe was west. Amongst them were Ste. Marie and the Mission of St. Louis. They inhabited central parts of the Township of Tay, in the present topography, and especially the parts of Tay near the arm of Georgian Bay called Matchedash Bay.

ATAUOTAENRATS. The Indian town of Scananaenrat, where the Jesuit missionaries had their mission of St. Michael, was one of the largest in the Huron country, and by itself comprised the entire tribe. It was on the main line of travel leading from the mission towns of the Bear Tribe in the Township of Tiny south-eastward to the two other inland tribes. The small map in Father DuCrenx's History places it at a short distance north-west of the small body of water, which is easily identified, and now known as Orr Lake; and there are extensive remains in the tract of land immediately north of this lake that correspond very well with the numerous references to St. Michael in the Relations. Here have been found, in a space about two miles square, traces of a large town and of half a dozen others, smaller but having similar kinds of relics. Patches of ground strewn with French iron tomahawks of that period—the signs of conflict—were common in this neighborhood, confirming the Jesuits' accounts of the battles of 1648-50, when 700 Huron warriors were quartered here in readiness, (Huron Relation, 1649, chap. 3), and suggesting other conflicts which these chroniclers had probably left unrecorded in the general confusion of that period. Several farms in the first concession of Medonte Township (lots 68 to 74 inclusive), in what appears to have been the immediate neighborhood of St. Michael, abounded, when first cleared of the forest, in this class of relics.

THE CORD TRIBE (*Alliguenonguacs*). This, and the Bear Tribe, were not only the most important, but the oldest of the Huron tribes, "having received into their country, and adopted, the others" according to Father Lalemant, (Huron Relation, 1639, p. 50, Can. Edition; p. 227, Vol. XVI, Burrows' reprint) and were able to trace their tribal history backward for two centuries. This (Cord) Tribe was the southernmost of the Hurons. One of its most important towns was Teanaustaye, located in what is now Medonte Township. Here was situated the Jesuit mission of St. Joseph, destroyed by the Iroquois in 1648. Their territory coincided with the central and northerly parts of Medonte Township at the period under consideration.

THE ROCK TRIBE (*Arendarhonons*). This was the easternmost tribe of Hurons. Sagard called them "nation de la Roche." They were the first of Hurons to engage in trade with the French, and regarded themselves as their special allies. It was with this tribe that Champlain spent the winter of 1615-16, at their vil-

lage of Cahiague, where, later, the Jesuits established the mission of St. Jean Baptiste. They dwelt in north-easterly parts of Oro, south-easterly parts of Medonte, and in Orillia Townships.

The foregoing boundaries of each of the tribal divisions of the Hurons, as they existed about the year 1640, are of fundamental importance in any investigation of the nation, and are given above according to the best evidence to be obtained. The descriptions of their locations will be useful in the subsequent sections of this article.

The name which the Hurons had for themselves—"Wendat" (Ouendat) is known in the present day in the more familiar form of "Wyandot." It was from the French alone they received the name "Huron", the origin of which is specifically traced by Father Lalemant. (Huron Relation, 1639, p. 51, Can. Edition; p. 229, vol. XVI, Burrows' Reprint). He tells us the name arose from the way in which they wore their hair in a ridge of bristles upon the middle of the head, resembling boars. (hures) and states that this is the most authentic origin of the name.

PHYSICAL FEATURES OF THE HURON TERRITORY.

The former dwelling-place of the Hurons is a series or succession of about seven parallel ridges of loose, superficial materials, each successive ridge rising higher than the last, and the final one, at the highest central parts of the country, attaining an altitude of some 850 feet above the level of Georgian Bay. These ridges, which doubtless cover and get their shapes from the rock foldings beneath, have an average distance from one another, from crest to crest, of about five miles. They are made up of all kinds of recent, loose formations of sands, clays, gravels and boulder stones, and run in a north-north-east direction conformably with the Alleghany or Appalachian foldings common to the eastern parts of the North American continent. They are of fundamental importance in the physiography of the district in relation to the Hurons, as they determined the directions of the Huron trails, the positions of their inland towns and villages, and many other matters of the first importance in Huron affairs.

So important a consideration, then, as the physical features, which governed the courses of travel and other matters, deserves attention at this early stage of the enquiry, especially with reference to each of the tribes, since, with a full knowledge of the physiography, the course of Huron affairs becomes more intelligible.

The surface of the Township of Tiny, which contained the Bear Tribe, is undulating, nowhere exceeding 500 feet above the level of Georgian Bay, and is divided in a general way into four of the above-mentioned parallel ridges, with watercourses between every pair of them. At the north, the ground rises rapidly as it recedes from the shore, around which there still remains a fringe of forest with trees of second growth and scrubby woods. Along the west shore of the Township, its southern half has a long reach of sandy land, lined with bleak sand-dunes, amongst which a stunted vegetation barely exists—a feature common to all of the south-eastern or leeward shores of the great lakes. Behind these sand-dunes, the soil of the interior improves as one travels inwardly, and an agricultural population of Canadian settlers now occupies and cultivates it.

In Huronia—the shaded portions show the position of the Huron inhabitants from the year 1640 until their expulsion.

It was on the higher, wooded ground of the ridges in these interior parts that the most southerly communities of the Bear Tribe, as their remains show, had their villages and clearings for corn patches when the Jesuits were among them.

Into Tay, where the Ataronchronous dwelt, the continuous high ground of the fourth ridge in the Township of Tiny extends. This ridge, along which trails could run, makes its nearest approach to the Georgian Bay at the head of Victoria Harbor. This locality, accordingly, was the commercial centre of the Hurons, as it has also been of later Algonquin tribes, and with much insight the Jesuits perceived this when they placed their headquarters of Ste. Marie near this part. In other words, the physical features of the district were such that Victoria Harbor naturally became the focus or centre of the Huron population which had become established on the seven ridges, several trails radiating from the head of the harbor in as many inland directions along the higher ground. It appears to have been this very same centre, the heart of the country, that was smitten in 1649 by the Iroquois, otherwise the Hurons would not have deserted their country so precipitately after the capture of two of their villages, if these villages had merely been of the ordinary unfortified kind, and situated in an area of small importance to the whole nation. Two more of the ridges, or rather the ends of two, which come out of Medonte Township, complete the surface of Tay Township. The Atahotaenrats enjoyed, as already seen, the protection on their southern side of the water system that included Orr Lake, which is shown in DuCreux's map, and out of which the Wye River flows through wide, flat lands unsuitable for Huron occupation. The land which the tribe actually occupied northward was higher, and better suited to their agricultural habits; it formed the inner end of the fourth ridge in the Township of Tiny.

Of the four well-defined ridges of Medonte Township, which are separated from each other by three sharply-cut valleys containing large streams, three of the ridges have been already mentioned in connection with the preceding tribes and townships. In this township the Atahotaenrats occupied the ridge which merely touches the north-west corner of Medonte, in which some of their habitations appear to have been placed, as already pointed out, while on the southerly ends of the next two ridges, which also pass into Tay, the Cord Tribe lived entirely within Medonte. At some time prior to the period now under consideration, this tribe had sojourned or passed over the westerly half of Oro Township, leaving it much bestrewn with the remains of their villages of a former time.

On the fourth ridge of Medonte, at its north-easterly end, lived part of the Rock Tribe. Their other abodes, at least the sites of most of the Rock Tribe villages, were in north-eastern Oro, in the vicinity of Bass lake, where a large number of village remains have come to light. The land of the interior reaches its highest altitudes in the westward parts of Oro, descending a little toward the east where Bass Lake lies. Still further descents take place toward Lake Couchiching, which bounded the Rock Tribe on its easterly side.

THEIR INLAND TRAILS THROUGH THE FORESTS.

No feature of the Huron occupation is more important than their system of forest trails. The word "trail," as used here, means a path, (more or less unbeaten), through the high, open woods, and used by the Indians in going from one village to another, and to their fishing and hunting grounds.

The rivers and streams in the intervening valleys between the ridges, with their marshy margins, were not passable for the trails and this obliged the Hurons to use the ridges for the purpose of travel. The occurrence of different kinds of forests also compelled them to select and follow routes where the woods were open and free from underbrush. In the low ground of the valleys evergreen thickets checked their progress, as these were less open and passable than the open woods on the higher ground where maple, beech and other hardwoods, with pines in some localities, grew upon the ridges, and where especially, the trees had lofty branches and the woods were more easily passed through. Cedar and other bushy woods, on the other hand, grew upon the swampy flats, giving more underbrush. As the ridges make up the bulk of the land area, the forest trails along their higher parts became practically the only kind in use by the Hurons.

In a similar way, throughout Scotland and nearly all countries that are not entirely flat, the earlier drive roads and bridle paths kept their courses along the higher grounds. These were probably the only roads used before Caledonia was cleared of its forests. Even the Roman roads passed along the higher grounds.

Perhaps the Hurons sometimes "blazed" trees along these trails as it was a common practice among Indians to mark trees with "blazes" when making a trail, but it is very doubtful whether they ever adopted any general system of marking them, as the Iroquois were pursuing them, so markings were inadvisable, and also because all Indians had good instinct in the woods. Everyone knew the topography of his own district—the slopes and courses of the ridges, the directions of the flow of the streams and belts of hardwoods and evergreens and other features.

A trail of the class just mentioned followed each of the ridges in Tiny, Tay and Medonte, aggregating seven in all, as already stated. These had a general direction of north-northeast. Another crossed them transversely, connecting these ridge trails together, as the trunk of a tree and its branches. The transverse trail was in reality, (and may be called) the Main Trail. Joining the ridges together, as it did, it was the most notable trail in the country. Beginning near Cedar Point in the Township of Tiny, it proceeded overland, one branch of it passing on to the "Narrows" of Lakes Simcoe and Couchiching near Orillia (a distance of about 30 miles), and it even passed beyond this place. Another branch went to Hawkestone on Lake Simcoe. Obviously it was this main, overland trail that Champlain followed, passing (by the first mentioned branch) Bass Lake where Cabiquag stood, and after him the Recollet and Jesuit missionaries followed it.

From the positions of important villages, from the compilation of data concerning the lands on which owners have found isolated relics at some distances from the traces of actual village sites, i.e. losses on what were the lines of travel, from the data furnished by early settlers of the trails used and kept open down to their own times, and from the topography of the ridges, it is possible to define the positions and directions of the original Huron trails and to lay down their locations on the map with some accuracy. Village sites have been found in sufficient numbers to show where the centres of Huron population were located, and how they were placed in relation to each other; and therefore, when these afford any evidence, how the trails ran.

Succeeding Indian tribes have preserved from obliteration this interesting class of Huron remains, viz., the same original trails that the Hurons used in

the early part of the seventeenth century. Various Indian nations in succession afterward kept them open down to the arrival of the white settlers in the nineteenth century. The trails which the Hurons travelled prior to 1649 were next travelled by the northern Iroquois, who, it is said, came into possession of the district after the Hurons. These, if they ever actually occupied Huronia, were in turn expelled from it by the Mississagas and Chippewas who were the next to follow the same trails which had been left open by their predecessors. The Chippewas continued to do so until they, in turn, retired to island reserves before the succeeding wave of white settlers. In completion of the proofs, the modern Chippewa Indians of the locality possessed traditions that the paths were used by their vanished Huron predecessors. Although Indian traditions do not prove anything, conclusively, yet they add a degree of assurance to what is otherwise known.

Some may doubt whether they were identical with the original forest paths of the Huron tribes, yet such is the case, as the remains of the Huron villages are situated at intervals along these trails; and numerous stone implements, French iron axes and knives, and other relics of the seventeenth century have been picked up in abundance near them.

The knowledge of the locations of the trails has also been derived in numerous cases from the pioneers of the district, who used them when other roads were wanting, before the present public roads were constructed through the forests, and in some cases of "trepas" roads they are still followed. It will thus be seen that successive races used the original courses of travel of the Hurons and indeed of perhaps still earlier races. Lumbering, agriculture and natural changes have almost succeeded in blotting out these ancient highways; but it is still possible to trace small portions of them in the patches of the forests that remain.

Apart from the system of ridge trails and their main, connecting, transverse trail which ran diagonally across the spine of the country, a trail overland to the Neutrals is worthy of mention. It left the district at the north-west part of Oro Township and passed the west end of Kempenfeldt Bay of Lake Simcoe. This was doubtless the trail by which Fathers Brebeuf and Chaumonot went in 1640 to the Neutrals.

There were other trails of importance in Huronia, but for the present it is not necessary for the purposes of this article to describe them in detail. Nor need anything be said now of the trails in those areas southward which the Hurons vacated before the period under consideration.

THE VARIOUS ACCOUNTS AND ESTIMATES OF HURON POPULATION.

This survey of the Hurons thus far having reviewed the territorial boundaries of the tribes at the most distinctive stage of their history, the physical features of the country they inhabited and their lines of travel through it, the enquirer is in a position now to examine the statements of those writers who treated of them before the years to which this article has hitherto had reference. Some interpretation of the former history of the Huron tribes will also be possible in the light of the statements made by those writers, especially the earliest of them.

Champlain and Father LeCaron, both of whom visited the Hurons in 1615, reckoned 17 or 18 villages, with 10,000 persons, though this may have meant adults. Champlain called all the Hurons he met—the Ochataguins; yet he altered this name to "Hurons" in the 1632 edition of his works, in keeping with the other

French writers of the period, and he also mentions the Rock tribe in Tome 4 of his work. Ochateguin seems to be the same name as Attignaouantans, or Bear people, which he thus applied to the whole Huron confederacy, although one modern writer has assigned to the name an origin of a different kind. The generic name spelled "Ouendat" (Wyandot), including the Bear Tribe (Attignaouantans) as one of the confederates, came into general use at a later date especially through Father Lalemant's Huron Relations of 1639 and 1640. Sagard spelled it "Honandate" in his Huron Dictionary (Paris, 1632). If the other tribes were in the district at the time of Champlain's visit, he overlooked their existence and differences from the Bear Tribe, as he makes no distinction in the case of the inhabitants of even the most easterly town of the district, Cahiague. Yet we know that people of the Rock Tribe (Arendarronons) were at Cahiague in his time, as these were said to cherish his memory twenty-two years afterward, (Father Lalemant's Huron Relation, 1640), although the same inhabitants may have shifted the site of their town a short distance away, in the meantime, as a sanitary necessity.

The work of Sagard, of the Recollet mission, entitled "Le Grand Voyage du pays des Hurons," (chap. 6, paragraph 4, Paris, 1632), says the country (pays) of the Hurons consisted of three regions or provinces, viz:—

Enarhonon (Renarhonon in his Huron Dictionary in the same work)

Atigagnongueha, and the

Atingyahointan, or the Nation of the Bears,

(in which names it is easy to recognize the same tribal names used later by the Jesuits). Sagard also says that in this extent of country there were about twenty-five towns and villages, (some of which were fortified with palisades), containing in all about 30,000 or 40,000 souls. (Sagard was among the Hurons in 1623-4, and his books appeared a few years later). Elsewhere, at a later time, (Relation, 1659), Sagard divided the Hurons into three tribes—the Cord, the Rock and the Bears, which correspond with the three he had enumerated in his earlier work.

In 1635 Father Brebeuf found the Hurons were divided into twenty villages forming a population of about 30,000 souls. (Huron Relation, 1635, p. 33, Can. Edition; p. 115, vol. 8, Burrows' reprint). Father Brebeuf also repeats the same fact in the Relation for 1636 (Huron Relation, 1636, p. 138, Can. Edition; p. 313, Vol. X, Burrows' reprint). Twenty villages, being a round number, may have been intended as an approximation, yet doubtless a close one.

Father Lalemant, in 1639, estimated 32 villages, etc., in the five territorial missions which the Jesuits had established, and this forms the basis of the enumeration and their distribution at the most representative period of their career, as we saw in a former part of this article. In Father Lalemant's census of 32 villages here given, he included 9 villages of the Tobacco Nation, and so 23 villages was the actual number of Huron ones, as compared with Champlain's 17 or 18, and Father Brebeuf's 20. (See Father Lalemant's Huron Relation, 1640, p. 62, Can. Edition; p. 127, Vol. XIX, Burrows' reprint.)

In Father Lalemant's Huron Relation of 1640 appears his census of the five missions to the Hurons, with the total of 32 villages, which, as we have seen, included 9 villages of the Tobacco Nation. (Huron Relation, 1640, p. 61, Can.

Edition; p. 125, Vol. XIX, Burrows' reprint). Then follows in succeeding chapters his more particular enumeration of the five missions:—

Ataronchronons	4	(Chap. 5, par. 1).
Attignenogna	3	(Chap. 6, par. 2).
Attignaouentan	13	(Chap. 7, par. 1).
Ahrendarronons	3	(Chap. 9, par. 3).
Tobacco Nation	9	(Chap. 10, par. 2).

32 villages.

It will be seen that in this enumeration of 1640 he omits the Atahotaenrats which he gave in the Relation of 1639, and which Father Brebeuf said spoke a dialect a little different from that of the Bear Tribe (Huron Relation, 1636, Burrows' reprint, Vol. 10, p. 11). In lieu of the Atahotaenrats he gives the Ataronchronons, and includes St. Michel, which was the sole town of the Atahotaenrats, in the mission to the Cord Tribe. The Atahotaenrats, although apparently subordinate in numbers, held a central position in the row of tribes, like the Onondagas in the original Five Nations of Iroquois, and were thus politically very important.

There is some historical evidence of migration into the territory of the Hurons, e.g., 600 Wenrohronons in 1638 (Huron Relation, 1639, p. 59, Can. Edition; p. 25, Vol. XVII, Burrows' reprint). In the Huron Relation of 1640, Father Lalemant further says:—"The remnants of several other nations have come to take refuge among the Hurons," but, on the other hand, he adds—"These villages and cabins were much more populous formerly, but the extraordinary diseases and the wars for some years past seem to have carried off the best of them." (Huron Relation, 1640, p. 62, Can. edition; p. 127, vol. 19, Burrows' reprint).

If Father Brebeuf's aggregate of 30,000 be an over-estimate, Father Lalemant's of 12,000 in 1639, on the other hand, may have been under the mark, because, while the latter is larger than Champlain's 10,000, it does not show much increase from migrations if allowance be made for the Tobacco Nation, in their nine villages, and so, at least, it must be a very conservative estimate.

Father Bressani, in his Relation of 1653, speaks of eight Huron "nations," (Burrows' reprint, Vol. 38, p. 283). This doubtless refers to the clans or gentes within the whole Huron nation. The clan is the fundamental social division amongst the American aborigines, and while political changes may bring about alterations in the names of tribes, yet amongst Algonquin and Huron peoples they resolve themselves fundamentally into the clan at last, and this is why we find the names of the Huron tribes constantly tending to become those of the clanship animals.

Father LeMercier, writing in 1660, says there had been from 30,000 to 35,000 Hurons, evidently following the former estimates in the Relations of earlier years.

From the foregoing seeming medley of tribal names and numbers of the tribes, it is possible to gather much information, a close scrutiny of which will throw light upon some of the ups and downs through which the Hurons passed during the 35 years in which the French writers who have been quoted had them under observation. There is no need, accordingly, to attribute inaccuracy to any of the statements quoted, although at first sight they may appear to contradict

one another. Thus Father Lalemant's census in the Huron Relation of 1640, (Huron Relation, p. 62, Can. edition; p. 127, Vol. 19, Burrows' reprint), in which he enumerates the villages at 32, and estimates 700 cabins, 2000 fires or about 12,000 persons, has every appearance of being reliable.

Another passage in Father Lalemant's Huron Relation of 1639 throws much light upon the fluctuations in the Huron tribes, and is deserving of careful consideration in this connection:—"In this small extent of country—situated to the east-southeast of a great lake, called by some 'fresh-water sea' (now Georgian Bay)—are to be found four nations, or rather four different collections or assemblages of grouped family stocks, all of whom, having a community of language, of enemies, and of other interests, are hardly distinguishable except by their different progenitors, grandfathers and great-grandfathers, whose names and memories they cherish tenderly. They increase or diminish their numbers, however, by the adoption of other families, who join themselves now to some, now to others, and who also sometimes withdraw to form a band and a nation by themselves." (Huron Relation, 1639, p. 50, Can. Edition; p. 227, Vol. 16, Burrows' reprint).

EVIDENCES OF FORMER HURON MIGRATIONS.

Father Lalemant's Huron Relation for 1640, as we have already seen, contained a revised, and doubtless corrected, classification of the Huron tribes by adding the Ataronchronons instead of the Atahotaenrats. His Huron Relation for 1639 also made a few important references to the traditional history of four of the tribes previous to, and about the time of, the coming of the French to Canada. This is almost the only authentic information of any extent gathered direct from the Hurons themselves on the subject of their origin. That writer's words regarding their former history are as follows:—"The general name, and that which is common to these four Nations, in the language of the country is Wendat; the individual names are Attignawantan, Attigneenongnahac, Arendahronons, and Tohontaenrat. The first two are the two most important, having received the others into their country, as it were, and adopted them—the one fifty years ago, and the other thirty. These first two speak with certainty of the settlements of their ancestors, and of the different sites of their villages, for more than two hundred years back; for, as may have been remarked in previous Relations, they are obliged to change their locations at least every ten years. These two nations term each other 'brother' and 'sister' in the councils and assemblies. They are the most populous through having, in the course of time, adopted more families; and as these adopted families always retain the names and memories of their founders, they are still distinct little Nations in those where they have been adopted—preserving thereof the general names, and community of some minor special interests, together with a dependence upon their two special chiefs, one of war and the other of council, to whom the public affairs of their community are reported." (Huron Relation, 1639, p. 50, Can. edition; p. 227, Vol. 16, Burrows' reprint).

Jacques Cartier, during his voyages to Canada in 1534-43, recorded vocabularies of the Indians he found at Montreal, Quebec and the lower St. Lawrence. These vocabularies show that the Indians spoke dialects of the Huron-Iroquois

language stock. The same Indians, which were agricultural tribes, and were at war with tribes dwelling to the south, did not live on the St. Lawrence when Champlain first visited the locality in 1608. Their remnants had doubtless moved farther west, as no traces of them appeared along the St. Lawrence.

Marc Lescarbot, in his *History of New France, 1609*, (Book 6, Chap. 24, Champlain Society's reprint, 1914, vol. 3, p. 268), after citing Champlain's account, adds explicitly, and doubtless correctly, that it was the Iroquois who exterminated the people of Hochelaga (Montreal), who had been seen by Cartier, and succeeding writers of the history of Canada have followed Lescarbot's account. The period of our written history, therefore, began after the struggle had arisen between Iroquois and Huron tribes, which resulted in the production of migrations of momentous importance.

In each of the tribal territories there are some characteristic remains which throw some light upon their former migrations. For example, a particular pattern of clay pipe occurs upon all the village sites which there is reason to believe belonged to the Cord Tribe. The patterns of pipes often signified the clan or the tribe to which the owner belonged, and so the relics of this kind become a source of information as to the localities of the tribes. It is true, however, that some of the tribes passed over, or sojourned upon, areas occupied later by some other tribe. In parts close to the area described as that of 1640, (i.e., the final disposition of the tribes), this consideration makes the question occasionally somewhat difficult. But farther from it, the lines of migration diverge more widely, the overlappings are fewer, and the courses of the migrations are accordingly more clearly discernible.

The pinch-faced (human effigy) clay pipe is another common pattern which throws light upon former migrations. It is found on village sites of the Tobacco Nation, and also on some sites of the Bear Tribe. As these two communities had formerly been at war with each other, (Huron Relation, 1640) the pattern in question establishes adoption of some portion of one of the tribes by the other, or some kind of migration relations between the two.

Throughout all the area defined as that of 1640, French relics are very abundant, being found at fully eighty per cent of the village sites. Such collateral evidence from their relics corroborates the former movements of the Hurons and the migrations implied in Father Lalemant's Huron Relation of 1639, already quoted. The present example of this kind of evidence, viz., the occurrence of clay pipes bearing particular patterns, seems to indicate the line of migration along which the two original tribes proceeded. Incomplete as this evidence from relics may appear to be, it corroborates the course of events indicated by Father Lalemant.

Another example of the migrations that often took place may be cited. The Wenrohronons had been a small tribe living somewhere near the eastern end of Lake Erie, and situated between the Eries and the Neutrals. According to the Relation for 1639, (p. 59, Can. edition; p. 25, Vol. 17, Burrows' reprint), this tribe was for some time allied to the Neutrals; but, some dispute having arisen between them, the Wenrohronons left their own country in that year and took refuge with the Hurons. The Relation for 1641 (chap. 6) mentions them as living at the town of Kihioetoa (St. Michel) in the Huron country.

There is also evidence of an influx from some quarter into the sheltered peninsula of N. Simcoe, between the years of 1615 and 1635.

The aborigines of any country are always found at the corner opposite to the point of entry of their invaders. This was the case with the early Keltic tribes of Britain, the Lapps of North Europe, the Basques of Southern France, and indeed with every race of conquered people known to history. It might therefore be expected that the Hurons would remove as far as possible from their enemies, the Iroquois; and it was in this position—thrust against the northerly limit of land adapted to agricultural pursuits—that they were found by the early French.

These inferences from historical considerations have been fully confirmed by the French relics from village sites, from which it is evident that a removal from the sites of the Counties of Ontario, York and S. Simcoe took place about the time the French first came.

The leading characteristics of the Hurons, and especially their agricultural industry, would lead one to suppose that they came originally from the plains. They built lodges of wood, however, which was not a custom that they could acquire in the treeless region of the plains. Yet even this custom could easily be a later acquisition, for the Indians readily adapted themselves to any new practice that might arise. As an example of this, the Spaniards introduced horses into America, and they became wild on the prairies. The prairie Indians soon brought them into their service and became much better riders and horsemen than the whites, thus proving that Indian habits can be readily adapted to new surroundings and circumstances.

All the evidence seems to point in a general way to the plains of the southwest as ultimately the former habitat, perhaps centuries earlier, of the Hurons, who were above all an agricultural people when compared with the indigenous Algonquins. Their burial practices resembled in part those of the Sioux, to whose language the Huron-Iroquois dialects also had some resemblance.

The late Horatio Hale, however, advanced a theory based upon linguistic inferences, that the Hurons came from the northeast in Quebec Province. ("Indian Migrations as evidenced by Language"—a paper read before the Amer. Association for the Advancement of Science, Montreal, 1882), but this view has not generally received the approval of students of the subject.

The migrations from the St. Lawrence valley, in the Province of Quebec, if such took place, (and as we have already seen it would appear from the earliest written historic records that there was some movement from the east as a result of the Iroquois raids), were in reality of minor importance in comparison with the great movement of the Huron-Iroquois speaking tribes from the southwest, which had brought the Hurons into Canada; and the numbers of the tribes afterward in Huronia who in all probability had reached there from the east were in a minority when compared with the numbers of the two original Huron tribes—the Bear and the Cord.

In historic times, Indians have frequently moved northward into Canada, viz., the northern Iroquois or Senecas in the 17th century, the Six Nations to the Grand River in Brant County, Delawares and Munsees to the Thames, Mohawks to Caughnawaga, St. Regis and the Bay of Quinte in the 18th century, and accordingly we may infer that in prehistoric times migrating tribes usually followed the same course. The earliest tribes, as the earth-works show, had reached this province around both ends of Lake Ontario. The Huron tribes, however, had been in Ontario long enough to become in blood nearly the same

as the Algonquin natives of the soil, and it was only in language that Iroquois and Hurons had any affinities with each other. But their period in Ontario had also been long enough to effect many changes in their language and customs.

OUTSTANDING FEATURES OF HURON VILLAGE SITES.

Along the sides of the ridges there are many raised lake beaches of former geological times, and the terraces which they left may be clearly seen. Everywhere we see these proofs that what is now land had formerly been lake bottom, and that this change from water to land took place in very recent geological ages. Although at first sight these raised beaches may appear to have little bearing upon our subject, at a closer examination they manifestly possess an intimate connection with the Huron villages.

Beside these old beaches in many places there are swampy patches, often quite narrow, but very wet from springs of water issuing at these lines. Here moisture is kept all the year round, and frequently the springs are so strong that they trickle out from the swampy tracts and form rills or rivulets, flowing onward to the rivers, and, in fact, producing them. It seems that when the old lake surface stood for a time at each of these marks, underground courses of the water were established, so as to let the drainage out of the ground at the level of the existing shore line. The process of forming other similar underground courses at lower levels was repeated as often as the water surface fell and made a new beach line. And now, after thousands of years (the lake level having in the meantime sunk some hundreds of feet lower), these old underground water courses continue to be the grooves in which the natural drainage of the land makes its escape. In other words, the springs have had a tendency to get into ruts, out of which it is not easy to shake them.

Almost invariably at the springs along these lines the Huron aborigines selected their dwelling places, and got their supplies of fresh water. And accordingly, the line followed by an old beach in nine cases out of ten becomes the line along which the inland Huron villages are situated.

Our own ancestors, before the invention of pumps or wells, lived in similar situations. Topley (*Journal, Anthropol. Inst.*, iii. 34-49) shows that in the south-east of England, "along the foot of the chalk escarpment, where the settlers found good water," there is a line of village communities; and that of 125 parishes along the Weald, no less than "119 belong to villages situated at the foot of the escarpment." This resemblance is a proof of the identity of the domestic needs of our own ancestors and the Hurons and not the effects of European (French) influence on Huron customs. To settle near where fresh water was to be found was an indigenous custom among the Hurons. Human needs are much the same in all ages and countries, and will compel widely separated races to act alike under similar conditions.

There is also another important feature of the village sites in Huronia, not hitherto indicated, and which, though highly important, will be merely alluded to in this place. The largest Huron village sites in the country are found there, and they are likewise post-French. It would appear from this that as danger from the invading Iroquois grew greater, the population became amassed into larger villages and towns for safety.

The favorite dwelling place of the Hurons on the hills, nearly always close to an old beach where abundance of spring water could be had, was of fundamental importance. Besides the better security to be found in hilly situations, there was, perhaps, something in the nature of the Huron tribes themselves that required their settlement on hills where the soil and the air were both drier than on the low ground. They always selected for their sites porous or sandy loam with natural drainage. The habitat of the Hurons upon the hills was thus well pronounced in its type. It differed widely from that of another earlier Indian race in parts of the same district, and was in striking contrast with the latter, signs of which occur especially along the lower waters of the Nottawasaga River, near Georgian Bay, the remains of the two races, however, being placed favorably for comparison.

The Huron villages were of all sizes. Those at which bone-pits occur were generally large. When compared with the villages of Europeans, or even with those of modern Indians, the large populations in Huron villages appear to have been huddled together in an extreme degree.

Some of the villages were palisaded. No traces remain of embankments, and it requires some examination to find the palisade of any particular site. But palisading may often be inferred from the position of the site on an isolated hill or on a spur. One cannot think the precaution of selecting a naturally fortified position would be taken without the construction of the palisade itself. Before the introduction of European firearms among the Indians it was desirable that they should build their fortified villages on hills and in high places, the better to secure protection. But since that introduction it has made little difference whether they kept to the hills or not.

THE HURON BURIAL CUSTOMS AND THEIR SIGNIFICANCE.

The Hurons practised burial customs partly similar to those of the Sioux tribes, thus completing their general resemblance to the Sioux and corroborating the other evidences of their western origin. This was especially true of burial upon scaffolds immediately after death.

In regard to the bone-pits for the ultimate burials, and their occurrence in the Huron area, a compilation of data between the years 1882 and 1902 showed a preponderance of the bone-pit class of burial in the two tribes described by Father Lalemant as the two original tribes of the Huron confederacy. Out of 58 village sites in the region occupied about 1639-40, as already defined, where the settlers had found bone-pits, 22 were at sites of the Bear Tribe and 11 others at sites of the Cord Tribe. This seems to establish a prolonged period of residence for these two tribes, just as Father Lalemant stated, and it also indicates, as these two tribes lived at the west and south extremities respectively of the row of Huron tribes, that they had come from those directions, and that the bulk of the Hurons had therefore migrated from the south and the west nearer the Sioux.

Not more than half a dozen sites with bone-pits have yet been discovered in any one of the other tribal areas. The collected data also shows that the other tribes had practised single burial methods for the most part. For example, there is an absence of communal burial pits in the east part of Oro Township where the Rock Tribe lived, and such pits are not numerous in Orillia Town-

ships, (N. and S.). This is also true of the sites in the Balsam Lake district, according to the researches of Col. Geo. E. Laidlaw. This would seem to establish some affinity between the Rock Tribe and the dwellers at the Balsam Lake sites, the Rock Tribe having perhaps moved from the Balsam Lake region to the west of Lake Couchiching at an earlier date.

The Atahotaenrat district also shows single graves. While this tribe, in the historic period, consisted of one town, it had perhaps been moved, like other Huron towns, every few years, for sanitary reasons, and with each of the sites in that tribe's territory, there is, instead of the usual communal ossuary or bone-pit, a cemetery of isolated graves. In this respect they also appear to have differed from the two leading Huron tribes, who adopted the ossuary mode almost to the exclusion of every other mode of burial. One small bone-pit, however, came to light in this tract in 1895 (Ont. Arch. Report, 1894-5, p. 42), yet among its contents there were relics of French manufacture.

For the most part Huron crania have a beautiful form, many of the skulls showing fine symmetry in their outlines. This is perhaps partly due to cradle-board compression in infancy. And here again we encounter another resemblance to the Sionan tribes who practised fore and aft compression of the infantile head, although their bandages produced more angular shapes than amongst the Hurons.

INTRODUCTORY REMARKS.

The early history of the exploration of our Province, and of the Indian tribes encountered by Champlain, Radisson, Nicolet, Perrot and the Jesuit missionaries to the Hurons and Algonquins, is full of fascinating pages, of pathos wedded to romance and to a religious heroism, unsurpassed in the annals of North America.

The rollicking, dare-devil *coureur de bois* or bush-ranger, the trapper, the romantic and daring explorer occasionally a man of courtly grace, of unsatisfied ambition and always of reckless courage, the voyageur and the fearless black-robed missionary consorting with the tribes, instructing, blessing, assuaging and expiring in their midst, have passed away. But the story of the courage of the trapper, the heroism of the explorer and the zeal, the self-effacement and sacrifice of the missionary will ever appeal to the imagination and awaken human interest while men continue to admire heroic efforts and applaud the deeds of the good, the noble and the brave.

When searching for knowledge on the names, the hunting grounds and characteristics of the sub-tribes and offshoots from the parent stock, Algonquin or Huron, our sources of information are limited. And to obtain this information we are constrained to examine every page of the letters or *Relations* of the early missionaries, who early in the seventeenth century dwelt with or visited the sub-tribes scattered here and there in what is now the Province of Ontario. Being men of trained intellect and observation these devout missionaries recorded their impressions of and experiences with the tribes in letters remarkable, under the conditions and circumstances, for clearness of expression and simplicity of style. Before we advance further in our study it will be instructive and interesting to learn something of the origin and the history of these missionary letters.

The practice of sending annual or semi-annual reports from foreign mission fields was inaugurated by St. Francis Xavier in the sixteenth century, when he made known to his friends in Europe the progress of his work and the condition of religion in India and Japan. He not only mailed, himself, most interesting letters from abroad but he recommended his brothers in religion to do so. Writing April, 1552, to Gaspard Baertz, who had charge of the mission at Ormuz, India, he requests him "to send letters periodically to the college at Goa, in which you will mention the various labors you undertake to secure the increases of divine glory, the methods which you follow and the spiritual results with which God crowns your feeble efforts." He also wrote June, 1549, to the same effect to Francesco Perez and Diego Pereira.

Four years after the first mission for the conversion of the Canadian Indians was opened in Nova Scotia, in 1611, Father Biard sent to France the first letter of the series known as *Les Relations de la Nouvelle France*.

The series were continuous, with occasional interruptions, down to 1673. However, the letters were not made public property until the year 1632, when the "Brèves Relations du Voyage de la Nouvelle France" of Father Paul Le Jeune appeared. From this time, down to October, 1673, Sebastien Cramoisy, the King's Printer at Paris, annually issued a vellum bound, duodecimo volume of the Relations. Altogether, Cramoisy published forty-one volumes. In 1858 the Canadian Government commissioned the Abbès Ferland, Laverdière and Plante to re-edit the Cramoisy series, collect all the scattered and independent manuscripts and revise them for publication. When they had accomplished their mission the reprint—now very rare—was published, 1858, by the authority and under the auspices of the Canadian government. These Relations were issued in French in three quarto volumes.

But the most complete and voluminous edition ever published was begun (1896) and completed (1901) by the Burrows Brothers of Cleveland, Ohio. This monumental work of seventy-two volumes was edited by the scholarly Reuben G. Thwaites, assisted by a corps of expert translators. In this edition are incorporated the original French, Latin and Italian texts with the English translations, and most valuable notes, portraits, maps and autographs. The title of this invaluable publication is "The Jesuit Relations and Allied Documents, Travels and Explorations of the Jesuit missionaries in New France, 1610-1791."

This brief condensation of the history of the *Relations* will give the reader an idea of the vast amount of letters written by the missionaries and will also show how scattered, until our own time, were the primary sources of information and how difficult it was in the past for students or even scholars to have access to them. It is impossible to exaggerate the value and authority of these letters when one has to deal with the character, habits and condition of the early tribes of our Province. "I should add," writes Francis Parkman in his preface to "The Jesuits in North America" "that the closest examination has left me no doubt that these missionaries wrote in perfect good faith and that the Relations hold a high place as *authentic* and *trustworthy* documents."

In their extraordinary bulletins the Jesuit missionaries seemingly omitted nothing of importance bearing on the mental, physical and moral qualities of Hurons and Algonquins. Their narratives and letters include essays on native manners, descriptions of the land, of the customs, religious rites and ceremonies of the tribes. In this incomparable collection are included dissertations on botany, geology, zoology, ethnology and on tribal languages and dialects. Their writings are of inestimable value to the students of prehistoric man in Canada and to scholars who have enlarged the sphere of research and who are now exploiting the aboriginal past.

We do not need to remind the reader that, practically, all we know of the minor clans hunting through the forests of Ontario in the sixteenth and seventeenth centuries is to be found only in the letters sent to France by the early missionaries.

Most of the minor tribes of Ontario which, in the sixteenth century formed, collectively, a numerous body, have either entirely perished or they are fast disappearing. It would be idle to search for the causes which doomed them to annihilation or contributed to the great reduction in their numbers. Doubtless

the gradual encroachment of civilized man upon their hunting grounds, their inability or unwillingness to conform to new and untried conditions, alcohol in the last century, tuberculosis, diseases introduced by trappers, hunters and traders and scarcity of game contributed with cumulative force to their almost total extinction.

Their numbers are decreasing year by year and as they are apparently unable or unwilling to conform to the ways of the white man, they will, in time, become but a memory. Before they entirely perish it is well to inscribe their names in our Provincial annals so that they may live in the memory of generations yet unborn.

THE ABITTIBI.

The Abittibi were an Algonquin tribelet who, in the time of Champlain, dwelt on the shores of Abittibi lake. Their name appears for the first time in the *Relation* of 1640. We again encounter them in the *Relation* of 1660, in which it is recorded that the Abittibi, and a band of Algonquins visiting them, were ambushed by an Iroquois war party and many of them slaughtered.

Chauvegnerie (1736) was of the opinion that the Abittibi who, in his time, were able to send one hundred and forty warriors against the enemy, were identical with the Têtes de Boule, visited by French traders early in the eighteenth century. Chauvegnerie is probably right when he classes the Abittibi with the Têtes de Boule, for the totem of the two clans, the partridge and the eagle, were the same.*

The Boules, the Temiskaming and the Abittibi had an interesting legend which accounted for the origin of man and told how the sun, moon and stars came into existence. They related a story of the flood which destroyed all men and animals, save the eagle and the partridge.

The eagle, as the tradition was handed down to them, was a witch bird. He could change himself at will and put his feathers off and on like a garment. When the flood had gone down he looked about for a mate of his own kind, but could not find one. At last, seeing a partridge, he turned himself into another partridge. Then he and the partridge mated, and from these two come male and female Indians, who increased in numbers till, in time, all the land was peopled with Indians.

In 1669 the Abittibi united with the Temiskaming and fought on the side of the French when, in 1691, the English General Schuyler attacked them. Noël Chauvin, the half-breed trader, records that when a band of Abittibi accompanied him to Iroquois Falls and for the first time saw a steamboat, they thought it was a living giant—a demon—and took to the woods. Coming back and again looking at it, they called it a fire canoe and cried out that it was carrying, to infect them, a smallpox manitou or some spectre of disease. To ward off the danger they pulled up certain native plants which they held before their eyes as they gazed

*The Tabittibis are one hundred warriors. They have for device an eagle with the partridge. At the mouth of the Temiskamingue there are twenty warriors and, at the head of the Lake, twenty domiciled. These Indians are what are called Têtes de Boule who, in the Northern country, amount to over six hundred.

New York Colonial Manuscripts IX, p. 1053.

The Abittibis and the Tetes de Boule came to this river (Ounepigon) also. Some have informed me that the first have for arms, the Partridge and the Eagle. I have already stated that they are in all one hundred warriors. Rel. p. 1054, B. Ed.

on the steamboat, believing the plants would protect them from the evil *oki*. They went wild over the phonograph when they first heard it and gave a beaver skin to hear a single tune.

When they gazed for the first time on a negro they advanced all kinds of theories as to what made him black and when they saw a man with a wooden leg they looked upon him with wonder. Another awful sight was a man with a wig who, they thought, had power to scalp himself and return the scalp to his head when he wished. But a still greater marvel was the storekeeper, who had a set of false teeth.

The warriors flocked to the store to see the man remove his teeth and their amazement knew no bounds when they wildly gazed upon him and saw him take out of his mouth a set of upper and lower gums and then throw them in again. Keronwe, head of the band, shouted in Algonquin to his companions, "This fellow is a sorcerer and ought to be killed." The Indians gathered from many miles to see this wonderful performance, and the storekeeper made a fortune out of his magic teeth.*

Infanticide was not uncommon among the Abittibi. Twins were believed to bring bad luck to the family and created a suspicion that the wife was not faithful to her husband.

When it could be done safely one of the twins was killed so that the husband might not know of the dual birth. The ordinary method of disposing of the child was to stuff its mouth with moss or grass, carry it by night into the woods and bury it. This was done by a female friend or relative of the mother.

The Abittibi are gradually fading away and in a few years will be but a memory. They number to-day, including half breeds, about two hundred and fifty souls.

THE AONDIRONs.

The Aondirons were a subtribe, Attiwandarons or Neutrals of the Niagara Peninsula. Their village was in a forest stretching well into the hunting grounds of the Hurons. *The Relation* of 1648-9 records that, in 1647, a band of Senecas, with whom the Aondirons were at peace, visited the village and were hospitably entertained by the Aondirons. That very night, when their hosts were sleeping, the Senecas fell upon them and slaughtered the men, women and children. There is no subsequent mention of them in the early records. The Aondirons differed from all other Neutral clans in their method of honouring their distinguished warriors. The Neutrals gave scaffold burial to all their dead, but when a great chief of the Aondirons, who had distinguished himself in an engagement with the enemy, was killed on the battlefield and his scalp or war lock unlifted, he was thought to be singularly favoured by some powerful protecting spirit. Wrapped in a rich blanket-shroud, his body was suspended from the highest branch of the loftiest tree in the forest. His face was painted a brown red to simulate life; his pipe and weapons were fastened to his shroud and his shield and war bonnet were

*Lake Abittibi, named from the tribe, is 833 feet above sea level. When, in 1686, De Troyes, with one hundred French Canadians, including the three Le Moyne brothers of Montreal, was on his way to attack the English forts at Rupert and Albany rivers (Hudson Bay) he passed up the Ottawa and, swinging northward to Lake Temiscaming, passed by a chain of small lakes and rivers to Lake Abittibi. Here, on his return from his victorious expedition, he built a small fort to form one of a chain of forts the French intended to construct between Montreal and Moose River. The Abittibi River, which De Troyes followed, unites with the Moose River, near the discharge of the latter into James Bay.

suspended from a convenient limb of the same tree. The tree holding the body was deemed to be sacred against intrusion of any kind for six moons. When the last of the moons had waned two warriors were despatched to examine and report on the condition of the chief's body. If the remains were intact, a council was summoned when the dead warrior was proclaimed to be a great spirit chief in the land of shades and the protector of the braves of the clan when engaged in battle with their enemies.

The Kichesipirini. This clan was known to the French missionaries and *coureurs de bois* as Algonquins, or savages of the Island. They were also called *Bataub de l'Isle* because their principal village was on Allumette Island. They were known among the Hurons as Ehonkehrononons. Father Gabriel Lalemant—Rel. 1639—always used their Huron name when he had occasion to mention them. They were closely associated with the *Weskarini* who dwelt a short distance below Allumette Island on the north side of the Ottawa river. The two probably formed one tribe, and the "Petites Nations" mentioned by Champlain possibly included both clans.* *Le Rivière des Petites Nations* derived its name from these Algonquins. In Champlain's writings and in the Jesuit Relations they are referred to as typical Algonquins, superior in intelligence to all other Indians encountered by the French, and were always classified honourably as Algonquins of the Island, a classification first introduced by Champlain.

Their position on the Ottawa river gave them a commanding influence with the Hurons and other western tribes. The river on both sides of their island was obstructed by dangerous rapids and falls and when the upper tribes, trading with the French at Montreal and Three Rivers, approached Allumette they were forced to land and carry their canoes and furs quite a distance to safe water. The Allumette Algonquins demanded and received toll, grudgingly, from the Huron and Ottawa traders passing down the river to the French fur posts.†

We read in the Relations that, in the year 1645, they struck a peace with the Onandagas. It is not recorded by whom the peace was broken, but, in 1649, the Iroquois invaded their territory and almost annihilated them. The remnant fled northward and the name disappeared from our early annals. They were probably received by their kinsmen the Ottawas, or the Ojibwas.

The Algonquins of Allumette retained a tradition of the Noachic flood closely affiliated with the Sioux legend of the great deluge. They claimed that in the beginning, the earth was inhabited by men and women of great size. They were so strong and swift of foot that when hungry they ran down a moose and, taking it under one arm, tore off a leg and devoured it as they ran. Because of their swiftness and great strength they never prayed to the great Manitou who made them and all things. When he sent thunder and lightning they laughed at them and had no fear.

Now the Great Spirit became angry with them and sent a great rain upon them. When the valleys were all flooded the giants retreated to the high lands.

*Mr. S. E. Dawson, however, contends that Allumette Island "was the stronghold of the greater Algonquins as distinguished from *La Petite Nation* who hunted near the site of the present capital—Ottawa." "The St. Lawrence," p. 268.

†"This Island is in the great River Ottawa, and the savages who inhabit are very haughty. The Hurons and the French now staying in the Huron country, wishing to come down here, pass first through the lands of the Nipisiriens (Nipissings) and then come alongside this Island, the inhabitants of which cause them every year some trouble, by demanding toll from all the canoes of the Hurons, Ottawas and French." Rel. Vol. XX, p. 275.

But when the waters threatened to cover these lands the men, and women carrying their children, fled to the hills and at last to the highest mountains. Now the rain still kept falling and the waters rising till the giants, having no place to go to, were all drowned. Then the rain ceased to fall and where the waters no longer covered the earth, the Great Spirit made a new race of men and women, but the men of this new race are smaller and weaker.

It appears, from Champlain's account and other early records, that the Algonquins of the Isle were the most trustworthy and intelligent of all the Algonquins met by the French. They never broke a contract made with the French officials, or traders. Their pledged word could always be depended upon. They belonged to that superior class of savages of whom Chateaubriand writes:

"We may safely affirm that the better specimens of savages are much superior to the lower examples of civilized people."*

The Monsoni. An Algonquin clan carrying the totem of the northern Ojibways. They are mentioned for the first time in the *Relation* of 1671. We learn, from the *Relation* of 1672, that they drifted to the north and were then domiciled near the mouth of the Moose River at James' Bay and were known to the traders and Hudson Bay trappers as the *Moose River Indians*. Charlevoix contends that the Monsoni and the Annonsonks who were present at the Great Council held, 1671, at Sault Ste. Marie, when the French claimed sovereignty over the vast region of the great Lakes, were one and the same tribe.

In 1693, a band of the Monsoni were settled on the west bank of Rainy River near where it flows into Rainy Lake. Their totem was the moose, which would lead us to infer that at sometime early in the seventeenth century, they had separated from the Chippewas of Lake Superior. They number to-day, all told, about 300 souls.

The Temiscamings. Early in the sixteenth century the Abittibi and Temiscamings formed, if we may trust Lahontan's statement, one tribe. They were friends of the French and fought with the Abittibi against General Peter Schuyler when he made war on the French in 1691. They are settled to-day at the head of Lake Temiscaming, and number about two hundred and forty, of whom one half, at least, are half-bloods or three-quarters bred.

An interesting legend has come down to us from the time the band first settled on the shores of Lake Temiscaming. The Lake is a delightful sheet of water and is shadowed and bordered by evergreen pines, by maples, quaking aspens and birch trees. In primitive times, before the axe of the timber cutter defiled its beauty, Lake Temiscaming was one of the most picturesque and beautiful inland basins reposing in a Canadian wilderness. Surrounded on all its shores by a luxuriantly wooded forest whose trees were morning and evening mirrored in its waters, the lake rested in a weird isolation and silence broken only by the cry of the loon or the swish of an Algonquin's paddle. It was the custom of the Algonquin camping on its western shore to assemble, at midnight, once every month when the moon was at its full. Then, after a sacrifice was offered to the manitou of the Lake, a spectral canoe filled with spirits of the departed warriors

*Mr. A. F. Hunter, M.A., Treasurer of the Ontario Archaeological Society, who examined the remains of former Algonquin villages on the Ottawa River and its tributaries, is of the opinion that members of the clans of the *Weskarini* and *Kichesipirini* dwelt for many years in the present county of Renfrew. Quite an interesting exhibit of relics found in that county is now under glass in our Provincial Museum, Toronto.

of the tribe left the eastern rim of the lake and, crossing to the west, gazed for a few moments on the assembled warriors, then, dipping again their paddles, disappeared from sight.

The spectres spoke not, they stirred not, they looked not around but earnestly gazed on the living. They sat rigid and silent and when spoken to answered not a word. So visibly did the great canoe and its ghostly occupants appear that the faces of the dead warriors were plainly distinguished and relatives and friends were recognized. For many moons, the ghosts, always sailing from the east, were seen by the living standing on the western shore.

When, in 1686, De Troyes and his voyageurs camped for a day on the eastern shore of the lake, the phantom canoe and its ghostly warriors were seen no more.

Night after night for many months watchers waited on the western shore but no canoe appeared. A council of the tribe was summoned at which shamans, autmoins, war chiefs and patriarchs assisted. Then after a long silence the calumet—the pipe of peace—was passed around. When all had smoked, Piskaret, shaman of the tribe, arose and said:

“War chiefs, autmoins, warriors all, our dead will never be seen again. The coming of the white man has cast a spell upon the waters and the spirits which came from the Happy Hunting Grounds will never again appear, for they know that the white man will return soon, possess our lands and drive us onward to where the sun, every night, passes from our sight.”*

KEINOUCHE

A subtribe of the Ottawa—so-named from *Kinozha* (‘Pickerel’). The Jesuit Relation of 1640 locates them under the name Kinouchepirini south of the isle of the Algonquins in the Ottawa river. This would place them, if taken literally, some distance east of Lake Huron. The Relation of 1643 which places them on Lake Huron is probably more nearly correct. In 1660 when visited by Father Menard they were at Keweenaw Bay, Mich. They returned to Mackinaw in 1671 and from there moved to Manitoulin Island. This family in its wanderings illustrates the characteristics of many of the Algonquin subtribes. Algonquin bands travelled from the extreme east of the American continent to the Rockies in the west and from the head waters of the Saskatchewan in the north to the head waters of the Gulf of Mexico. These wandering bands were usually free from attack and were allowed to go from one tribe to another unimpeded.

AMIKWA

An Algonquin tribe so-called from *amik*, ‘a beaver.’ They were first known to the early French travellers when they resided on the north shore of Lake Huron

*There is a striking similarity between this Algonquin legend and that of the French Canadian *La Chasse Gallerie* which furnished the poet Drummond the suggestion for his “Philorum Juneau.” Once every year, on New Year’s Eve, a phantom canoe bearing the souls of the *voyageurs* who had perished in the *pays d’en haut*—in the northwest—visited Three Rivers. As the canoe floated over Montreal the spectral *couriers de bois* sang of their forest loves and as it approached Three Rivers the spectres, before descending, chanted “Le Canayan Errant,” the favorite song of the *voyageurs* and *couriers de bois* or forest rangers. After Quebec surrendered to General Wolfe the phantom canoe and its ghostly occupants were never again seen by mortal eyes.

opposite Manitoulin island. They are mentioned in the Jesuit Relations as Amikouai as early as 1636. In 1673 they claimed to be allies of the Nipissings and in the early days before the advent of French traders they were reported to have rendered themselves masters of all the other tribes in these quarters. At this time they inhabited the shores of Lake Nipissing, but as with many other tribes, diseases introduced by the traders decimated their numbers and soon the ever-conquering Iroquois compelled the remainder of the tribe to betake themselves to the south shore of Lake Superior and to Green Bay in Michigan.

ACHILIGOUANS

An Algonquin Indian band, which between 1640 and 1670 resided on the north shore of the Georgian Bay and in the Relation of 1670 they are said to have been attached to the Jesuit mission at Sault Ste. Marie, but the strong probabilities are that they only went there to fish. They were possibly a Nipissing band; their trade relations were largely with the Crees. Hewitt thinks the Naskasinik mentioned in the Relations for 1657-58 may possibly be the same as the Achiligouans. In the Relations they are given as a division of the Ottawas.

NOPEMING

A northern branch of the Chippewa who resided in New Ontario north east of Lake Superior and west of Lake Nipissing. They were known to many of the surrounding tribes as men of the woods. In the early days when undaunted *coureurs de bois* and indefatigable priests of the Jesuit order visited them they were known to frequently resort to the Sault for the purpose of securing food.

NIKIKOUK

This little known Algonquin subtribe formerly dwelt east of the Missisauga among the rock caverns on the north shore of Lake Huron. They usually, like other bands, deserted their camp sites twice a year to hunt and fish along the lake for sturgeon and other fish. When, in 1653, an Iroquois war-party composed of 120 warriors made an attack upon them and their allies the Saulteurs and Missisaugas, the Nikipouk were almost annihilated. Thus we see that Iroquois warriors in those early days penetrated through New Ontario as far as the Sault.

MARAMEG

(from *Man-um-aig* Chippewa for "catfish.")

At the dawn of Ontario history this band resided in the upper lake region and were even then undergoing a process of disintegration. Dablon gives the first notice of them in the Jesuit Relation of 1670, at which time he states that they resided on the east portion of the north shore of Lake Superior, and were then in close union with the Saulteurs or Chippewas of the Sault. They are mentioned under the name *Malamechs* in the Procès-verbal of the Prise de Possession in 1671 as being present at the great conference on that occasion.

The Masks or False Faces of our Ontario Indians.

Back to the ages at whose birth we can only guess, back to the centuries when the Hittite Empire was at the zenith of its power, back to the time when the vast pyramids and palaces of Central America were vying in magnitude and splendour with their sister structures in Egypt, back to the time when palaeolithic man, in the caves of southern Europe, was making his rock paintings and illustrating masks—since these remote eras the use of masks has been the common property of all nations and tribes the world over. Their origin can only be dated back to the first histories of man—probably carried from the earliest civilizations of the far east and Asia Minor to the Island of Atlantis, and then transmitted to the various nations of the western hemisphere.

The primal use of masks is very uncertain. In the days of palaeolithic man the mask was used very extensively for the purpose of deceiving the animals they were hunting, and thus they more readily secured their game. As ages went on, the mask was used to shield the face, then, in addition to this, it became a religious and then a theatrical necessity. The North American Indians adopted ferocious looking masks, which were supposed to frighten their enemies, and special devices were invented for the purpose of heightening the warriors' terror-inspiring powers, until the defensive idea was all but obliterated.

Dall, in the Bureau of American Ethnology, states that "with the advance of culture, in its feeble beginnings, humorous perceptions are well known to be of relatively slow development. However, we can perceive that, with the growth of supernaturalism, the emblem of the hero, already merged in the hero-myths, would, from the first, be associated with any formal recognition by the community of its relations to the supernatural. Thus masks would take their place among religious paraphernalia, not only of the community in its general direct relations to the supernatural, but in the probably earlier form of such relation through an intermediary individual, in the form of a shaman or his logical predecessors in culture."

Worship, as we understand it, is not a proper term to use in the description of the Indian's methods of approaching his supernatural beings. It involves much which is unknown to him and implies the existence of that which is foreign to his conceptions. Still, until some better nomenclature, more exactly defining his methods, is suggested, these terms, from their convenience, will still continue in common use. The use of the mask was general amongst the American Indians from Patagonia to the Arctic Circle, even the enemies amongst the ice-bound regions of the north had their own peculiar forms of masks. The Peruvians of South America apparently used masks from much the same motives as prompted their use in Mexico and amongst the various tribes of North America. The

origin of the use of masks among our Indian tribes dates back to pre-historic times, and like the flint arrowhead and knife, the stone axe, and other artifacts found amongst all the early tribes the world over like conditions and wants produced similar articles, or else one great centre, of which we now know nothing, may have been the great distributing centre for the dissemination of the knowledge of how these articles were manufactured and the uses they were applied to. Amongst all our Indian tribes in Ontario masks were used largely for ceremonial purposes chiefly amongst the Hurons, Tionmontates and Attiwandaron; but not to such a great extent by the various Algonquin tribes, who occupied the northern portion of this province (Ontario). The Iroquois made use of masks very extensively and even to this day they can be seen on the reserve at Brantford.

Lewis H. Morgan, writing in reference to masks, states—"The tendency of the Iroquois to superstitious beliefs is especially exemplified in their notion of the existence of a race of supernatural beings, whom they call False-faces. This belief has prevailed among them from the most remote period, and still continues its hold upon the Indian mind. The False-faces are believed to be evil spirits, or demons, without bodies, arms, or limbs, simply faces, and those of the most hideous description. It is pretended that, when seen, they are usually in the most retired places, darting from point to point, and, perhaps, from tree to tree, by some mysterious power; and possessed of a look so frightful and demoniacal as to paralyse all who behold them. They are supposed also to have power to send plagues and pestilence among men, as well as to devour their bodies when found, for which reason they were held in the highest terror. To this day there are large numbers of the Iroquois who believe implicitly in the personal existence of these demons.

"Upon this belief was founded a regular secret organization, called the False-face band, members of which can now be found in every Iroquois village both in Ontario and New York State, where the old modes of life are still preserved. This society has a species of initiation, and regular forms, ceremonies, and dances. In acquiring or relinquishing a membership, their superstitious notions were still further illustrated, for it depended entirely upon the omen of a dream. If any one dreamed he was a False-face (*Gá-go-sá*), it was only necessary to signify his dream to the proper person, and give a feast, to be at once initiated; and so any one dreaming that he had ceased to be a False-face, had but to make known his dream and give a similar entertainment to effect his exodus. In no other way could a membership be acquired or surrendered. Upon all occasions on which the members appeared in character, they wore masks of the kind represented in the figure, the masks diversified in color, style, and configuration, but all agreeing in their equally hideous appearance. The members were all males save one, who was a female and the mistress of the band. She was called *Gá-go-sá Ho-nun-nas-tese-tá*, or the "Keeper of the False faces;" and not only had charge of the regalia of the band, but was the only organ of communication with the members, for their names continued unknown.

"The prime motive in the establishment of this organization was to propitiate those demons called False-faces, and, among other good results, to arrest pestilence and disease. In course of time the band itself was believed to have a species of control over diseases, and over the healing art; and they are often invoked for the cure of simple diseases, and to drive away or exorcise the plague, if it had

Lower ones made of corn and used in Cornplanters' Ceremony.

actually broken out in their midst. As recently as the summer of 1849, when the cholera prevailed through the continent, the False-faces, in appropriate costume, went from house to house at Tonawanda, through the old-school portion of the village and performed the usual ceremonies prescribed for the expulsion of pestilence.

"When any one was sick with a complaint within the range of their healing powers, and dreamed that he saw a False-face, this was interpreted to signify that through their instrumentality he was to be cured. Having informed the mistress of the band, and prepared the customary feast, the False-faces at once appeared, preceded by their female leader and marching in Indian file. Each one wore a mask, or false face, a tattered blanket over his shoulders, and carried a turtle-shell rattle in his hand. On entering the house of the invalid, they first stirred the ashes upon the hearth, and then sprinkled the patient over with hot ashes until his head and hair were covered: after which they performed some manipulations over him in turn, and finally led him round with them in the "False-face dance," with which their ceremonies concluded. When these performances were over, the entertainment provided for the occasion was distributed to the band, and by them carried away for their private feasting as they never unmasked themselves before the people. Among the simple complaints which the False-faces could cure, infallibly, were nose-bleed, tooth-ache, swellings, and inflammation of the eyes."

Amongst the Hurons masks were in common use most frequently for ceremonial purpose: vol 13, p. 263 Jesuit Relations, describes a dance "performed for the recovery of a patient. All the dancers were disguised as hunchbacks, with wooden masks which were altogether ridiculous, and each had a stick in his hand. An excellent medicine forsooth! At the end of the dance, at the command of the sorcerer, all these masks were hung on the end of poles and placed over every cabin, with straw men at the doors, to frighten the malady and to inspire with terror the demons who made them die. Their purpose was, according to what they told us after, to frighten the disease and put it to flight. In addition to those wooden or straw masks they frequently masked their faces by painting."

The Jesuit Relations, Vol. 5, describes the process as viewed by them. Le Jeune states that "there were some whose noses were painted blue, the eyes, eyebrows, and cheeks painted black, and the rest of the face red; and these colours are bright and shining like those of our masks; others had black, red, and blue stripes drawn from the ears to the mouth. Still others were entirely black, except the upper part of the brow and round the ears and the end of the chin; so that it might have been truly said of them that they were masquerading. There were some who had only one black stripe, like a wide ribbon drawn from one ear to the other across the eyes, and three little stripes on the cheek."

Paul Kane, in his book "Wanderings of an Artist," spending, as he did, some years in the western and north-western prairie sections of British North America, crossing the Rockies and visiting many of the Indian tribes on the Columbian river and Pacific Coast during the middle of the nineteenth century, thus describes a mask dance in British Columbia amongst the Clal-lum Indians who resided where the city of Victoria now stands. "These Indians", he states, "have a great dance which is called 'The Medicine Mask Dance'; this is performed both before and after any important action of the tribe, such as fishing, gathering camas, or going on a war party, either for the purpose of gain-

ing the goodwill of the Great Spirit in this undertaking or else in honour of him for the success which has attended them. Six or eight of the principal men of the tribe generally medicine-men adorn themselves with masks cut out of some soft light wood with feathers, highly painted and ornamented, with the eyes and mouth ingeniously made to open and shut. In their hands they hold carved rattles, which are shaken in time to a monotonous song or humming noise, which is sung by the whole company as they slowly dance round and round in a circle."

Prof. Michaelis, in describing the shaft graves at Mycenae, states that the gold vessels found in them were so numerous as to justify the Homeric Fame of Mycenae, "rich in gold." A little gold sanctuary of Aphrodite, resembling a high altar with two doves thereon, contained some gold cups which graphically recalled Homer's description of the "Gold Masks," which, according to a widespread custom, covered the faces of the dead.

RED PAINT BURIAL IN ONTARIO

On the property of Mr. J. A. Harvey, known as "Harcroft Bird Sanctuary", situated on the west side of High Park in the city of Toronto—and immediately north of Grenadier Pond, there is a little bit of unspoiled wilderness very much as nature left it. Romantic valleys, the haunts of birds, towering prominences shaded with lovely trees, overlooking Lake Ontario's blue waves, a panorama of scenery sweeping the Humber Bay from the Island to the breezy points of Mimico and beyond. In January, 1921, on the brow of one of these high prominent sand hills, running south from Bloor street, while excavations were being made for a road, an ancient Indian ossuary was exposed to view. Mrs. Harvey graphically describes the finding of the bones. The weather being mild, road-making was early carried on. One afternoon, while the teams and scrapers were busily working around the roots of what eventually was discovered to be a stump of tremendous size, the men began to notice peculiar patches of red sand, which was particularly noticeable in the native white sand of the district, and underneath this stump the bones were unearthed. The skeletons were in the usual sitting posture so frequently adopted by Algonquins. There were in all about eight or ten skulls. Many of the long bones were much decayed, and the smaller bones of hands and feet were absent. Many of the skulls and bones, when they were exposed to the air, crumbled into dust. Two groups of smaller bones were found about thirty feet north of the group around the base of the stump; they, too, being surrounded by the same red patches of sand, and, likewise, about three feet below the surface. The workmen found nothing but a small pierced amulet and a copper artifact. There was also a lump of red hematite found among the bones. All of the bones were well covered with hematite mixed with sand. The question here at once arises as to the connection between the Red Paint People of the Penobscot valley in the State of Maine and the Red Paint mode of burial in this province. Moorehead is of the opinion that this culture developed locally and that it is very ancient. The graves opened in the state of Maine in no case presented any entire bones, the artifacts surrounding the bones with the red paint being all that was left. In a few cases small portions of the bone were found. In the Harvey site the bones were in a fair state of preservation—small bones all absent—many of the skulls were so old that they crumbled. The hematite was well mixed with the sand within the skulls. The bones found at a distance from the ossuary were also well covered with red hematite. The aborigines representing the Red Paint culture in the State of Maine seem to have selected a sandy or gravelly knoll or the end of a ridge, in which to deposit the osseous remains of their dead. Such was the case in this grave-yard overlooking Grenadier pond and Lake Ontario. Was this an isolated family who had made their way from the Atlantic seaboard to the western shores of Lake Ontario and carried with them the paint burial form of the ancestors? The burials took place long before Dekanawida and Hiawatha formed the league of the Iroquois—probably at a time when the Algonquin race had their camping and hunting grounds on the banks of the St. Lawrence and extending westward along the northern shore of Lake Ontario.

SCENE OF OSSUARY—"HARCROFT BIRD SANCTUARY."

The striking feature of this culture is the great preponderance of powdered hematite which, in the case of the cemeteries in Maine, seems to have been brought from the natural deposits near Katahdin in Central Maine. The artifacts found in the graves of the Red Paint People of Maine are quite different from the Algonquin artifacts. The utter absence of artifacts, common to Indian graves elsewhere in the United States or in Canada, is characteristic of these Maine sites. In them never have been found pipes, grooved axes, pottery, grooved hammers, bone implements, or the usual problematical forms and stone ornaments.

Fragments of bone have been found embedded in a mass of paint. Prof. Moorehead, in his article, says "my own theory, after opening two hundred and seventy of these graves, is that the "Red Paint" culture developed locally, that it is ancient, and that its origin will be difficult to trace." In his late work "Ten years of Archaeological Research in the State of Maine," just off the press, the professor says: "Various theories have been advanced as to the identity of the Red Paint People. The most obvious question is, naturally, whether they were the same people as the Indians who inhabited New England at the time Europeans first came here, and whose descendants still survive, namely—the Algonquins."

Prof. Moorehead further states in the same work: "The conclusions to be drawn from all these comparisons seems clearly to be that the Red Paint People did not merge with any other known culture to the east, the west, the north, or the south; that they are absolutely distinct and very ancient. Whether, as has been suggested, we might find a change or a merging into another culture in Nova Scotia, cannot be fully determined until explorations are carried into that quarter.

"If there is a similarity to be noted with the culture of any tribe known to history, it would perhaps be with the Eskimo. Some implements in use among this people suggest Red Paint influence. Hence if the writer were to theorize at all upon the question of what became of the Red Paint People, he would offer the suggestion that they moved northward and later became the Eskimo.

"As to the antiquity of these people stated in years, no one is able to set even approximate dates. In comparison with aboriginal interments in more than twenty other states where the author has explored, they appear very old. They have begun to fit into their geologic surroundings and do not appear modern in any sense of the word. No other graves have just such an appearance."

Parent Lands of our
ALGONQUINS
and *Hurons*.

By Very Rev. W. R. Harris, D.D., LL.D., Litt.D.:

PREAMBLE.

Before entering upon the study of the subject embodied in the title of this paper let us hurriedly and briefly consider the views advanced by authors and theorists to explain the origin of man in North, Central and South America.

Some writers, copying the "Responses Critiques" of Ballet, regard the American Indian as *autochthon*, or as human beings evolved from or separately created in America and independent of those existing at any time on other continents. Lord Kingsborough, in his preface to his voluminous and magnificent compilation "Antiquities of Mexico," was of the opinion that the aboriginal inhabitants of America were descendants from a remnant of a pre-diluvian race of men who came to America sometime before the great Noachic cataclysm. He contends that the American Indians constitute to-day the oldest race of human beings upon the earth. Plausible arguments and ingenious sophistries have been advanced to support the claims of priority of settlement of the Chinese, Welsh and Japanese. The French anthropologist, Campones, favoured an early Carthaginian colony, while Kercher and Huet contended that the Indians of America are of Egyptian origin. Sir William Jones pleads for an Asiatic origin, and some British and American antiquaries hold that the Indians are the sons and daughters of the lost tribes of Israel.

Humboldt in his "Essai Politique" was of the opinion that the Mexican Indians were the descendants of the Hiongnuos who, according to Chinese history, left China under their leader Pumo in the dynasty of Ghingis-Lu (A. C. 2000), entered Siberia and were never again heard of.

Malte-Brun after a minute investigation concludes that tribes connected with the Finnish, Ostiack, Permian, and Caucasian families, passing along the borders of the frozen ocean, and crossing over Behring's Straits spread themselves in different directions towards Greenland and Chili; and that other tribes allied to the Japanese and Chinese, proceeding along the coast, penetrated to Mexico.

Again we are confronted with innumerable volumes tracing the origin of the Indians to Canaanites, Phonicians, Mongols, Malays and Scythians. Many who have written on the subject are of the opinion that America received its first inhabitants from islands which lie between the extremities of Asia and America, that is to say from, Yezo, Gama's Land and other lands, including a cluster of isles, possibly the Aleutian Islands. All these suppositions are now relegated to oblivion and their ghosts will not presumedly walk again.

THEORY OF A SUBMERGED CONTINENT.

The theory of a submerged continent which, in past ages, was inhabited by a civilized people—a land which stretched across the Atlantic from Europe and Africa to America—is now admitted by many scientists to be the only satisfactory

solution of the problem involving the origin of the American Indian. Scott Elliott in his book—"The Story of Atlantis" accepts the theory of a lost continent and with Ignatius Donnelly in his "Lost Atlantis" and Henry Scharf in his "Origin of Life in America," supports his contention with very plausible, if not convincing arguments.

The study of ethnology and the search for Geologic truth is surely a noble occupation. But when that study is conducted upon severe principles, and with the aid of deep research, it will be found to combine the intellectual enjoyment of the mathematician, with the rapture of the poet and ever to open new sources of interest and delight.

While endeavouring to trace our Canadian Indians back to their cradle lands you will permit me to invite your attention to a description of these lands and their inhabitants before the daring Genoese sailed on his wondrous voyage of discovery.

THE ANCIENT CITY OF PALENQUE, CHIAPAS.

I well remember the evening hours I passed alone amid the ruins of the pre-Columbian city of Palenque, near the boundary of Yucatan. Everywhere around me were the gruesome memorials of a civilization and a religion which may have escaped the Noachic deluge, but had perished and passed away, as all civilizations and gentile religions, by a mysterious law of disintegration, vanish and disappear.

The repose, the stillness, the utter loneliness and abandonment of the dead city oppressed me with their burden of isolation and sadness. The sombre buildings—the abode of the scorpion and the centipede—the mutilated and wondrous statuary groups, where the cunning of the sculptor gave to the inert stone all the warmth and vitality of life, the shattered altars and fallen pillars, the utter silence and loneliness shrouding tablets, walls and columns, brought back to my mind memories of the ruined cities of Thebes, of Karnac and Babylon. But the changeless dark green of the foliage, the hue of the moss, and the gloomy shadings of the buildings of Palenque, wrap in sadness this ancient city in a shroud that only a tropic land and a tropic climate may weave.

The epigraphic signs on the tablets of stone, the unfamiliar stone faces, the hieroglyphic sculpture on sepulchral walls, and, above all, the heavy odour of decomposing tropical vegetation, separate this phantom in the wilderness from the fallen cities of all other lands, and give to it a character of its own and an entity unlike anything seen in Europe or in Asia.

Everywhere around me were ruins out of which came the tamarind trees stirred by the breath of the desert breezes and caressed by desert air, and no one, absolutely no one but myself, at that hour and in this weird and lonely place to contemplate the wreck and ruin of avenging time. Around me and upon all sides were heaps of ruins, ghastly in their sadness and loneliness for even the stone faces had a solemn sadness like unto the faces of mourners bereaved of their beloved.

These gigantic stones, the cyclopean walls, the colossal pillars were painful reminders of a race conquered by the foe, by plague, or annihilated by the vengeance of God. The volcano of Masaya, in the sister state of Guatemala, that for long years has been cold, is less majestic in the stern solitude of its crater than is this dead Palenque.

Stone figure on altar panel,
PALENQUE, CHIAPAS.

The Christian philosopher devoted to the study of the past or the future, the man of faith, or of science who gazes upon these melancholy remains as he wanders among these wrecks and ruins of time, studies the weird figures and looks upon the stony faces of the unknown dead, feels through his veins, nerves and arteries an emotion of terror and awe always produced by the oppression of desert solitude, or by the colossal remains of a buried and forgotten past.

This abandoned city, with its terraces and temples, its pyramids and sculptured figures of men and women, tells more eloquently than written history of the great antiquity of the primitive civilization of the American Indian. For anything we know it may antedate all the civilizations of Egypt and Ethiopia.

In the remains of many of the pre-Columbian cities of Mexico, Chiapas and Central America we behold the most elaborate examples of sculpture and stucco ornamentation adorning the altars, panels and walls of the buildings—the work of a people skilled in architecture, drawing and painting, and beyond doubt, excelling in arts that have perished.* In many of the halls still standing are arabesques, fashioned in mosaic, fret-work and delicate tracery not unworthy of a place in modern decorative art. Some of the sculptured figures are of heroic dimensions. The curiously designed reliefs, the unfamiliar figures of the altars, and the panel work on the inner walls of Copan are not surpassed by the temple specimens of Egypt and Assyria on exhibition in Paris and London.

The pillars and stone tablets which carry hieroglyphs are remarkably well executed. These pictographs or secret writings were executed in symbols or characters known only to the priests or learned men of the race.

We have not, unfortunately, been able to decipher them, so that the characters on the monuments of Copan, Palenque, Quirigua and Mayapan furnish us no data or information. The Maya system of symbolic writing appears to be a species of mnemonics or signs to aid the memory. The hieroglyphs on the Palenque tablets—now in the National Museum, Mexico City—are in perpendicular rows, and, for aught we know, the characters may be alphabetic and stand for a written language. On these tablets we behold a wonderful system of symbolism, and to interpret it, the Aztec or Mexican picture-writing affords us no help.

Apart from the accurate and familiar descriptions of many of the temples and great buildings left us by early Spanish writers, and of the art and splendour of Mexican structures, we have the testimony of Bernal Diaz de Castillo, the brave and rugged companion of the Spanish conqueror in his brilliant campaigns ending in the conquest of Mexico.

In Bernal Diaz' "History of the Conquest of Mexico" we find many surprising descriptions of wonderful buildings standing in the cities entered on the way from Vera Cruz to Mexico City. Of the city of Cempoal he writes: "we were surprised at the beauty of the buildings some of which had been lately plastered in which art these people are very expert." He speaks of large structures and fortifications of lime and stone and he adds: "Appearances demonstrated that we had entered a new country, for the temples were very lofty and the terraced dwellings and houses of the Caciques were plastered and whitewashed." Of the city of Cholula he tells us that it much resembled Valladolid in Spain.

*"It can hardly be doubted that these people were acquainted with many scientific instruments, strange inventions, compared with our own." Kingsborough, III, p. 128. "Architecture, sculpture, and painting, all the arts which embellish life, had flourished in this overgrown forest; orators, warriors, and statesmen, beauty, ambition and glory had here lived and passed away." Stephens-Yucatan, vol. I. p. 103.

It "had a hundred lofty white towers, which were the temples of their idols. The principal temple was higher than that of Mexico and each of these buildings was placed in a spacious court." Approaching the city of Mexico, he is moved to enthusiasm by the spectacle of its grandeur. "We could compare it," he says, "to nothing but the enchanted scenes we had read of in Amandis de Gaul, from the great towers and temples and other edifices of lime and stone which seemed to rise up out of the water.

"We were received by the great lords of that country, relations of Montezuma who conducted us to our quarters which were palaces magnificently built of stone, the timber of which was cedar, with spacious courts and apartments hung with canopies of the finest cotton. The whole was ornamented with works of art painted, and admirably plastered and whitened, and it was rendered more delightful by numbers of beautiful birds." While reading his "True History" as Diaz terms his book, we should remember that it was written at a time when there were those then living who knew the facts and could call attention to any exaggerations or errors made by the writer. His history was never impeached; its fidelity to truth was admitted by all contemporaneous and subsequent writers.

Having seen in Yucatan, Mexico, Guatemala and Honduras many of the remains of these prehistoric cities, we are satisfied that his descriptions are as true and his statements as reliable as those written in any of our accredited books of travel.*

As if to confirm the statements of Bernal Diaz, Herrera, one of the most reliable and accurate of the early Spanish historians, writes of Yucatan: "The whole country is divided into eighteen districts, and in all of them were so many and such stately *stone buildings* that it was amazing. In many of these edifices were carved the Figures of naked men, with earrings after the Indian manner, stone idols, images, tigers, vases and jars.†

Here is what Professor Hiram Bingham writes of the ruins of Meechu-Pichu, which he visited in the year 1911: "The ruins of this ancient city are on an almost inaccessible ridge, two thousand feet above the Terabamba river. They are of great beauty and magnificence, and include *palaces, baths, temples* and about one hundred and fifty (stone) houses. The huge blocks of *white granite*, some of them twelve feet long, were so carefully cut that they match perfectly. The walls have withstood the elements for *at least two thousand years.*"

Taking our information from the writings of these early and later eye witnesses we are presented with vivid photographs of these decayed cities as they

*Bernal Diaz del Castillo was born in Spain in 1493, and in 1514 accompanied Cordova in his first expedition to Yucatan. When Grijalva, the following year, also sailed for Yucatan Diaz was with him. He finally enlisted under the banner of Cortez and took part in the skirmishes and battles of the conquistador. He accompanied Cortez on his terrible march to Honduras. In 1568 he was appointed regidor (prefect or mayor) of the city of Guatemala. His *Historia Verdadera de la Conquista de la Nueva Espana* was published, 1632, in Madrid, 63 years after his death.

†Antonio de Herrera, the great historian, was born, 1549, in Spain. He was a voluminous writer of history, but his most important work was the *Historia General de las Indias occidentales*. It covers the time from the landing of Columbus in 1492 down to 1554, thirty-four years after the conquest of Mexico. The history is in five folio volumes and records for a period of sixty years the facts associated with the conquest, colonizations and missionary labours of New Spain. It is the most erudite, accurate and complete record of these early times. Herrera collected a vast amount of information, taken from the most authentic sources, on the manners, institutions and customs of the Indians. The history, translated from the Spanish by John L. Stephens, may be consulted in any large library.

Colossal Statue and Hieroglyphics.
COPAN, HONDURAS.

were in other days, with buildings of lime and stone, moulded and carved figures of their gods, courts, strong walls, sculptured figures and elaborate ornamentation.

In the libraries of Dresden and Vienna are preserved the drawings of the figures, hieroglyphics and faces made from the monuments and tablets which escaped destruction. Many of these drawings, with early Mexican manuscripts, are reproduced in Humboldt's works and in the "Antiquities of Mexico," the magnificent compilation in nine large volumes by Lord Kingsborough.

THE PHANTOM CITIES

Mournfully beautiful are the ruins of the cities of Copan, Uxmal, Palenque and Quirigua, surrounded by forests painful in the duration and intensity of their silence. They are phantoms in a wilderness shrouded by a luxuriant tropic vegetation. When we demand of the Indians we meet lingering near the ruins, to tell us how many centuries have passed away since the quarry was opened to obtain stones for the buildings; how long was the city inhabited, and when, and why was it abandoned, there comes no answer to our questionings.

If, as it is conceded by students of Central American history, the Quiches preceded the Mayas and another race antedated the Quiches and built the cities, temples and halls whose colossal remains are found all over Central America, Yucatan and Mexico, what assurances have we that many civilized communities did not successively appear, run their course, and perish in the veiled ages of prehistoric times? And by prehistoric times, I mean the ages between the creation of man and the beginning of authentic history. In order to account for the splendour and magnitude of the temples and public buildings of these cities, a centralized form of government must have existed. These wonderful structures could have been erected only by the expenditure of great labour—probably slave labour and under a highly organized system of superintendence. Possibly the government was an imperial autocracy, or it may have been like unto that of Greece, which was in religion and language one nation though, politically, a confederacy of sovereign states. The architecture and system of writing of these vanished people are different from those of any known race of men, ancient or modern. They are of a new order and are entirely and absolutely independent creations. They stand alone, without models or masters from abroad; their architecture originated among themselves. Their culture and refinement were not borrowed from Europe or Asia. They were a distinct, a separate people, existing apart from and independent of other continents, and apparently indigenous, like the animals, plants and fruits of the soil.

No analogies of art or culture assimilate the ancient civilization of America with that of any known people. Their structural designs and ornamental embellishments were their own and yet the remains of their great buildings at Uxmal in Yucatan, Quirigua, Guatemala, Copan in Honduras, the Mitla in Mexico are, to-day, as imposing and of as high an order of architecture as are those of ancient Egypt and Assyria. These primitive people built aqueducts, constructed causeways and laid many miles of paved roads. The immense ruins which the Spaniards discovered in Mexico and Central America and particularly in the riverine lands of Columbia and Uragua, the highways cut, in many cases, through stubborn rock, or constructed of enormous blocks of stone, all these with the remarkable remains of ancient canals involving great feats of engineering,

Ruins of Prehistoric City of Uxmal, Yucatan.

prove conclusively the high plane of material civilization which these mysterious people reached. Considering the age in which these people lived, perhaps no better proof of their advanced civilization can be adduced than their methods of calculating time. The Mexican Calendar stones, now on exhibition in the National Museum, Mexico City, demonstrate the actuality of Aztec or Toltec civilization through their unique system of counting time.

Their civil year, consisting of 365 days was divided into eighteen months of twenty days and five intercalary, or supplementary days. For the ordaining of their religious or ceremonial days they had a system which, by means of a cycle of fifty-two years and a wonderful method of computation, correlated with one another the civil year and the astronomical year. And this was done by adding thirteen days at the end of the cycle.

Humboldt was of the opinion, that the names of the days of a month, divided into four weeks of five days, were borrowed from an early Zodiac formed of 27 or 28 lunar months, used from a remote antiquity in India, Thibet and Tartary.

There can be no doubt but that the calendar of these people indicates an accuracy of observation and an astronomical knowledge far superior to the scientific skill of the semi-barbarians living at the time of the Spanish conquest. Their civilization was then descending, or had already descended, to barbarism. That the ancestors of the Mayas, the Quiches and Aztecs were familiar with the causes of eclipses we know from their astronomical maps which show the disk of the moon projected on that of the sun. The sun-dial was, so far as we know, the only astronomical instrument they used.

THE CALENDAR STONE OR STONE OF THE SUN.

The great *Calendar stone*, discovered buried in Cathedral square, Mexico city, proves, according to Professor Henriques Palacios, that these ancient people could mark the hours of the day with accuracy, that they were acquainted with the period of the solstice and of the Equinoxes and could foretell with precision the transit of the sun across the Zenith of Mexico. This wonderful Calendar stone, on the face of which is deeply cut, symbolic, astronomic and cryptic figures, is of dark porphyry and weighed, it is computed, fifty tons when hewed from the mountain. During the reign of the first of the Montezumas it was transported to Mexico City from beyond Lake Chalco, a distance of thirty miles over land intersected by canals. The central figure of the stone represents the sun and the year; the twenty figures placed in a circle around the sun stand for the twenty days of the Aztec month; the date 13th, *ucalle*, above the head of the sun on the border of the stone, corresponds with our date 1479, A.D.*

Writing of this stone, Prescott says:

"When we reflect on this difficulty of heaving such a tremendous mass from its hard basaltic bed without the aid of iron tools, and of transporting it such a distance across land and water without the help of animals, we must feel admiration for the ingenuity and enterprise of the people who accomplished it."

Writing of the advanced agriculture of these ancient Americans, Professor O. F. Cook, who was a member of the expedition sent to Peru in 1915 by Yale University, says: "At a time when our ancestors in northern Europe were still

*Dr. Palacios, Professor Valentini, and Señor Chavero have given a larger interpretation to the cryptic figures, but their readings require confirmation.

Wonderful sculptured figure. Prehistoric city of Copan, HONDURAS.

utter savages, settled agricultural communities must have existed in the Peruvian region. The native agriculture of this land," he adds in his article which appeared in the National Geographic Magazine, May 1916, "reached an advanced stage of reclamation projects long before America was discovered by Europeans. Our undertakings sink into insignificance in the face of what this vanished race accomplished." "With tools made of an alloy of tin and copper," writes Prescott in his "History of the Conquest of Mexico," "they cut not only metals, but with the aid of a silicious dust, the hardest substances, such as basalt, porphyry, amethysts, and emeralds. They cast also vessels of gold and silver, carving them in a very delicate manner. They imitated very nicely the figures of animals and, what was extraordinary, could mix the metals in such a manner that the feathers of a bird, or the scales of a fish should be alternately of gold and silver. The Spanish goldsmiths admitted their superiority over themselves in these ingenious works."

In Mexico and Peru copper and tin were alloyed and hardened to the consistency of iron, gold and silver and bronze were skilfully beaten out and worked into filigree; there were excellent images of singing birds in gold and in silver, and a profusion of gold plate.

The Department of American Antiquities in the National Museum, Mexico City, is among the most notable in the world, and is a veritable treasure house of pre-Columbian relics and pre-historic "finds." In one room of this department are exhibited specimens of the famous Aztec picture writings, and Aztec maps and drawing of Tenochitlan, now the City of Mexico. Here also are arms, jewels, glazed pottery, and cloth made from the fibres of the heneguen and maguey plants. Beautiful examples of feather cloth woven from extremely delicate floss of cotton, combined with feathers and rabbit's fur, polished crystals, obsidian or volcanic glass manufactured into delicate objects of ornamental or economic value are on exhibition, while figures of gold and silver, exquisitely wrought and filigree ornaments of beautiful design fill many cases in the Museum.

When examining these strange and wonderful exhibits you cannot help regretting that from the wreck of this primitive civilization some of the arts belonging to it were not saved and handed down to us. We do not know for a certainty how their astronomers determined the apparent motion of the sun, nor measured the length of the solar year. We cannot understand how they cut and polished crystals and other stones; manufactured delicate and complicated articles from volcanic glass; cast figures of gold and silver in one piece; made filigree ornaments without soldering; applied to pottery smooth and transparent glazes, such as we find in our own fine ware, and with colors that, after remaining for centuries buried among ruins, are yet fresh and brilliant. Nor do we know how they were able to weave rabbits' fur and beautifully delicate feathers with the finest tissues of cotton into valuable cloth.

Here it may be pertinent to enquire into the origin of this extraordinary civilization of these ancient Americans. Anthropologists, such as d'Orbigny, Heinrich Schliemann and Brasseur de Bourbourg are of the opinion that the regions now known as Yucatan, Chiapas and Tabasco were the cradle-lands of primitive American civilization. From this land, in very early days, went out colonies which established themselves in Honduras, Peru and Guatemala, carrying with them the culture and arts of civilized men.

From here also detached bodies moved northward and settled in parts of the territory known to-day as Mexico, where they built Mitla, Xochicalco, and other cities whose ruins excite our astonishment and admiration.

Everywhere in these lands we find the tidal remains of an ancient race which welled up from its primal bed in Yucatan, multiplied and rolled on over the entire continent. Everywhere also are the melancholy memorials of a people who, after accomplishing great things, ran their course and perished in the veiled ages of prehistoric times. In Copan, Chichim-Itza and Palenque are the remains of a cultivated, polished and enterprising people who, like the inhabitants of Tyre and Sidon, had passed through all the stages and gradations belonging to the rise and fall of Babylonian and Persian Empires.

They reached the highest material civilization and perished as perished the people of Heliopolis and Memphis. In the romance of the world's history there is nothing more pathetic than the ruins of Palenque. Discovered by accident, its original name is as entirely forgotten as are the names of those who built the city. It is but another witness to the world's mutations and to the eternal truth that:

"Nations melt
From Power's high pinnacle, when they have felt
The sunshine for a time, and downward go."

It was desolate and in ruins when, in 1520, Cortez, on his conquering march to Honduras, passed within a day's march of the city and makes no mention of it in his reports.

DECLINE AND FALL OF PRE-COLUMBIAN CIVILIZATION.

It is impossible to deny the civilization and vast antiquity of these prehistoric people without invoking the aid of arguments, negations and criticisms which would destroy the credibility of all history. When you move among the remains of these forest shrouded and phantom cities and gaze upon the ruined temples, altars and monuments, you know that they are but the pitiful fragments left after the wreck of a civilization that was lost long ago in the awful storms of civil war, of pestilence, or in the gradual debasement of individual and national life.

Standing among the wreck and ruin of the temples, statuary and altars of this vanished race, whose language no man may speak, whose faces are unlike those of any people known to us, it is impossible not to credit them with a certain grandeur of thought, high architectural skill, indomitable energy, and a debasement of moral and religious life supremely sad and pitiful. We do not know how, like Milton's angels, these civilized people fell from their high estate, never to rise again. Possibly, their civilization, like that of many ancient races, was destroyed by their own pride and arrogance, their own vices and corruption for:

"This is the moral of all human tales:
'Tis but the sad rehearsal of the past.
First, freedom, then glory; when that fails,
Wealth, vice, corruption, barbarism at last,
And history with all her volumes vast,
Hath but one page."

Without doubt feuds and fratricidal wars wore them down and possibly plagues and famines. Flying before their victorious conquerors defeated remnants fled northward into the forest and in time lost the best part of their civilization. They lost their social strength, their historic memories, arts, traditions, crafts and, in many instances, the very means and methods of cultivating the soil.

Who may deny that the savage or barbarian tribes who roamed the plains or peopled the forests of North America, in the memory of men yet living, were not the descendants of these hunted families; these remnants from a civilization that in remote ages was lost in lurid storms of war, or disappeared under adverse conditions which then, as now, make for the decay of national unity, national virtue and character. Observing in particular the social and the family state and the condition of the Canadian Indians from our own observation of their habits and our limited knowledge of their history, we note that the same fortunes have followed their migrations that followed those of all dispersed and scattered races.

When human beings become destitute and desperate conditions of existence confront them, barbarism and savagery will, in time, overtake them. When driven by the fortunes of war, or under the dire pressure of famine, from its own land, the flying remnant gradually separates from the civilization it carries from its home, it loses its culture just as we would lose it now, with all our refinement, if we were forced to live the nomadic or the hunter's life with its trials and hardships. And in the forests and desert wilderness to which the fugitives fled for safety, we can well imagine desperate conditions of existence and, therefore, impossible conditions of civilization.

CRADLE LANDS OF OUR CANADIAN INDIANS.

From this civilized race, inhabiting in remote times Yucatan and Central America, came by way of Cuba and Florida, our North American Indians and also our Algonquins and Hurons. When Jacques Cartier ascended the St. Lawrence to Montreal, in 1535, the Indians he then encountered were in the neolithic stage, for their pipes, spear heads and arrow tips were deftly formed and polished. Their pottery was remarkably well fashioned and decorated with patterns and figures like unto those on the pottery now cased in the museum of Guatemala City. The Canadian Hurons and Algonquins of Champlain's time retained in their limited vocabulary many tropic words such, for example, as *Calumet*, *sicicouet* (chi-chi-koue or rattle), *sagumite*; *petun* (tobacco) and many other words.*

Advancing northward they brought with them their feast and war dances, worship of the sun and the serpent, veneration for fire, belief in the immortality of the soul and in good and evil spirits, exogamy or denial of marriages among blood relatives, the law of maternal descent, methods of curing disease, painting the faces of their dead and burying with the corpse, pipes, weapons, provisions and various articles to be used in the spirit world. All these and many rites and ceremonies, with sorcerers, shamans and prophets, they inherited from their southern forbears of immemorial times. They brought with them in their emigrations the seeds of tobacco, squash, beans and maize or Indian corn. They retained the knowledge of moulding pottery, of fleshing and curing hides and

*The word *petun*, the Bureau of American Ethnology informs us, is used by Central and South American tribes for tobacco which is itself of Haiti origin.

utilizing shell beads for wampum, which arts were practised among the Maya and Quicha tribes as late as the time of Oviedo. Many of the ceremonial, social and religious practices of our Indians are almost identically the same as those of the Mayas and Aztecs who lived when Cortez landed, 1519, at Veru Cruz. Moreover the colour of our Indians indicates a southern origin. It takes thousands of years to give a new colour to a race and thousands of years under changed climatic conditions, to alter that colour. To any one familiar with the early history of the tribes of Louisiana, especially with that of the Natches, who retained the worship of perpetual fire and the practice of human sacrifice, the similarity of their religious rites, customs and habits, with those of the Mayas and Quiches of Yucatan will be at once perceived.

The discovery of tumuli, mounds and fortifications, extending in ranges through the valleys of the Ohio and the Mississippi, and through New York state into Ontario; the ruins of cities discovered ninety years ago in Arkansas and Wisconsin, suggest a migration and dispersion of the aboriginal tribes that in remote times crossed dry shod over the land bridge which united Yucatan, Cuba and Florida. That such a causeway existed in early times is now admitted by hydrographers and students of physical geography, including the late M. Fontaine and Maury, the eminent hydrographer and physicist.

NOTE—Independently of my own observations, I have, in this article, drawn freely from the writings of Senor Enrique Juan Palacios, Mr A. F. Bandelier, the late Señor Manuel Orozcoy Berra, John L. Stephens and Señor Antonio García Cubas. The illustrations are copied from the drawings of M. F. Catherwood.

METHOD IN ARCHÆOLOGY

BY ARTHUR C. PARKER, M.Sc.
(State Archaeologist of New York.)

Archæology is one of those newer branches of human science, and because it is new and somewhat organized, and altogether human, there have been many men, (and not a few women), who have believed themselves to be archæologists. Now, a serpent would not be unwise enough to believe itself an ophiologist simply because it had been condemned to crawl on its belly and to hiss out its hate; no mocking bird in the ecstasy of song would conjure itself an ornithologist; no rock would ever proclaim itself a geologist simply because it happened to be a monument of the eons and an upthrust of an igneous age. Yet, because man is man, somehow some men believe that there is no other requirement necessary to be an archæologist.

I once asked a poor, but happy, half-wit what he was doing in a cornfield. He answered, "You see, mister, I'm an archæologist, and I'm pickin' up arrow-heads."

"Well, why do you pick them up?" I asked, to draw the fellow out.

"Well, you see, mister," he answered, "I can't help it; they are so bright and shiny. I, I—, can't help it, really; they are so bright and shiny."

Now, it would be going too far to say that all archæologists pick up arrow-heads for this identical reason, and yet there are many, like this half-wit, calling themselves archæologists, who can give answers scarcely better. Hypnotized by a word that sounds scientific they endeavor to absorb its attributes by playing with its by-products.

A young man whom I had once employed as a field helper for a period of four weeks came to me some time later with the request that I advise him in the matter of a professional card. "Will it be all right," he asked, "if I print after my name the title 'Expert Archæologist?' for you said, yourself, that I was one of the best men you ever had to help you dig?"

When I told the lad that after some twenty years of experience, with several years of institutional training back of that, I would not dream of calling myself *an expert*, and therefore advised him not to try it, he felt grossly injured. "Well, then," I said, "let us grant for a moment that you are an expert archæologist. Answer me the following questions: What is the heliolithic culture? What is the code of Hammurabi? What has the Tel Aney to do with Anu? Who excavated Nakum?"

And thus it happened that my young friend did not have his "professional" cards printed. This case is not an isolated one, for count the number of men who call themselves archæologists just because they have picked up an arrowhead or two. There are even collectors with 10,000 fine objects in their cabinets who, though ranked as archæologists in the public mind, know so little of archæology that they cannot define the term. Yet you will hear these men say, "I have collected Indian relics all over Canada and the States. Forty years of my life have been spent in gathering this collection. Here it is: 5,000 arrow points,

100 pipes, 50 gorgets, and all the rest of it — the finest collection in the country! And you tell me I am no archaeologist! Why, I have dug up more than 200 Indian graves.”

Let us take this gentleman as a typical amateur archaeologist and accept his statements as the truth. Having had as much experience as he claims, no doubt he can answer certain questions that interest students of American pre-history. Let us ask the following: “What are the chief problems of American archaeology? What are the associated artifacts of each culture represented within the area of your explorations? What is the difference between the pottery of the gorget-using people and that of the people who made clay pipes with concentric rings about the bowls? With relation to the position of the skeleton, where was each artifact from a grave found? You found this birdstone in a grave: near what portion of the body did it rest? Where are your field notes? What proportion of the skeletons found were platymeric? Platymeric? Had the perforated olecranon cavity? Had shovel-shaped teeth? Were dolichocephalic? Brachycephalic? Where are your anatomical index cards? Where are your photographs of skeletons in situ? What good are your relics?”

I once asked a physician-collector questions similar to these, and received the angry reply that if I didn't believe the relics *genuine*, I need not buy them! Needless to say, I did believe the relics genuine, but I did not buy a single one for the museum that I represented. The man had explored a region characterized by at least four different cultures—one of the most interesting regions in the State of New York, yet he had thrown all arrow heads in one box, all pipes in another, all polished slates in another, and so on. Not a specimen had a number, a data blank, or a single written record. The doctor's principal concern was that each *relic* was genuine, that he had found it, and that in the more or less distant past some aborigine had made it. Further than that his mind did not conceive. For fifty years he had dug, hunted the surface or traded relics. In these fifty years he had ruined one of the key regions of the Empire State, so far as archaeology is concerned. He had one satisfaction—that no one else would ever get as many from this area as he, and that he had proven as well that this country was once full of Indians.

In no other natural science is there this calm assurance. Where will you find a company of men calling themselves geologists, who simply hunt stones from here and there and everywhere, throwing all green rocks in one box, all laminated stones in another, all long stones in another, all round stones in another, and so on? In paleontology, where will you find devotees putting all fossils in one bin and then sorting them out by external appearances, regardless of location or strata? This, you would say, was the very antithesis of science and led to nowhere. An expert would go further and say that it was a waste of time and the destruction of a nascent science instead of the creation of it.

Let us suppose that the great archives at Ottawa were destroyed by a mighty tornado, and that its priceless records of Canada's history were torn into millions of shreds and scattered like confetti over the province. Suppose, then that some dullard, wandering over the land in after days, began to pick up all the letter “A”s that he could find, pasting them in an album. His collecting propensities then would cause another enthusiast to collect all the letter “B”s. Together they would go, with others who would be attracted by such a hunt, and pick up scattered letters from here and there, tearing them from already torn pages and pasting them in their albums. Their great joy would be in finding letters that they could identify, and in tearing them from the rest of the pages that they

found unintelligible. Finally, these men would gather into a club and proclaim themselves Archivists, and to prove their right to the title would exhibit their albums of letters. "Ah, what a finely illuminated letter .A that is," you would hear one exclaim. "It is different from this one I found, for mine has a duller point and is crossed higher up." Then would come the enthusiasts who would point out that the .A men were not scientists at all, for a chosen group had discovered at least twenty-six different types of letters, each of which had two characters. This would be a great discovery indeed, but what would it have to do with the history of Canada?

This sounds like an impossible occurrence, and yet, what do we find among men calling themselves "archaeologists?"

Travel where you will, you will find men who *collect* arrowheads, and nothing but arrowheads. There are wonderful collections of *just* arrowheads. There are men who are almost insane on arrowheads: they pick them up wherever they go and little else will they see. Some of these men pride themselves on having developed "the arrowhead eye," by which they can discover arrowheads if even so much as an edge or a barb projects from the ground. You will find these arrowheads nailed to boards or pasted on cards in fanciful shapes—in tepees, large arrow outlines, stars, swastikas, Indian heads and the like. Some of these collectors have ambitions to cover the walls of their dens with these blocks, like crazy quilt patterns. Their book plates are arrowhead designs and they wear arrowheads on their watchchains. Frequently their very whiskers are combed to represent their sacred flints.

And then there comes along a student who says, "Hold, my friend: there are twenty-six, and more, other kinds of things to collect. Listen to me—I find pipes, gorgets, birdstones, amulets, hammerstones, runtees, awls, beads, celts, gouges, grooved axes, disks, pottery, and scores of other things. I have a great collection of these things—they 'are wonderful.'"

Then, to disconcert the man with the arrowheads and his fellow with the twenty-six different kinds of things, a museum director comes along and inquires "Well, what has all this to do with the history of mankind?"

II

Archaeology is nothing more or less than *pre-history*. It is the history of the race unconsciously written into the brown skin of Mother Earth and obscured by the layers of dirt that have been accumulated. Here and there is an intentional record, as in the monuments of the Mayas, or in the megaliths of Peru, but for the most part the record unconsciously written into the soil by the aborigines reveals itself in plainer language and is easiest of interpretation.

To those who by habit of thought have learned to lean upon dogmatic assertions, upon the written word alone, it may not at first appear how anything can be learned of man's history before history was written. Yet, as we have stated in another paragraph above, early man left upon the surface of the soil and scratched into it traces of his activities. These "traces" are as truly records as the written word would be, and in many cases far more accurate and satisfactory.

The refuse pit in many a hunter's camp survives to tell the story of the man who dug it. From such pits, through the artifacts and other evidences that have endured the elements, we have learned of the things he made, what weapons he had, and how he fashioned them, what he knew of tools and methods of manufacture, what food he ate, what he hunted and what he cultivated. We

may even know something of his idea of art and decoration, and we may even make good guesses at his religious beliefs. Every such pit, every such site, is a record of a man or a group of men: it is a sketch of their life story; it is a leaf from the book of pre-history.

It will be seen, therefore, that archaeology has ends in view far more important than the mere collecting of relics and specimens, and that its aim is far more definite than that of only describing the "relics" found on pit or mound. These "relics" are to the archaeologist specimens of human handiwork, and illustrative of some stage of culture. They are valuable, primarily, for what may be learned from them.

III.

It thus appears that the archaeological specimen is not a thing apart, but only a unit in a larger complex. The terra cotta pipe from a village site on the Grand River is not an object to be held alone. It is only a letter or perhaps a word in the story of that site. What period of time, what occupation, what culture does it represent? These are things that we want to know. But that is not all. We must go further and ask what the associated artifacts are. In a museum of twentieth century costume, one would never think of cutting the buttons off coats and skirts and exhibiting the buttons in cases by themselves; this would be ridiculous, especially if the rest of the garment were cut apart and sorted out by parts. What the visitor would like to see first of all, is the garment in its entirety. Just so, the clay pipe from the Grand River, or any other site, must be placed together with all the other artifacts found in its immediate vicinity. For, how may we translate the record if the pages are cut apart and all the words "pipe" pasted together in an album, just for the sake of order? Would a student of Cicero do this in translating classic orations? If not, why should the archaeological aspirant do so?

But that this is done by most collectors and by most museums is a startling fact, and points out most clearly that something is wrong—very wrong. What is it?

The wrong is simply this: the bulk of archaeological specimens are found by persons utterly unfamiliar with archaeology as a science. Vast quantities of specimens accumulate in the collector's cabinet, that come to him by anything but scientific ways. These things are passed on to museums, to emphasize the fact that specimens of aboriginal artifacts are numerous and attractive, and likewise to call attention to the fact that *the story of aboriginal man, which might be rescued, interpreted and preserved, is being actually destroyed in the most thoughtless manner.*

In most museums, unless they are supported by ample means and have a definite policy, it is not possible to exhibit specimens in their logical relation to the associated artifacts characteristic of the site. Progress in archaeological knowledge, therefore, has been rather slow, from the very force of circumstances. Think of the science of surgery waiting for accidental results to bring to it the facts it requires. They come in this manner, to be sure, but the real surgeon takes his knife and explores with definite purpose.

If archaeology is to be lifted from the category of an amateur pursuit, in which the collector of curiosities reigns as supreme monarch, it must emulate the surgeon—go after its data with definite purpose, seeking what it may find and then keeping it *together!* To allow the untrained collector to pick here and there, means destruction and confusion only.

IV.

How shall we lift archaeology from the low standards to which it has been condemned? How may we prove that it is a science capable of shedding important light on the world's problems?

There are two methods among others that commend themselves to attention. First, *museums must seek to acquire their specimens only by deliberate excavation.* The field archaeologist must be a trained man, capable of conducting his work, assiduous in his note taking, careful with his records, and doing his work as much with his camera as he does with his trowel. Trained men are to be found in all universities with courses in anthropology. No longer must a museum content itself with a here-and-there specimen bought or accepted as a gift.

Once a site is excavated and its history written, this history of the site may be illustrated by the specimens found. The museum will prepare its bulletin exhibits in the form of labels, and then use the specimen as illustrative material. The junk-shop museum must go as a relic of the dark ages of archaeology, and it cannot go too soon. But it cannot go so long as legislatures and parliaments fail to provide the means by which a collecting hobby may become a sober science.

When such exhibits do finally merge into methodological arrays of culture history, we shall have one of the most attractive types of museum display. Schoolmen, students, savants and ordinary citizens will visit them, not to be confused, horrified or amused, but to see unfolded before their very eyes the material evidences of the evolution and progress of mankind. There they will read a story presented in a most fascinating way, and in it they will discover things of vital appeal.

The second remedy is to *forbid untrained private collectors to do any excavating whatever.* This sounds startling and impracticable, but a number of states in the United States now actually have laws making it a misdemeanor punishable by fine or otherwise to touch, injure, excavate or otherwise disturb archaeological sites and monuments. Permission may only be obtained from reputable institutions, as a State Museum, or Archaeological Association, and is granted only to applicants known to be trained students or who can prove themselves so. The reason for this is at once apparent. No man has a moral right to destroy the record that ancient man has for generations written so patiently into the soil. No man should have a *legal right* to do it, for this record, once destroyed, can never be restored; once disturbed, it is gone forever.

V.

The problems of North American archaeology are numerous and some of them complex, but in general may be outlined in a manner that readily may be understood. Let us mention some of them.

I. How came man to North America? What routes did he take? What various divisions of the human race—if there were various divisions—peopled America? What was the direction of their migration? What is the age of each stock we now recognize, and where did it crystallize as a distinct group? When did certain stocks pass out of this region, and where did they go? What relation do the North American stocks bear to the peoples of other continents?

II. What are the characteristic artifacts of each culture? How do these artifacts differ from those of other cultures? What are the prototypes of each artifact? What artifacts became obsolete in a given group, and what were in-

vented or more recently employed? What in the material culture of one group does a neighboring group lack? What does this lack signify?

III. What was the physical type of each group? What is known of their skulls and other bones? Were any groups characterized by any definite morphological feature? Which were platyenic? What was known of cranial deformation by artificial means? What was the stature and apparent weight of each group?

IV. What did each group know of, (a) agriculture; (b) hut building; (c) earth-works, as mounds, etc.; (d) quarrying; (e) stone working? What evidences of knowledge of government, law, measurements, religion, industry, etc., does each group exhibit?

V. What are the various cultures represented within the area of our investigation? What have we done to map this area? Where are the key sites of each culture? What has been done to trace these sites chronologically? What cultural significance has each site?

Such are some of the questions that arise in every general region, and these questions to a large extent outline our problem. Archaeology, however, is only a portion of the much more extensive science of anthropology. In order to interpret archaeological facts, in our province, at least, we must bring to our assistance the science of ethnology. Fortunately, in Ontario and New York, and the contiguous region, we are able to avail ourselves of ethnological data, and have a distinct advantage over other regions, as Ohio, in the interpretation of archaeological data. We know that the Huron-Iroquois linguistic stock occupied a portion of this region when the colonists from Europe took possession. We know that various branches of the great Algonkian family lived here. We even have written history as an aid, and thus both archaeology and ethnology are raised from the realm of pure deduction. With such help, we are able to work our way backward from the known to the unknown, and to draw our conclusions with some degree of certainty. This is a great advantage, for it strengthens our position in this work of investigation.

With these questions before us as guides to research, and with certain facts definitely known, we are able to begin our task of re-creating the story of yesterday's peoples. *This visualization of pre-history is exactly what we are seeking to attain.* Our goal is to see and understand the past. We want to know what and who these people were, where they came from, where they went, what they did, *what they thought* and how they met their environment.

Intelligent man wants a continuous history of himself, without breaks or missing chapters. He wants this that he may understand his own evolution and its lessons. This is why biologists seek to trace out the cradle land of the race and to hunt for the bones of the earliest anthropoids.

Our local archaeology sheds light on certain chapters in the story of man in North America. It is our task to make these chapters intelligible and clear. It is our duty to discourage the untrained collector, who wants to tear up the documents that we rely upon for data, merely because he wants to collect a few isolated letters—arrowheads and pipes. Better still, it is our duty to see that this untrained man gets a new perspective, acquires knowledge of the right sort, and then becomes aware of the enormity of his crime. We must show him that no one has a right to be a collector unless he is first an archaeologist in fact. We should then provide him with the guidance and literature that will be help-

ful in attaining these ends. Outside of direct university training through courses in anthropology, this can best be done by museum publications and scientific exhibits.

Our plea is for method and the application of scientific principles. Archaeology cannot advance as a science until the public realizes that collecting "Indian relics" is not archaeology, any more than collecting knives and pickled livers is surgery.

Until we catch a vision of the purpose of archaeology and realize that it is a science, indeed, and not a mere hobby, we can have no conception of what archaeology means. And when we do realize what it means we are astonished at its scope and its significance, for then, not only is history ours, but *pre-history*.

VI.

Archaeology is the logical method by which we of to-day may gain some certain knowledge relating to the conditions, circumstances, environment, culture, capacity, thoughts and products of the groups of mankind that lived in the periods of time that have failed to bestow upon us letter-written records. Archaeology is an exposition of prehistoric man.

Man has always been a problem to himself, and ancient man, no less than his modern descendant, has asked those wiser minds about him whence he came. Mankind's remote origin, ancestry, struggles to attain type and to survive, are things veiled and obscure. It is in the race-mind to question everything. We want to know why we do certain things in the manner in which they are done; we want to know why we have certain instincts, certain proclivities, certain habits, why we love to travel and feel its irrepressible urge to wander and to explore; we want to know our ancestry and the abode of our fathers, we want to know why we make things in certain ways and why we believe as we do.

It is of importance to understand all these things. What man was in the dim, distant past, when the race was young, has an important bearing on what man is now. Before the race can wisely plan its journey forward it must know something definite about the start of that journey. There is a goal ahead *somewhere*, and the question is whether or not we are on the right road to it, and if not, why **not**? We are anxious to know whether we have made the right start, and if so, why so many evils beset us. The intelligence of the race realizes that *what man was* has a tremendous bearing on *what man may become*. And to determine what man once was we are compelled to draw from the body of facts that constitute archaeology.

BURIAL CEREMONIES OF THE HURONS

Our savages are not savages as regards the duties which nature herself requires us to render to the dead. They do not yield in this respect to several nations much more civilized. You would say that all their labor and efforts were for scarcely anything, but to amass means of honoring the dead. They have nothing too valuable for this purpose; they devote to this use the robes, the hatchets, and the shell beads in such quantities, that you would think to see them, on these occasions, that they were considered of no great value, and yet they are all the riches of the country; you may often see them in midwinter almost entirely naked, while they have good and fine robes in their chests, which they are keeping in reserve for the dead; this is, indeed, their point of honor. It is on this occasion especially that they wish to appear magnificent. But I speak here only of their peculiar funerals.

These good people are not like many Christians, who cannot suffer death to be spoken of, and who, in a mortal sickness, hesitate to break the news to one for fear of hastening his death. Here, when the recovery of any one is despaired of, not only do they not hesitate to tell him that his end is near, but they even prepare in his presence all that is necessary for the burial; they often show him the shroud, the hose, the shoes, and the girdle which he is to wear; frequently they are enshrouded, after their custom, before they have expired, and they hold a feast of farewell to their friends, during which they sing, sometimes without showing any apprehension of death, which they regard very indifferently, considering it only as a change to a life very little different from this. As soon as the dying man has drawn his last breath, they arrange the body in the same position that is to be preserved in the tomb; they do not lay it out horizontally, as is our custom, but crouched, like a ball (*en peloton*), "quasi en la mesme posture que les enfants sont au ventre de la mere." Until this time they restrain their mourning. After having performed these duties, all in the cabin begin to utter sighs, groans, and lamentations; the children cry *Aïstan*, if it is their father, and the mother *Aïen, Aïen*, "My son, my son." No one seeing them thus weeping and mourning would think that they were only ceremonial lamentations; they blend their voices all in one accord and in a lugubrious tone, until some one in authority calls for peace; at once they cease and the captain hastens to announce through all the cabins that such a one is dead. Upon the arrival of the friends they resume their mourning. Frequently some one of more importance will begin to speak and will console the mother and the children, now extolling the deceased, praising his patience, his kindness, his liberality, his magnificence, and, if he was a warrior, his great courage; now saying, "What do you wish? there is no longer any remedy; it was necessary for him to die; we are all subject to death;" and then, "He lingered a very long time," etc. It is true that on this occasion they do not lack for conversation; I am sometimes surprised to see them discourse a long time on this subject, and bring up, with much discretion, all considerations that may afford any consolation to the friends of the deceased.

¹ Fifth Annual Report of the Bureau of Ethnology, translated from the Jesuit Relations, 1636, by Miss Nora Thomas.

Notice is also given of this death to the friends who live in other villages, and as each family employs another who has the care of their dead, they come as soon as possible to give orders about everything and to fix the day of the funeral. They usually inter the dead on the third day; in the morning the captain gives an order that kettles should be boiled for the deceased throughout the village. No one spares his best efforts. They do this, in my opinion, for three reasons: First, to console each other, for they exchange dishes among themselves, and scarcely any one eats out of the kettle that he has prepared; secondly, on account of the arrival of those of other villages, who often come in large numbers, lastly and principally, to gratify the soul of the deceased, who, they think, takes pleasure in eating his share. All the kettles being emptied, or at least distributed, the captain informs all the village that the body is to be carried to the cemetery. All the people assemble in the cabin; the mourning is renewed, and those who have charge of the funeral prepare a litter upon which the body is placed, laid upon a mat and wrapped in a robe of beaver skin; they then raise it and carry it by the four corners. All the people follow in silence to the cemetery.

There is in the cemetery a tomb made of bark and raised on four stakes of from 8 to 10 feet in height. While the body is placed in this and the bark is trimmed, the captain makes known the presents that have been given by the friends. In this country, as well as in others, the most agreeable consolations for the loss of relations are always accompanied by presents, which consist of kettles, hatchets, beaver skins, and necklaces of shell beads. If the deceased was of some importance in the country, not only the friends and neighbors but even the captains of other villages will come in person to bring their presents. Now, all these presents do not follow the body into the tomb; a necklace of beads is sometimes placed on its neck and near it a comb, a gourd-full of oil, and two or three small loaves of bread; that is all. A large part of them goes to the relatives to dry their tears; the rest is given to those who have had charge of the funeral, to pay them for their trouble. They also keep in reserve some robes or hatchets to make presents (*largesse*) to the young man. The captain places in the hand of one of them a stick about a foot long, offering a prize to any one who will take it from him. They throw themselves headlong upon him and remain engaged in the contest sometimes for an hour. After this each one returns peaceably to his cabin.

I forgot to say that generally throughout the ceremony the mother or wife stands at the foot of the sepulcher, calling the deceased, singing, or rather lamenting, in mournful tones.

These ceremonies are not always all observed; those who die in war they place in the ground, and the relatives make presents to their patrons, if they have any, which is generally the case in this country, to encourage them to raise soldiers and avenge the death of the warrior. Those who are drowned are also buried, after the most fleshy parts of the body have been taken away in pieces, as I have explained more particularly in speaking of their superstitions. The presents are doubled on this occasion, and all the people of the country are often there, contributing from their store; all this, they say, is to appease the Heaven of the Lake.

There are even special ceremonies for small children deceased under one or two months; they are not placed as others, in sepulchers of bark raised on stakes,

but buried in the road, in order, they say "que quelque femme passant par la, ils entrent secretement en son ventre, et que derechef elle leur donne la vie et les enfants." I doubt that the good Nicodemus would have found much difficulty there, although he doubted only for old men, "quomodo potest homo nasci cum sit senex."

This beautiful ceremony took place this winter in the person of one of our little Christians, who had been named Joseph in baptism. I learned it on this occasion from the lips of the father of the child himself.

When the funeral is over the mourning does not cease; the wife continues it all the year for her husband, the husband for the wife, but the grand mourning itself lasts only ten days. During this time they remain lying on their mats wrapped in their robes, with their faces against the earth, without speaking or replying to anything, save *Osay* to those who come to visit them. They do not warm themselves in winter or eat warm things; they do not go to the feasts nor go out, save at night, for what they need; they cut a lock of hair from the back of the head and declare that it is not without deep sorrow, especially when the husband performs this ceremony on the death of his wife, or the wife on the death of her husband. Such is the great mourning.

The lesser mourning lasts all the year. When they wish to visit any one, they do not salute them nor say *Osay*, neither do they grease their hair. The women do this, however, when commanded to do so by their mothers, who have at their disposal their hair, and even their persons. It is also their privilege to send their daughters to the feasts, without which several will not go. What I think strange is that during the whole year neither the wife nor the husband marries again, else they would cause themselves to be talked about in the country.

The sepulchers are not perpetual, as their villages are only permanent for some years, as long as the wood lasts. The bodies remain in the cemeteries only until the feast of the dead, which usually takes place every twelve years. During this time they do not neglect to honor the dead often. From time to time kettles are boiled for their souls throughout the village, as on the day of the funeral, and their names are revived as often as possible. For this purpose presents are given to the captains to be given to him who will consent to take the name of the deceased; and if the latter was of consideration and had been esteemed in the country during his life, he who represents him, after giving a grand feast to all the people of the country, to introduce himself under this name, raises a body of free young men and goes to war to accomplish some brave feat, which will show to the nation that he has not only inherited the name but also the bravery and courage of the deceased.

THE SOLEMN FEAST OF THE DEAD.

The feast of the dead is the most celebrated ceremony that takes place among the Hurons. They give it the name of festival for the reason, as I should say now, that when the bodies are taken from the cemeteries each captain makes a "feast to the souls" in his village. The most important and magnificent is that of the master of the feast, who is for this reason called, par excellence, the "Maistre du Festin."

This feast is full of ceremonies, but the chief one is evidently that of "boiling the kettle." This outdoes all the others, and the festival of the dead is spoken of, even in the most serious councils, only under the name *Chaudiere* (the kettle).

They appropriate to it all the terms of cookery, so that when they speak of hastening or retarding the feast they say "rake out" or "stir up the fire under the kettle;" and when any one says "the kettle is overturned," that means there will be no feast.

There is generally only one festival in each nation. All the bodies are placed in the same grave. I say generally, for this year when the *fête des Morts* took place the kettle-boiling was divided and five villages at this point where we are stationed made a separate band and placed their dead in a separate grave. He who had been captain of the preceding feast, and who is like the chief at this point, made the excuse that his kettle and his feast had been spoiled and that he was obliged to make another. But, in fact, this was only a pretext. The real reason of this separation is that the great heads of the village have complained for a long time that the others took everything to themselves, that they did not share as they wished the knowledge of the affairs of the country, and that they were not called to the most secret and important councils and to the division of the presents.

This separation has been followed by distrust on both sides. God grant that it cause no hindrance to the spreading of the sacred Gospel. But I must touch briefly upon the order and the events of the feast.

The twelve years or more having expired, the old people and great men of the nation assemble to decide upon the time when the feast shall be held, so as to satisfy all the people of the country and the outside nations who are to be invited.

When the decision is made, as all the bodies are to be transported to the village where the common grave is made, each family takes charge of its dead with a care and affection that cannot be described. If they have relatives buried in any part of the country whatever, they spare no trouble to go and bring them. They take them from the cemeteries, carry them on their own shoulders, and cover them with the finest robes they have in their possession. In each village a good day is chosen, and they repair to the cemetery, where those called *Aiheonde* who have had the care of the sepulcher, take the bodies from the tomb in the presence of the relatives, who renew their tears and repeat the mourning of the day of the funeral.

I was present at this ceremony, and willingly invited all our servants, for I do not think that there can be seen in this world a livelier image or more perfect representation of the condition of man.

It is true that in France our cemeteries speak forcibly, and that all these bones heaped upon one another without distinction, the poor with the rich or the small with the great, are so many voices continually reminding us of death, the vanity of worldly things, and the insignificance of this present life. But it seems to me that the custom of our savages on this occasion shows us still more sensibly our wretchedness, for after the graves are opened all the bodies are laid out on the ground and left thus uncovered for some time, giving the spectators an opportunity for once to see what will be their condition some day. Some of the bodies are entirely devoid of flesh and have only a dry skin on the bones; others appear as if they had been smoked and dried and show scarcely any sign of decay. Others still are covered with worms.

The friends, being satisfied with this sight, cover them with handsome robes of beaver-skin, entirely new. Finally, after a while, they strip off the flesh and

skin, which they throw into the fire, together with the robes and mats in which the bodies have been buried. The complete bodies of those newly buried are left in the same condition and the friends content themselves with simply covering them with new robes. They touched only one old man, of whom I have spoken heretofore, who died this autumn on the return from fishing. This large body had only begun to decay a month ago, at the time of the first heat of spring; the worms were swarming all over it, and the pus which came from it caused an odor almost intolerable; nevertheless they had the courage to take the body from the robe in which it was enveloped, cleansed it as much as possible, took it up carefully and placed it in a new mat and robe, and all this was accomplished without exposing any of this corruption. Is here not a good example to animate the hearts of Christians, who should have more noble ideas to deeds of charity and works of pity toward their brethren? After this who will look with horror upon the misery of a hospital? And who will not feel a peculiar pleasure in serving a sick man covered with wounds, in whose person he serves the Son of God?

As they were stripping the bodies they found in two of them a species of charm. The one that I saw with my own eyes was a turtle's egg with a leather strap (courroye); the other, which was examined by our fathers, was a small turtle the size of a nut. This leads to the belief that there were sorcerers in our village, on account of which some resolved to leave it as soon as possible. Indeed, two or three days after one of the richest men, fearing that some misfortune would befall him, transported his cabin two leagues from us to the village of Arontaen.

Now, when these bones are well cleaned, part of them are placed in sacks, part in blankets, and they carry them on their shoulders, covering these bundles with other beautiful hanging robes. Entire bodies are put on a sort of litter and carried with all the others, each one taking his bundle into his cabin, where every family makes a feast to its dead.

Returning from this festival with a captain, who has considerable intelligence and who will be some day of high standing in the affairs of the country, I asked him why they called the bones of the dead *Atisken*. He explained as clearly as he could, and I learned from what he said that many believe that we have two souls, both divisible and material and yet both rational; one leaves the body at death, but remains, however, in the cemetery until the feast of the dead, after which it either is changed into a turtle-dove, or according to the more general belief, it goes immediately to the village of souls.

The other soul is attached to the body; it marks the corpse, as it were, and remains in the grave after the feast, never to leave it, "si ce n'est que quelqu'un l'enfante de relief." He mentioned to me, as a proof of this metempsychosis, the perfect resemblance which some persons bear to others who are deceased. Here is a grand philosophy. This is why they call the bones of the dead *Atisken* "the souls."

A day or two before departing for the feast they carried all these bodies into one of the largest cabins of the village, where some of them were attached to the poles of the cabin, and others laid around it, and the captain entertained and made a grand feast in the name of the deceased captain, whose name he bore. I was present at this "feast of spirits," and observed four things in particular: First, that the offerings which were given for the feast by the friends, and which consisted of robes, necklaces of shell beads, and kettles, were hung on poles ex-

tending the whole length of the cabin from one side to the other. Second, the captain sang the song of the dead captain, according to the desire he had expressed before his death, that it should be sung on this occasion. Third, all the guests had the privilege of dividing among themselves all the good things they had brought, and even of carrying them home, contrary to the custom at ordinary feasts. Lastly, at the close of the feast, as a compliment to him who had entertained them, they imitated as they sang the cry of the spirits, and left the cabin crying *haéé haé*.

The master of the feast, and even *Aenckhioudic*, captain-general of all the country, sent to invite us several times with much solicitation. You would have thought that the feast could not be a success without us. I sent two of our fathers several days beforehand to see the preparations and to learn exactly the day of the feast. *Aenckhioudic* received them very kindly, and on their departure conducted them himself a quarter of a league from there to where the grave was dug, and showed them with much display of emotion all the arrangements, etc. of the feast.

This feast was to have taken place on the Saturday of Pentecost, but some affairs which came up unexpectedly, and the uncertainty of the weather caused it to be put off until Monday.

The seven or eight days before the feast were passed in collecting the bodies (les âmes) as well as assembling the strangers who were invited; meanwhile from morning till night gifts were distributed by the living to the young men in honor of the dead. On one side women were drawing the bow to see who should have the prize, which was sometimes a girdle of porcupine quills or a necklace of beads; on the other hand, in several parts of the village the young men were drawing clubs upon any who would try to capture them. The prize of this victory was a hatchet, some knives, or even a beaver robe. Every day the remains were arriving. There is some pleasure in seeing these funeral processions which number sometimes from two to three hundred persons. Each one carries the remains of his friends, that is the bones, packed upon his back after the manner that I have described, under a beautiful robe. Some arranged their packets in the shape of a man, decorated with strings of beads, with a fine crown of red hair. On leaving their village the whole company cried *haéé haé* and repeated this "cry of the spirits" all along the way. This cry, they say, comforts them greatly, otherwise their burdens, although souls, would weigh very heavily and cause a weakness of the side (costé) for the rest of their lives. They travel by short stages: the people of our village were three days in going four leagues and in reaching *Ossossané*, which we call Rochelle, where all the ceremonies were to be held. As soon as they arrive near any village they shout again the *haéé haé*. The whole village comes out to meet them; many presents are again distributed on this occasion. Each one repairs to some one of the cabins; all find a place to put their bundles; this is done without confusion. At the same time the captains hold a council to decide upon the time that the company shall spend in this village. All the bodies of the dead of eight or nine villages were taken to Rochelle on Saturday of Pentecost: but the fear of bad weather obliged them, as I have said to postpone the ceremony till Monday. We were lodged a quarter of a league from there, at the old village, in a cabin where there were at least a hundred skeletons hung up to the poles, some of which smelled stronger than musk.

Pl. II. fig. 2. pag. 456

FEAST OF THE DEAD—COMMUNAL BURIAL.

Monday at midday, word was sent that they were ready and that the ceremony would begin. The bundles of skeletons were at once taken down and the friends unfolded the wrappings to say their last farewells. Their tears flowed anew. I admired the tenderness of one woman towards the remains of her father and children. She is the daughter of a captain who died at a great age and who formerly occupied a high position in the country. She combed his hair, she touched the bones one after another with as much affection as if she would have given them life: she placed near him his *Asatanesai*, that is, his packet of rods (*bûchettes*) of the council, which are all the books and papers of the country. As for her children, she put upon their arms bracelets of shells and glass beads and bathed their bones with her tears. She could hardly be separated from them, but they were in haste, and it was necessary to start at once. The one who carried the body of this old captain walked at the head, the men following and then the women. They marched in this order until they arrived at the grave.

The following is the arrangement of this place: there was a space about as large as the Place Royale at Paris. In the centre was a large grave about 10 feet (*pieds*) deep and 5 fathoms (*brasses*) in diameter, round it a scaffolding and a sort of stage nicely made, from 9 to 10 fathoms (*brasses*) in diameter and 9 or 10 feet high; above the stage there were several poles raised and well arranged and others laid across them on which to hang all the bundles of skeletons. The entire bodies as these were to be placed at the bottom of the grave, were laid under the scaffolding the day before, resting on bark, or mats raised on stones to the height of a man around the grave. The whole company arrived with the bodies about an hour after midday, and divided into parties according to the families and villages, and laid their bundles upon the ground, almost as the pots of earth were made at the village fairs; they also unfolded their robes and all the offerings they had brought and hung them upon the poles which extended for from 500 to 600 fathoms (*toises*): there were nearly twelve hundred gifts which remained thus on exhibition for two whole hours, to give strangers an opportunity to see the riches and magnificence of the country. I did not find the company as great as I had expected: there were not more than two thousand persons. About 3 o'clock each one fastened up his bundles and folded his robes. Meanwhile each captain, in order, gave a signal, and all immediately took up their bundles of bones, ran as if at the assault of a city, mounted upon this stage by means of ladders which were placed all around, and hung them (the bundles), to the poles; each village had its department. This done, all the ladders were taken away. Some of the captains remained upon the platform and spent the rest of the afternoon, until 7 o'clock, in announcing the lists of presents which were given in the name of the deceased to some particular persons. For instance, they would say, here is what such a one, deceased, gives to a certain relative.

About 5 or 6 o'clock they lined (*pauèrent*) the bottom of the grave and bordered it with large new robes, the skins of ten beavers, in such a way that these extend more than a foot out of it. As they were preparing the robes which were to be used for this purpose, some of them descended into the grave, and came from it with their hands full of sand. I inquired what this ceremony meant, and learned that they believed that this sand will render them happy at their games (*au jeu*).

Of the twelve hundred offerings that had been exhibited on the platform, forty-eight robes were to line and trim the grave, and each complete body had,

besides the robe in which it was wrapped, another one, and some even two others, to cover it. This is all; so that I do not think that each body had one to itself, taking one with another, which is the least that it could have for its burial; for these robes of beaver skin are what the clothes and shrouds are in France. But what becomes then of the rest? We will see presently.

At 7 o'clock the bodies were lowered into the grave. We had great difficulty in approaching it. Nothing ever pictured better to me the confusion among the damned. You could see unloaded on all sides bodies half decayed, and everywhere was heard a terrible uproar of confused voices of persons who were speaking without hearing one another; ten or twelve men were in the grave and were arranging the bodies all around it, one after the other. They placed, exactly in the centre, three large kettles, which were of no use save for the spirits; one was pierced with holes, another had no handle, and the third was worth little more. I saw a few necklaces of shell beads there; it is true, many of them were put on the body. This was all that was done on this day.

The whole company passed the night on the spot, having lit a great many fires and boiled kettles. We retired to the old village with the intention of returning the next day at daylight when they were to cast the bones into the grave; but we barely arrived in time, notwithstanding all the diligence we employed, on account of an accident which happened. One of the skeletons, which was not well fastened, or perhaps was too heavy for the cord which held it, fell of itself into the grave, the noise it made awoke the whole troupe, who ran and immediately mounted, in a crowd, to the platform and emptied, without order, all the bundles into the grave, reserving, however, the robes in which they had been wrapped. We were just leaving the village at that time, but the noise was so great that it seemed almost as though we were there. Approaching we saw suddenly an image of the infernal regions. This great space was filled with fire and smoke and the air resounded on all sides with the mingled voices of the savages. This noise, nevertheless, ceased for a while, and was changed to singing, but in a tone so doleful and weird that it represented to us the terrible sadness and the depth of despair in which condemned souls are forever plunged.

Nearly all the bones had been cast in when we arrived, for it was done almost in a moment, each one being in haste for fear that there was not room for all these skeletons; nevertheless we saw enough of it to judge of the rest. There were five or six men in the grave, with poles, to arrange the bones. It was filled up within 2 feet of the top with bones, after which they turned over upon them the robes that bordered the grave all around, and covered the whole with mats and bark. The pit was then filled up with sand, rods, and stakes of wood which were thrown in promiscuously. Some of the women brought dishes of corn, and on the same day and the following days several cabins of the village furnished basketfuls of it, which were cast into the pit.

We have fifteen or twenty Christians buried with these infidels. We say a *De profundis* for their souls, with the firm hope that if the Divine goodness does not cease His blessings on His people this feast will be made no more, or will be only for Christians, and will be celebrated with rites as holy as these are foolish and useless. They also begin to be a burden upon the people for the excess and superfluous expenses that are caused by them.

All the morning was spent in distributing gifts (*largesses*), and most of the robes that had been wrapped around the bodies were cut in pieces and thrown

from the top of the platform into the midst of the crowd for whoever could seize them first. There was great sport when two or three contested the possession of one beaver skin. In order to settle it peaceably it was necessary to cut it into so many pieces, and thus they came out nearly empty-handed, for these tatters were hardly worth the picking up. I admired here the industry of one savage. He did not hurry himself to run after these flying pieces; but, as there is nothing so valuable this year in the country as tobacco (petun), he held some pieces of it in his hand, which he presented at once to those who were disputing over the skin, and thus acquired it for himself.

Before leaving the place we learned that, on the evening when presents had been given to the foreign nations, on the part of the master of the feast, we also had been named; and, in fact, as we were going, *Aenkhiondic* came and presented a new robe composed of ten beaver skins, in return for the necklace which I had given them in the midst of the council to show them the heavenly way. They were so much obliged for this present that they wished to show some acknowledgment of it in so good an assembly. I would not accept it, however, saying to him that, as we had made them this present only to persuade them to embrace our faith, they could not oblige us more than in listening to us willingly and believing in Him who rules over all. He asked what I desired that he should do with the robe. I replied that he could dispose of it in whatever way he deemed best, with which he remained perfectly satisfied. Of the rest of the twelve hundred presents forty-eight robes were used to adorn the grave. Each body wore its robe and some of them two or three. Twenty were given to the master of the feast to reward the nations who had assisted at it. A number were distributed on the part of the dead, through the captains, to their living friends. A part of them were only used for show, and were returned to those who had exhibited them. The old people (anciens), and great leaders of the country, who had the administration and management of it, privately took a great deal, and the rest were cut in pieces, as I have said, and scattered through the assembly. However, it was only the rich who lost nothing, or very little, at this feast. The mendicants and poor people brought and left there all they possessed of any value, and suffered much by striving to appear as well as others in this celebration. Every one stood upon this point of honor.

Indeed, it was only by chance that we were not also participants of the feast. During this winter the Captain Aenons, of whom I have spoken before, came to make us a proposal on the part of all the anciens of the country. At that time the boiling of the kettle (*chaudiere*) was not yet divided. They proposed to us then that we should consent to exhume the remains of the two Frenchmen who had died in this country to wit, Guillaume Chaudron and Estienne Bruslé, who was killed four years ago, and that their bones might be placed in the common grave of their dead. We replied at first that this could not be done; that it was forbidden; that as they had been baptized, and were, as we hoped, in heaven, we respected their bones too highly to allow them to be mixed with the bones of those who had not been baptized. Besides, it was not our custom to exhume the bodies of those who had been buried.

We decided, however, after all, that as they were interred in the wood and since the people desired it so much, we would consent to take up their bones on the condition that they allowed us to put them in a particular grave, with the bones of all that we had baptized in the country.

Four reasons especially persuaded us to give them this final answer. First, as it is the greatest expression of friendship and good-will that can be shown in this country, we yielded to them readily in this point that which they wished, and thus showed that we desired to love them as brothers and to live and die with them. Second, we hoped that God would be glorified in it, especially, in that separating by consent of all the nation the bodies of Christians from those of the unbelievers, it would not be difficult afterwards to obtain special permission that their Christians should be interred in a separate cemetery, which we would bless for that purpose. Third, we claimed to bury them with all the rites of the Church. Fourth, the old men, of their own accord, desired us to raise there a beautiful and magnificent cross, as they showed us afterwards more particularly. Thus the cross would have been established by the authority of the whole country and honored in the midst of this heathenism, and they would have been careful not to impute to it afterwards, as they have done in the past, all the misfortunes that befell them.

This captain thought our proposition very reasonable and the old men (anciens) of the country remained very well contented with it. Some time after, the chaudiere was divided, and, as I have said, five villages of our part of the country resolved to hold their feast apart.

In the spring a general assembly of all the principal men was held, to consult about the feast and to endeavor to prevent this schism and reunite the cooking of the kettle. These dissatisfied ones were there and I also was invited. They made me the same proposition as before. I replied that we were very well satisfied, provided that this was done under the conditions that we had demanded. I was reminded of the division, and they asked me, since there were two feasts (chaudieres), that is, two graves, on which side I desired to have our special grave. To this I answered, in order to offend no one, that I would leave it to their judgment; that they were just and wise and they could decide between themselves. The master of the feast of Rochelle said, thereupon, with condescension, that he did not claim anything and that he was willing that the other, who is the chief at this place, should have on his side the remains of our two Frenchmen. The latter replied that he laid no claim to the one that had been buried at Rochelle, but that as for the body of Estienne Bruslé it belonged to him, as it was he that had engaged with him and led him into this country. So here the bodies were separated, one on one side, the other on the other side. At this some one said privately that indeed he (the chief) had the right to demand the body of Estienne Bruslé, and that it was reasonable that he should render some honor to his bones, since they had killed him. This could not be said so discreetly but that the captain had a hint of it; he concealed his feelings, however, at the time. After the conseil, as we had already gone, he raised this reproach and began to talk with the captain of Rochelle, and finally gave over entirely the body of Bruslé, in order not to embitter and make bloody this sore, of which the people of this point have not yet cleared themselves. This caused us to resolve, that we might keep in favor with those of Rochelle, not to meddle with either the one or the other.

Truly there is reason to admire the secret judgments of God, for this infamous man certainly did not merit that honor; and to tell the truth we had hesitated much in resolving to make on this occasion a particular cemetery, and to transport to holy ground a body that had led so wicked a life in the country and

given the savages such a wrong impression of the manners of the French. At first some thought hard of it that we should have this opinion and were offended, alleging that this being so they could not boast as they hoped among strange nations of being related to the French, otherwise, it would be said to them that they did not have much appearance of it, since we had not wished to put the bones of our people with theirs. Afterwards, however, having heard all our reasons, they decided that we had acted prudently and that it was the best means of maintaining our friendship with each other.

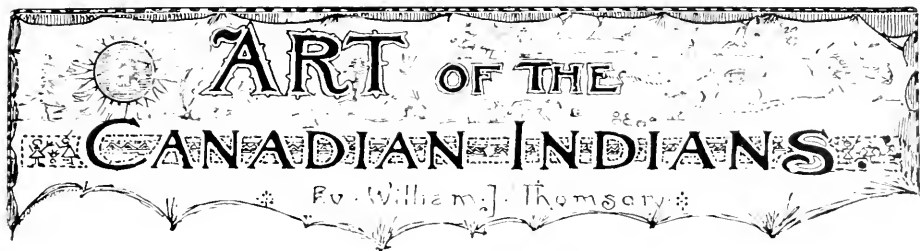

Shall I finish for the present with this funeral? Yes; since it is a mark sufficiently clear of the hope of a future life which nature seems to furnish us in the minds of these people, as a good means of making them understand the promises of Jesus Christ. Is there not reason to hope that they will do this, and that as soon as possible? Certainly I dare to assert that with this prospect we have reason to fortify our courage and to say of our Hurons what St. Paul wrote to the Philippians: "Confidens hoc ipsum, quia qui coepit in vobis opus bonum, perficiet vsque in diem Christi Iesu." These poor people open their ears to what we tell them of the kingdom of heaven; they think it very reasonable, and do not dare to contradict it. They are learning the judgments of God in the other life; they are beginning to have recourse with us to His goodness in their necessities, and our Lord seems to favor them sometimes with some particular assistance. They procure baptism for those who they think are about to die; they give us their children to be instructed, even permitting them to come three hundred leagues for this purpose, notwithstanding the tender affection they have for them; they promise to follow them one day and show us that they would not give us such precious pledges if they did not desire to keep faith with us. You would say that they were waiting only to see some one among them to be the first to take this bold step and dare to go contrary to the customs of the country. They are, finally, a people who have a permanent home (*demeure ar-rêstée*), are judicious, capable of reason, and well multiplied.

I made mention, the past year, of twelve nations entirely sedentary and harmonious, who understand the language of our Hurons; and the Hurons make in twenty villages, about 30,000 souls; if the rest is in proportion, there are more than 300,000 who speak only the Huron language. God gives us influence among them; they esteem us, and we are in such favor with them that we know not whom to listen to, so much does each one aspire to have us. In truth we would be very ungrateful for the goodness of God if we should lose courage in the midst of all this, and did not wait for Him to bring forth the fruit in his own time.

It is true that I have some little apprehension for the time when it will be necessary to speak to them in a new way of their manners and to teach them "à clouër leur chairs" and restrain themselves in the honesty of marriage, breaking off their excesses for fear of the judgment of God upon their vices. Then it will be a question of telling them openly, "Quoniam qui talia agunt regnum Dei non possidebunt." I fear that they will prove stubborn, when we speak to them of assuming Jesus Christ, wearing his colors, and distinguishing themselves in the quality of Christians from what they have been formerly by a virtue of which they scarcely know the name; when we cry unto them with the Apostle: "For this is the will of God, your sanctification; that you should abstain from fornication, that every one of you should know how to possess his vessel

in sanctification and honor; not in the passion of lust, like the gentiles that know not God." There is, I repeat, reason to fear that they may be frightened with the subject of purity and chastity, and that they will be disheartened with the doctrine of the Son of God, saying with those of Capernaum, on another subject, "Durus est hic sermo et quis potest eum audire?" Nevertheless, since with the grace of God we have already persuaded them, by the open profession we have made of this virtue, neither to do or say in our presence anything which may be averse to it—even to threaten strangers when they forget themselves before us, warning them that the French and especially the "black robes" detest these intimacies—is it not credible that if the Holy Spirit touches them once, it will so impress upon them henceforth, in every place and at all times, the reverence which they should give to His divine presence and immensity, that they will be glad to be chaste in order to be Christians, and will desire earnestly to be Christians in order to be chaste? I believe that it is for this very purpose that our Lord has inspired us to put them under the charge of St. Joseph. This great saint, who was formerly given for a husband to the glorious Virgin, to conceal from the world and the devil a virginity which God honored with His incarnation, has so much influence over the "Sainte Dame," in whose hands His Son has placed, as in deposit, all the graces which co-operate with this celestial virtue, that there is almost nothing to fear in the contrary vice, for those who are devoted to Him, as we desire our Hurons to be, as well as ourselves. It is for this purpose, and for the entire conversion of all these peoples, that we commend ourselves heartily to the prayers of all those who love or wish to love God and especially of all our fathers and brothers.

JEAN DE BREBEUF.

ART OF THE CANADIAN INDIANS.

By William J. Thomsen.

In writing about the art of savages I do not propose to discuss conundrums as to the origin of art and of the artistic faculty in man. Even if we were able to discover and demonstrate the origin of the artistic faculty among savages, even if we could trace it to some obscure germs in the habits of animals we should be no further ahead; for, suppose we were to admit, with the Darwinians, that the aesthetic sense exists in the lower animals so powerfully that the prettiest spotted birds and beasts and speckled trout obtain the noblest mates and so, artistically, improve the race, many philosophers would not listen to us. They would argue that, supposing the lovely colors of parrots, for example, to be the result of an aesthetic taste in parrots, men too, by certain reasoning, should be born into this world scored with the patterns and brilliant with the hues of blue china.

There is no doubt that for countless centuries almost all known races of men practised the art of tattooing themselves, and, if the prettiest parrot finds the prettiest mate and bequeaths its rich hues to its chickens, why did not the best tattooed man and woman hand on, by heredity, the colors and embossed patterns of their skin. But, it would clearly be a mere waste of time and space for us to study the origin of art from the point of view of the evolutionists. One might quote a celebrated Greek writer and state that all art is the expression of man's imitative faculty and delight in imitation. We must therefore shun the whole obscure question of the origin of art and adopt the simple reason "that man betakes himself to art because he likes it."

We shall adopt, provisionally, the belief that the earliest art with which we are acquainted is the art of savages of contemporary or extinct races. Some philosophers may tell us that all known savages are only degraded descendants of early civilized men, but we shall argue on the opposite theory, that the art of the American Indians, for example, is really earlier in kind, nearer the rude beginning of things, than the art of the people who have attained to some skill in modern art. One of the oddest problems of early art rises before us in connection with the question already stated—"Is Art the gratification of the imitative faculty?" Now, among the lowest and worst equipped savages, art is both decorative and imitative. The patterns on Indian shields, clubs, pipes, etc., the scars which they raise on their own flesh, are very rarely imitations of any objects in nature. The Red Indians, like many aboriginal races, distinguish their family by the names of various plants and animals from which each family boasts its descent. Thus, if a Red Indian (say an Iroquois) is of the family of the turtle, he blazons a turtle on his shield, tepee, or head-dress, probably tattoos or paints his breast with a figure of a turtle, and always has a turtle (reversed) on the pillar above his grave. Anyone who will look through a collection of Indian weapons and utensils (pottery, etc.) will be brought to the conclusion that the native art is not essentially imitative; as a rule the decorations take the simple

form or shape of the "herring bone" pattern, or such other patterns as can be produced without the aid of spirals, curves, or circles. There is a natural and necessary cause of this choice of decoration.

The Indian working with tools made of flint, bone, or sharp shell, cannot easily produce any curved lines. Everybody, who, when a boy, carved his name on a fence or on bark of a tree, remembers the difficulty he had with the letters S and G, while he got on easily with letters like M and A which consist of straight lines. The savage artist had the same difficulty with his rude weapons in producing curves or spirals. Assuredly the races of the earth have wandered far have been wonderfully intermixed, and have left the traces of their art here and there on sculptured stone; but when two pieces of artistic work, one civilized, one savage, resemble each other, it is always dangerous to suppose that the resemblance bears witness to relationship or contact between the races.

The "Swastika," as it is called, the cross with right angles to each limb, is found everywhere, in India, Scotland, Greece, Peru, America, as a natural bit of ornament. The allegorical fancy of the Indians gave it a mystic meaning and the learned have built worlds of religious theories on this "Pre-Christian Cross," which is really a piece of hasty decorative work with no original mystic meaning at all.

Often we are asked "Where did they get inspiration?" One has only to travel through the magnificent forests, rivers, and lakes of northern Ontario, and study the wonderful effects of sky and water, also the flora and animal life of that paradise of nature, to be inspired with admiration for the art of the uncivilized Indian. Nature absolutely was the aboriginal Indian's God and instructor, as it should be with the modern child before the mechanical and college-taught teacher gets his grip on him or her, and moulds each into a machine with no personality or individuality.

Note the strong personality in the drawings and carvings of the ancients, every movement of their pen, brush, or chisel, suggests their daily life and actions, or has some mythical or religious meaning. This inspiration was very forcibly demonstrated or illustrated to the writer of this article. When, in company with Dr. Orr, I was paddling over the waters of one of our northern lakes on a beautiful morning in October, not a breath of wind and the water like a sheet of glass, we saw a perfect piece of Indian design, or rather, the origin of his design. To describe it would be almost impossible, but it so impressed me that I made some sketches of it; a reproduction of which appears on the opposite page.

Reflections of driftwood, stone, etc., on the low shore of the lake formed the most beautiful tracery or design for suggesting the work on Indian clothing and implements.

We have now to discuss the efforts of the savages to represent these designs of nature; and here we have to consider the purpose which animates him and the materials which are at his service. His pictures have a practical purpose, and do not spring from what we are apt, perhaps too hastily, to consider the love of imitation for its own sake. In modern art, in modern times the desire to imitate nature by painting or sculpture has almost an inborn instinct, and it does not seem at all unlikely that we inherit the love of imitative art from very remote periods. Such were the rude beginnings of human language, and whether this theory be correct or not, there are certainly practical reasons which impel the savage to attempt imitative art.

The legend of Manabozho.

As an example of Red Indian picture writing, we print a drawing from Kohl's book on the natives of North America. This rude work of art, though the reader may think little of it, is really a document as important in its way as the Chaldean clay tablets inscribed with the record of the Deluge. The coarsely drawn figures recall to the artist's mind much of the myth of Manabozho, the Prometheus, the Cain and the Noah of the dwellers by the great lakes. Manabozho was a great chief who had two wives that quarrelled. The two stumpy figures represent the wives, the mound between them is the displeasure of Manabozho. Further on you see him caught up between two trees from which the wolves and squirrels refused to extricate him. The kind of pyramid, with a figure at the top, is a mountain on which, when the flood came, Manabozho placed his grandmother to be out of the water's way. The somewhat similar object is Manabozho himself on the top of his mountain. The animals you next behold were sent out by Manabozho to find out how the deluge was faring and

Reflections in water suggesting origin of Indian design.

to carry messages to his grandmother. This scroll was drawn on birch bark by a red man of literary and artistic attainments. The Indians have always been in the habit of using this for the purpose of retaining their legends, poems, and incantations.

The popular idea of art as applied to tobacco pipes may be said to have its base in monstrosities in meerschaum, and vulgarisms in cherry and briar. The popular idea is natural, perhaps, but wrong, for it happens that in all ages and amongst all peoples, pipes have been the subject of ornamentation more or less tasteful, and of design more or less beautiful, original, and rare. The pipes of the Canadian Indians are made of various substances; different coloured lime, sandstone, slate, shale, quartz, and various clays being manipulated with much skill, one representing a wolf clasping a bowl, another two quaint figures kneeling and a turtle in relief, and others again representing frogs and turtles.

The ceremonial, or Pipe of Peace, was usually very highly decorated, the long stem being covered with a design beautifully worked in bird and porcupine

quills and feathers of various hues and colours: the design generally representing the tribe or chief by some emblematic figure. In respect to the arts of life, all those stationary tribes were in advance of the wandering hunters of the north. The women made a specimen of earthen pot for cooking. They wove rush mats with no little skill, and they spun twine from hemp by the primitive process of rolling it on their thighs. The masterpiece of Huron handiwork, however, was the birch canoe, about which a whole story could be written. Of pipes, than which nothing was more important in their eyes, the Hurons made a great variety, some of baked clay, others of various kinds of stone carved by the men, often with great skill and ingenuity, during their long periods of monotonous leisure. The collection of pipes in the Ontario Provincial Museum, is more complete than that of any other archæological museum in the world.

But their most mysterious fabric was wampum. This was at once their currency, their ornament, their pen, ink and parchment. No compact, no speech to the representative of another nation had any force, unless confirmed by the delivery of a string or belt of wampum. The belts, on occasions of importance, were wrought into significant devices suggestive of the substance of the compact or speech, and designed as aids to memory. The Hurons had, however, in common with other tribes, a system of rude pictures by which they could convey to each other information touching ordinary subjects of Indian interest. (Ont. Arch. Report, 1911).

The tribes of Mexico, as well as those of every part of the continent of America, delighted in the use of colour. It was very generally employed for embellishing the person and in applying decorative and symbolic designs to habitations, masks, shields, articles of skin, bark, and pottery, and in executing pictographs upon natural surfaces of many kinds such as cliffs and the walls of caverns. Colour was applied to the person for decorative purposes as an essential feature of the toilet for impressing beholders with admiration or fear. The native love of colour and skill in its use were manifested especially in decorative work. This is illustrated by the wonderful masks and totem poles of the northwest coast tribes. The pigments were derived from many sources, but were mainly of mineral origin, especially the oxides of iron and carbonate of copper. The aborigines were skilled in preparing the mineral colours, which were usually ground in small mortars or rubbed down on a small stone, and in extracting stains and dyes from vegetable substances. The colours were applied with a dry point or surface, as with a piece of chalk, charcoal, or clay, or, when mixed with water or oil, with the fingers or hand, stick, brush, or pad, and they were also sprayed on with the mouth.

Catlin tells the following story. On the opposite page is a (fac-simile) copy of the paintings on a Pawnee robe, the property and the design of a distinguished doctor or medicine man. In the centre he has represented himself in full dress on his favourite horse, and at the top and bottom, it would seem, he has endeavoured to set up his claims to the reputation of a warrior, with the heads of seven victims whom he professes to have slain in battle. On the sides there are numerous figures very curiously denoting his profession, where he is making his patients vomit and purging them with herbs. And here also he has represented his totem "the bear," and also the rising of the sun and the

Copy of Painting on a Pawnee Robe.

different phases of the moon, which these magicians looked to with great dependence for the operation of their charms and mysteries in effecting the cure of their patients.

Brushes were rude, consisting often of fibrous substances such as bits of wood, bark, or reeds chewed, beaten, or rubbed at one end until sufficiently pliable to deliver the colour. Hair was not in general use, although excellent brushes are now made by the more advanced tribes. The brushes used by the northwest coast Indians were often provided with beautifully carved handles.

Pictography may be described as that form of thought writing which seeks to convey ideas by means of pictures, signs, or marks more or less suggestive of the object or idea in mind. Although the earliest use of picture signs is shrouded in the mists of antiquity, although they have been employed by all uncivilized peoples, it is chiefly to the American Indian we must look for a comprehensive knowledge of their use and purpose. In the earlier stages of picture writing, when the savage artist sought to record facts and ideas, his picture signs assumed a literal form, and, so far as his limited skill sufficed, natural and artificial objects were portrayed realistically. Among the Indians of Canada and the United States the use of pictograph signs reached its highest development among the western tribes in their so-called calendar. These calendars are painted on deer, antelope, and buffalo hides.

The Dakota calendars have a picture for each year, or rather for each winter, while that of the Kiowa has a summer symbol with a picture or device representing some noteworthy event. In America there is a vast body of primitive and indigenous art, having no parallel in the world and, being uncontaminated by contact with the complex conditions of civilized art, it offers the best possible facilities for the study of the fundamental principles of development.

The laws of evolution correspond closely in all art, and, if once rightly interpreted, are traceable with comparative ease through all the succeeding stages of civilization. Embroidery was worked with quills of the porcupine or sometimes with those of bird feathers, and in both cases the stiffness of the quill limited freedom of design, making straight lines and angular figures a necessity.

The dyes, which varied in different parts of the country, were compounded variously of roots, whole plants, buds, and bark of trees. The quills were usually steeped in concoctions of these until a uniform colour was obtained—red, yellow, green, blue, or black. It was not uncommon for a woman to have in her work-bag several patterns drawn on bits of skin or bark, cut through to make a stencil. These patterns were drawn with bone, paint brush, or stick, on a skin or bark that was to be worked. A woman who was skilled in or had a natural gift for, drawing would copy a design by the free hand method, except that she would first make measurement in order that the pattern should be in its proper place and proportions. Some even composed designs and worked them out as they embroidered.

Nearly every tribe had its peculiar or special style of ornamentation. The dress of the men was more ornamented than that of the women, and the decorations the women put on the former were generally related to the man's employments—hunting and war. The figures were frequently designed by the men, who very often designated what particular figures they desired the women to work on their garments.

The decorative figures worked on the garments of children not unfrequently expressed prayers for safety, long life, and prosperity, and were usually symbolic. The art seems to have reached its highest development among those tribes in whose territory the porcupine was a native. It is doubtful whether any woman at the present day could duplicate the fine embroidery of a hundred years ago.

In concluding an article of this description it is interesting to look back and make comparison with the advanced artist of modern times, thoroughly trained and versed in all the traditions of the ancient and with a technique that is almost perfect. They form themselves into schools, thus introducing what we will call style, similar to the modes of fashion in clothing, changing with every generation, and thereby destroying all personality or individuality of design in the artist. In fact he becomes merely a machine following the dictate of some specialist in cube-ism, impression-ism, or some other "ism," so that his work is less intelligent and very uninteresting to the average public, and this they call the higher civilization. Then, for a relief and a few moments' real enjoyment, we hark back to the ancients for inspiration and originality of design.

TURTLE ROCK—ALGONQUIN PARK.

6th Paper.

This paper contains a selection of nature stories, with the exception of several, from a great variety of myths and tales that were collected in 1921 and the first part of 1922, mostly from the Rama Reserve, but some are from Garden Village (Indian), Sturgeon Falls, Ontario, and several from the Ojibwa Reserve at Dechain's Creek, North Bay, Lake Nipissing, Ontario, called Na-yah-bah-quang. And one story, evidently a modern addition, from Bear Island, Lake Temagami, collected by Susan Commanda, Ojibwa. The stories from North Bay were collected by Mrs. Exavier Commanda from her parents-in-law, Frank Commanda, Senior, Ojibwa name, Shobokesick=All Day or Through the Day, and Mrs. Isabel Commanda, Ojibwa name, Meshuk-onah-be-no-quah=Clear Morning Woman.

Turtle Rock is located on Catfish Lake, Algonquin Park, Ontario. Is estimated to weigh 30 tons, said to have been at one time an Indian god. It resembles a huge turtle like some prehistoric monster; see letter of G. W. Bartlett, Superintendent, Algonquin Park, 5th April, 1917. Indians were accustomed to, in former days, offer gifts of tobacco, food, etc., to the spirit or manitou, that they believed inhabited natural objects, such as large rocks, caverns, waterfalls, rapids, etc., to propitiate them for success in their journeyings and undertakings.

THE PARTRIDGE.

Told by Mrs. Exavier Commanda.

There was once a young man who fasted, as was done in the olden times. The old squaw used to take dry bread and water to him, and he had to fast for nine days, but this old squaw thought she'd keep him there longer, till one morning, the old squaw went to the camp, but could not see any one but a bird, and she told it "that it would be called a partridge by the Indians in time to come" and the stripes (cross bars), on the partridge's tail were the number of days the young man fasted, and the wide stripe (i.e., the last cross-bar on the tail), was when he became a bird, and he was told that he would live on the trees, and that the Indians would eat his flesh.

Note by G. E. L.—The name of the Partridge, Partridge in Ojibwa is Pee-nah.

Note by G. E. L.—Nos. 363-366 were collected by Mrs. Exavier Commanda, from Northern Ojibwa, from reserve on Deschain's Creek, near North Bay, Ont., called Na-ya-bah-quang.

No. 368.

STORY OF THE ROBIN.

(The Origin of the Robin.)

Told by Joe Yellowhead.

There was once upon a time, when an old Indian wanted his son to be learned something very powerful. The old Indian told his son he was going to make a nest a way up the pine tree, and so he did. He told his son to stay there, until he dreamed something very powerful, so he took his son way up the tree, and said to his son: "I will come over to see you and ask you if you dreamed strong things." Next morning he went to see his son, and asked him "What kind of dream he had? very strong things?" He said "Stay here, until you learn more!" This young man stays in the nest day and night, nothing to eat, for 10, 20, 30, 40 days. This young man he must be hungry! When the old man came to see his boy, he found a robin in the nest, singing, chee-up, chee-up. The old man didn't catch his son, the bird flew away. The end.

Notes by G. E. L.—Compare with No. 56, Page 388, Ojibwa Tales from North Shore Lake Superior, Wm. Jones, Vol. XXIX, American Journal, Folk Lore, No. CXIII, 1916.

In another Ojibwa version it is a girl fasting, that is turned to a robin.

No. 372.

THE CHUCK AND THE FISHER.

Told by Kenneth G. Snake.

Once upon a time, long time ago, there lived an old mother chuck, the groundhog, and she had some young chucks. When the winter came, and when they had awoke from their winter sleep, she used to go out and have her meals, but she wouldn't let her little ones out, she pretended that she was cold when she went in. She would gather some rotten wood and she would throw it into her home, and told her little chucks that there was a snow storm, she didn't want her little chucks to go out, because some one might kill them. So one day, Mrs. Chuck told her little chucks to look for lice in her head, and she fell asleep, and her mouth was wide open. Now she told her chucks that it was winter yet, but when they saw her mouth wide open they looked in it, and they saw little green bits of something in between her teeth, and when they were sure that she was asleep they said that it wasn't winter, so they went out, and when they got out the meadows were green, and they went out a little piece from their hole, and further, and further until they were far from their home. The fisher saw them playing about enjoying themselves, she at once ran after them and killed them and ate them. After a while, Mrs. Chuck awoke and she was surprised to see nobody in so she went out to search (for) them. She found them lying about some half eaten, and she knew who did it. It was Mrs. Fisher, so she at once started to look for the little Fishers, and when she found them, she ate them, and when Mrs. Fisher came home she found Mrs. Chuck feasting on her (the fisher's) children, so she ran after her, and she (mother Chuck), sprang to a cedar tree and

tried to make herself look like a ball and the fisher scratched it, and that is why the cedar trees sometimes have a ball some place near to the ground.

Note by G. E. L.—

Ground hog—Kukochees.

Fisher—Wee-gee-geege.

Cedar trees sometimes have an enlargement near the roots, like a large knot growing on the trunk, locally called "burrs."

No. 874.

SHEGEBIS THE DIVER.

Told by Kenneth G. Snake.

Once upon a time there lived a diver who didn't do what the law was, he used to have two women. They (the others, or other people, or beings) used to invite him to come (to their place), but he wouldn't go, he knew they were going to get one of his women, he would run to the shore with his women and the others would chase him around with their boats, but the divers would dive. And when the others knew that they couldn't catch them, they asked the blood suckers to suck up the lake, and there were three blood suckers and they sucked up the lake until it was dry and Shegebis had nowhere to hide, so the three (divers) ran around and were nearly caught, but they managed to get away each time, but they (the divers) couldn't find the blood suckers, but as Shegebis was running, he saw the whole three (blood suckers) lying on the stones, and he had to peck the first one, and the second one, and the third so the water came out. He pecked them so hard that the blood suckers burst and Shegebis dived with his women, and the ones that were running after them (chasing them) had just time to run to safety, and so that is why the shegebis has always two other shegebis that always hang around with him.

Note by G. E. L.—See Cingibis (No. 5), Pages 51-53, Memoir 71 Geol. Survey, Ottawa, Myths and Folk Lore of the Timiskaming, Algonquin and Temagami Ojibwa, by F. G. Speck.

No. 376.

KAGH, THE PORCUPINE.

Told by Mrs. Exavier Commanda.

It is said a porcupine is the swiftest animal there is, though it is the slowest when a person sees it, but if it wants to go it can go some. A man can't catch it, and, it is believed he, (the porcupine) is a manito (God or spirit).

One day a man made fun of the Kagh, (porcupine) and said to it "a Kagh is professed to be a god, but an Indian can be one too, if he wants to," with that he caught the porcupine by the tail and threw it away for a year or two. This man was (became) very poor, lost nearly all he had, and could not earn anything. A man should never make fun of the animals because there is a God—manito that takes care of all the animals.

Note by G. E. L.—Nos. 376-377 were collected by Mrs. Exavier Commanda from North Bay, Ontario, Ojibwa. See Menomini Folk Lore, No. 39, Page 426.

No. 329.

THE LITTLE MILL THAT DID GREAT WORK TO THIS DAY.

Told by Kenneth G. Sucke.

Once upon a time there lived a man, he was married and he was poor, but his father and his brothers were rich and they didn't care for him. It was near Christmas. He and his wife talked and thought how to get their Christmas dinner. There was an old woman living near and he went to her, and asked her if she knew something about getting rich. The old woman took him to a little room and there she showed him a little mill, and she showed him how to start it and how to stop it, and the old woman gave it to him. He took it home, and when he got home and his wife saw it she laughed at him, and said "What use is that (what) you brought here?" He started it without speaking to her and said "Fish" to the mill, they came out like straw from a blower (on a threshing machine), and a whole lot of other things too. His wife was surprised to see such fortune. When they were all ready for the dinner he went (and asked) his father and (his) brothers. They came and were surprised to see the table all set, just the way it should be. When they had eaten their fill one of his brothers asked him where he got the things (eatables) that they had, and he showed them the mill. The brother asked him if he wished to sell it, but he didn't want to sell it, but he said he would lend it, and his brother took it home. When the brother started it he said he wanted fish, and the fish came out till the floor was covered, but he didn't know how to stop it (the mill) and the fish came out of the windows (of the house, they were so many). He called his brother (the owner), who came and stopped it after a while. Men came over the oceans to see other lands and they heard about this mill, they came to see it, and they asked the Indian who owned it, if he would sell it. They were going to give him millions of dollars and so he let it go, for he wanted to be a millionaire. He told them how to start it, but he didn't tell them how to stop it, so they went away and put it on a big boat to take it home. When they were on the ocean there wasn't any salt so they started the mill and said they wanted "Salt" and the salt came out and out till it filled the boat. They told the mill to stop, but it didn't stop, and they didn't know how to stop it, so they had to throw it overboard, and to this day the mill is pouring out its salt, and so that's why the ocean is salty, and to this day some Indians believe this.

No. 330.

THE SUN'S FOOD.

Told by Mrs. Isabel Commanda.

In the morning before sunrise the sun is preparing his meals, first he eats the chickadee (*chic-chic-gana-shene*), which takes a short time to cook. Then we see the sun rising in the sky, after sunrise he is preparing the meat bird (*Kwe-gwe-shi*), which takes longer to cook. Then after the meat bird, he takes the partridge (*Benah*), which takes quite a while to cook, then his day's meals are done, and he sets in the west.

Note by G.E.L.—Nos. 380-381 were collected from North Bay, Ontario, Ojibwa, by Mrs. Exavier Commanda, from her mother-in-law, Mrs. Isabel Commanda.

No. 381.

THE MEAT BIRD.

Told by Mrs. Isabel Commanda.

It is believed by the Indians (that) if they want to find out if they are to kill any wild animals in one season, they kill this bird and put its feet near the fire, the skin to be pulled off (the feet). If the bird's feet have blood on the soles of the little feet it is a sign of good luck, and if they have a greyish color with no blood (it) is a sign of bad luck. This because the bird loves to eat meat.

Kwe-gwe-shi, is the Ojibwa name for this bird.

No. 385.

THE ORIGIN OF SEA-SHELLS.

Told by Mrs. Exavier Commanda.

Once upon a time, there were two grandsons. The old grandmother—Nokomis—took care of them. This old woman was a witch. This old woman wanted to get rid of these two boys and they knew, so they determined to run away from their old Nokomis (grandmother) so at night they ran off. They walked all night, by morning they reached the shore. They saw a gull—Kayoshk—sitting on a rock. They told Kayoshk to take them to some far off country where Nokomis can't get there, and Kayoshk the gull, consented. The oldest boy told Kayoshk "If the old woman's head sits on your head when it reaches us, just turn your head to one side and it will fall off"—it's the witch's power for its head to go about without the body—and they went off. When they got to the middle of the great lake this head reached after them. Kayoshk turned his head and the old witch's head fell down and broke into pieces, and they (the boys) said, that the pieces would be called "assance aug"—sea shells. And this is the end of the powerful head.

No. 386.

THE WOLF'S ORIGIN.

Told by Frank Commanda, Sr.

Once upon a time, a man had a son, one day they were having their dinner by the shore. This young Indian went out in the canoe and went to the point (a local spot), when he got there, the man called for his son, all he saw was an animal running out of the canoe and barking at him, and he said to his son "you shall be called a wolf—mahingan, by the Indians in time to come."

Notes by G. E. L.

Compare with No. 7, Ojibwa Myths and Tales, Page 74, Report 1915.

Nos. 385-386 were collected at North Bay, Ontario, by Mrs. Exavier Commanda.

No. 389.

SNAKE MEDICINE.

Told by Joe Cosh.

The story of an Indian, he wasn't very old, either. He was all the time going among the reserves of Indians, trying to find out everything about Indian medicine. There was one very bad old man in the Reserve, and he said to himself

"I fix this man that he won't be very long in this reserve with us, trying to find out about Indians and what they know about herbs." This bad old man took this young man to the bush and told him "You dig the roots of this," and he pointed to such a leaf and told him to keep it in his pocket, but this was a medicine for if a person is bitten by a snake, but nobody can carry that unless he is *bitten* by a snake. If you dig it for nothing you will see snakes, until they *bite* you. This young man kept it in his pocket and he saw snakes all around him, and some were going to climb on his legs, and he began to (get) frightened, so he got the bad roots and threw them away, and all the snakes went away from him. It was this bad old man that told him lies "that these were the best roots (medicine) for luck to get money." This ends the story of these two Indians.

Notes by G. E. L.

Re charms (medicine), Mr. Chas. E. Brown, Chief, State Historical Museum, Madison, Wisconsin, in a letter of 12th February, 1920, says: "I am pleased to learn of your investigations of the witch craft medicines among the Rama Chippewa. In my work among the Wisconsin Chippewa, I have heard some stories of the potency of charms (medicines), obtained by Indians, from old Indian women. These were curious and interesting. A young man was given a love charm which kept in his vest pocket had a tendency to draw his beloved to him. Another man received a charm which made him an always successful poker player, this he afterwards sold to another Indian for a good sum of money. An Indian going on a long journey over the trails received a charm which was to protect him, when he made his camp at night he found many snakes about, by strewing some of the powder about his fire and shelter in a circle he was able to drive them away. By enlarging the circle he was able to fully protect himself.

"There are many others like these, I have heard none concerning the 'witching' of whites."

No. 397.

THE MAN WHO WAS COOKED.

Told by Kenneth G. Snake.

Long time ago there lived a man who wanted to get married. He used to hunt for women, but he couldn't find any, so one day he was going away to some other place to look for one, on his way he killed a moose and he cleaned it and hung it (in a tree), and when he did that he said "I don't care what kind of woman I meet, even if she has legs on her head" so when he was coming out of the bush he saw a little hut nearby and he went in, and here's where he saw a woman with a leg on her forehead. The woman said "What do you want?" He told her that he wanted a wife. The woman said "I'll marry you," and the man said "allright!" He told her to make a fire while he went for the moose. The woman said she'd go after it, so he told her where it was and he watched her go out with one leg, when the woman was out he looked through a crack in the door. The woman pulled the leg from her forehead and put it on where it ought to be. Well, the minute she did that the man knew that she wasn't a woman at all, she was the devil. He watched him (the devil) go into the woods and then he ran away, but the devil caught him and boiled him in a large kettle, and to this day the kettle is seen on Moon River, but some white man—who didn't know what

it was—filled it up with stones, and nearly all of it is under water now, there are so many dams in the river.

Note by G. E. L.—The kettle is evidently a “pot hole” caused by the action of the water on the rocks near a rapids or falls.

Moon River is in Conger Township near Bala Park, Muskoka, and the “pot” is near the mouth of the river Card. 17th June, 1921, K. G. Snake.

It was customary for the women to carry home the game the men killed.

No. 398.

THE INDIAN WHO FOUGHT THE DEVIL AND THE SPIRIT.

Told by Kenneth G. Snake.

Once upon a time there lived a man where North Bay (now) is, and this man used to play cards all alone, and he used to play on a big stone, where he could see somebody (anybody) coming, and this time he was out there playing cards at midnight. He looked behind and he saw a man with fine clothes and he said to him (the stranger) “Would you like to play cards with me?” and (the other) said he would. Well, they started to play and every time he would beat (win from) this man who had the fine clothes. Well, when he (the stranger) was badly beaten, he said he’d like to fight, and they both jumped down (from the big stone) to the ground, and they started to wrestle, and he (the Indian) was kind of scared to put the other down, and the man with the fine clothes was the same, but the Indian put him down and there he kept him down, and he noticed something strange about that man, everytime he (the stranger) touched him (the Indian) he made a big scratch, and every time he’d scratch, the Indian would give him a blow on the eye, and, my, he scratched, and by day-break the man (stranger) was different. He had two horns and hooves, and a tail, and everytime the devil (formerly the stranger) touched the Indian it made a cut and it looked as if some one had hit him (the Indian) with an axe. He had to let the devil go, and when he let him go he didn’t see him anywhere. Then in about one month’s time, when he got better he was walking out in his garden thinking about the devil he had fought, when he looked up he saw a spirit or ghost, and he hit him on the face just as for fun, but he was flattened to the ground, the spirit hit him first. He jumped up and knocked the spirit down, and they kept on knocking each other down, sometimes he tried to wrestle with the spirit, and if he tried to grab the spirit he couldn’t catch him at all, so he had to use his fists. When daylight came he was fighting with the spirit, but he couldn’t see it. The Indian was like a fat man when he stopped fighting. He had swelled up from the blows of the spirit. About one week had past (after this) he said he was going to heaven so he started early in the morning, he was walking to heaven. Well, he got there somehow. He climbed upon the spider’s web. After he got there he began to play cards with the angels, and one of the angels said “I’m going to tell on you for bringing cards up here, I’m going to tell God about it.” but God said “Never mind, I gave that man that kind of life.” They say he’s in heaven yet.

No. 402.

HOW NANBUSH FIXED THE EYE OF THE OWL.

Told by Kenneth G. Snake.

Long, long ago when the world was young, there lived an owl (coo-cook-oo) and that's the only owl there was, and that owl used to find fault with every one. One day Nanbush came along to the forest and he hadn't anything to eat for a long time, and he called everybody, and he said to the animals and birds and every one "to sit down with their backs to him (Nanbush)," and, oh! Mr. Owl used to roll his eyes around and see what was at his back, and he wanted to know what Nanbush was doing, and Nanbush saw. If he (Nanbush) caught anybody looking he was going to fix their eyes. Mr. Owl rolled his eyes a little, but he rolled them quickly back because if Nanbush knew he would be punished, but Mr. Owl did it, and as he looked, Nanbush was pulling rabbit (wah-boose), by the ears and hind legs. The rabbit in those days had short ears and legs, Mr. Owl was seen looking, and Nanbush went after him and caught him. He made him (the owl) look in the same place all the time, and that's why a rabbit can't run, but jumps, and that's why the owl never rolls his eye to this day. He only turns his head to see what is at the back of him, and that is why owls don't come out in the day time, because he was so ashamed of himself, he doesn't want to come out in the day time.

No. 403.

THE RACE.

Told by Kenneth G. Snake.

Long, long ago, there was a race between the bears (mokwa) and the snapping turtles (mah-she-cay). The bears said they were going to eat up every Indian they saw, if they won the race, and the Indians won't run away, either, they just had to watch the bears eating, one by one, the Indians, and the snapping turtles were going to do the same to them ((?) the bears). The bears sat in a row with the Indians and they were going to have two races. The bears chose one of their best runners to run with the snapping turtle. It was winter, the turtles said that their chosen one shall go under the water, and they made holes in the ice, where they pretended the swimmer was going to look out of every once in a while, but there were lots of turtles, and there was one in every hole, when they got ready, the bear and the turtle were standing near the first hole and the second the (starting) word was heard the turtle went splash in the hole, and the bear was going (running), too, but he (the turtle) stayed where he was and the others (turtles), one by one, poked their heads out in the holes in front of the bear that was running, and at the very last hole the turtle there jumped out and cried out "I want water." He pretended he was very tired, well, the turtles won that race. The next day they were going to have a race in the field, and the turtles did the same. They made holes in the snow and at the last hole, the turtle jumped out again, and they won again. The Indians started to pound the bears on the heads and cooked them and the Indians and turtles enjoyed the feast, but a few of the bears ran away and that's why there's so few in the bush now, and that's why they all run away (presumably when they see a man).

No. 411.

THE STORY OF THE KING THRUSH BEARD.

Told by Susie Commanda.

Once upon a time there was a king who had a daughter, beautiful beyond words, but so proud and haughty that she thought no lover, who came to woo, good enough for her, not only did she send them all away, but made fun of them into the bargain. The king gave a great feast and invited all the bachelors from far and near. They were all made to stand in rows according to their rank. First came the kings, next the princes, then the dukes, earls, lords and gentry, and the king's daughter passed down between the rows to choose, but she had some fault to find with each of them. One, she said, was as fat as a wine barrel, another too tall and lean, "Long and thin has little in" she laughed, mockingly. The next was too short, "Short and thick is never quick," she quoted. Another was too pale, another too red, and another not straight enough. So she went on like that making fun of all, but in particular of a good looking king, who stood right at the top of the row. He wore a short beard upon his chin, and the princess pointed her finger at it and cried "He has a chin like the beak of a thrush!" and from that time he was known by the name of "King Thrush Beard." But the king was so angry that he declared that his daughter should marry the first beggar-man who came to his door.

Two days later a fiddler came singing beneath the castle windows, hoping to earn a few pence. When the king heard him he ordered his servants to bring him in, so the beggar-man came into the king's hall, clad in his dirty, ragged clothes, and sang to the king and his daughter, and when his song was ended he begged for charity, and the king said "Your song has pleased me so well that I will give you my daughter for a wife." The princess cried out in horror, but the king said "I took an oath that I would give you to the first beggar-man who came by, and I will keep my word."

The princess' pleadings were all in vain. A priest was sent for, and she and the beggar-man were married, there and then. Afterward the king said "It is not fitting that a beggar-woman should remain in my castle any longer, so you might just as well go away with your husband at once," so the beggar-man took her hand and led her away, she was obliged to trudge on foot. Presently they came to a wood and she asked "To whom does this beautiful wood belong?" "To King Thrush Beard" answered the beggar-man, "If you had taken him it would have been yours." "Ah!" sighed the princess, "If only I had, unhappy maiden that I am." Soon afterwards they came to a meadow, and the princess asked "To whom does this lovely green meadow belong?" and the beggar-man answered "To King Thrush Beard, if you had taken him it would have been yours." "Ah!" sighed the princess "If only I had, unhappy maiden that I am." Next they came to a great town and again she asked "To whom does this fine town belong?" "To King Thrush Beard," answered the beggar-man, "If you had taken him it would have been yours." Ah," sighed the princess "If only I had, unhappy maiden that I am." Then the beggar-man said "It is not very pleasant to hear you wishing for another husband, am I not good enough for you?"

At length they came to a little tiny house, and the princess said "To whom does this tiny house belong? What a wretched little place it is." The beggar man answered "That is mine and thine, the little home where we shall live together." The doorway was so low that the princess had to bend her haughty head to enter.

"Where are my servants?" she asked. "You will have no servants but yourself," answered her husband. "Come now, be quick and light a fire and put the kettle on to boil, I want my supper for I am very tired." But the princess knew nothing about lighting fires, or cooking food, and the beggar-man had to lend a hand himself, or he would have had nothing to eat. The next morning he made her get up very early, and do the work of the house, and so things went on for a day or two, and then when all the food had been eaten, he said, "Wife, we cannot go on like this, eating and drinking, and earning nothing, you must learn to make baskets," so he brought home willows to her and she tried to weave them into baskets, but the tough willows hurt her delicate fingers. Then said the beggar-man "This will never do, you better try spinning, perhaps that will be easier for you." So she sat down to spin, but the thread cut into her fingers so that the blood trickled down them. Then said the beggar-man "You are fit for no sort of work, I have made a bad bargain, but I will give you another chance, you shall take some pots to market and see if you can sell them." "Alas," said she, "If my father's subjects should pass by and see me selling pots and pans at the street corner, they will mock me." But all the same she was obliged to go, or she would die from hunger.

The first time every thing went well, the people bought the pots and pans just because the seller was so beautiful, many of them paying the price she asked and giving her back her wares, she and her husband lived for some time on the money she had earned, and then the husband bought a new lot of crockery, and she went to a corner of the market place, set out her wares, and waited for folks to come and buy her wares.

But suddenly a tipsy hussar came dashing down the market place right into the midst of her pots and pans and broke them into a thousand pieces. Then she began to cry "Oh! dear, Oh! dear, what shall I do? What will my husband say?" She ran home and told him of the misfortune: "Whoever heard of a person sitting at the corner of a market place when they had breakable goods for sale?" said he, "Well! It is quite plain that you are good for no ordinary kind of work, so I have been to the king's castle and have begged him to find you a place as kitchen maid. This they have promised to do and you are to have your food instead of wages." So the king's daughter was now compelled to go and serve as a kitchen maid, be at the cook's beck and call, and do the hardest and dirtiest work. In each of her two pockets she carried a little pot, and in these she put the scraps that were given her and carried them home, and upon this food she and her husband lived.

It happened that the king's eldest son was to be married and the poor princess crept to the door of the great hall that she might see some of the splendour of the wedding festivities. There, as she saw the lights flashing, and the noble people passing to and fro in their gorgeous clothing, she grieved from her heart that her pride and vanity had brought her to her present lonely lot.

The servants carrying costly food and drink, now and again threw her morsels and scraps in her two pots ready to carry home.

All at once the king's son entered, dressed in velvet and silk, and a golden chain about his neck. When he saw the beautiful woman standing in the doorway he seized her hand and would have had her dance with him, but she drew back with fear for she saw that it was King Thrusk Beard, the suitor whom she had refused with scorn. But her struggles were of no avail. He drew her into the great hall, when, alas! the string which held her pockets snapped, the pots

and food fell to the ground, and the soup and scraps with which they were filled went in every direction. Oh! How the people did laugh and mock at her. She could have sunk into the earth with shame. She sprang toward the door and would have run away, but a man caught her, and brought her back, and as she looked up she saw that it was King Thrush Beard. He spoke kindly to her, saying "Do not be afraid of me, I am the beggar-man with whom you lived in the little house; for love of you I disguised myself so. I, too, was the hussar who broke all your crockery, and all this was done that I might humble your proud spirit and make you love me." Then the princess wept bitterly; "I am not worthy to be your wife," she cried. But King Thrush Beard kissed her and said "Take comfort, dear wife, the evil days are past and now we will keep our wedding feast."

The maids-in-waiting came and dressed her in beautiful garments of gold and silver, and her father and his court all came too, and wished her good luck and happiness in her marriage with King Thrush Beard, and then the festivities began in right good earnest and all I can say is, that I wish you and I had been there to see them. End.

Note by G. E. L.—This is a recent acquisition to the Ojibwa, collected at Lake Temagami (Bear Island).

No. 413.

WHY THE PERCH CAN'T KILL SUCKERS.

Told by Mrs. Eavier Commanda.

There was an Indian boy named "Saw-wance." He was about sixteen years of age.

He was told not to kill the suckers for nothing, only what he wanted to use for his meals, but he did not obey "Nokomis" (his grandmother). He killed more for nothing.

One day he met two fine looking young men near the portage, and these men fought him near the portage, to throw him in the river, but he beat (bested) them. He threw the two men down at last. He did not know it was the suckers he was fighting with. That was all he saw when he threw them down. His grandmother told him not to mind the suckers any more. Saw-wance means perch, and he never was able to kill any (suckers) although he tried hard.

Note by G. E. L.—This is a personified story.

Perch.—*Perca Flavesceus*, Ojibwa name Saw-wance.

Sucker.—(Common)—*Cata-stomus commersonii*, Ojibwa name Nemahbin.

No. 416.

WHY THE BUFFALO HAS A HUMP.

Nanbush Story No. 31.

Told by Kenneth G. Snake.

Long, long ago, the buffalo hadn't any hump. It was in the summer that he got the hump. He would race across the prairies for fun and the foxes would run a long ways ahead, and tell all the little animals to get away, that their lord (the buffalo) was coming. They didn't know that Nanbush was around there. So the buffalo raced across (the prairies). Little birds live on the ground and

the buffalo raced in that direction and tramped the birds nest and the little birds told him that he was going where the nest was, but he didn't heed a bit, and they were making a noise, crying for their nest, and when Nanbush heard them he ran ahead a little piece, ahead of the buffalo and foxes and stopped them. He had a stick and he hit the buffalo on the shoulders and the buffalo humped them up fearing that Nanbush would give him another blow, but Nanbush just said "You shall always have a hump on your shoulder and always carry your head low for shame." The foxes ran away and dug holes in the ground where they hid themselves, and Nanbush told them "To always live in the cold ground for their disobedience to the birds," and that is why the buffalo have humps now, and the foxes have holes in the ground as their homes.

No. 419.

HOW NANBUSH MADE A HOUSE FOR A TORTOISE.

Nanbush Story No. 32.

Told by Kenneth G. Snake.

Long, long ago, when the world was young there were only two tortoises, and they didn't have their shells or their houses on their backs. They were all soft. It was this way that the strong began to hunt the weak ones, and the otter was going to eat the tortoise. One day the tortoise was going on land to take a walk, he didn't run fast, as he looked to see if the way was clear he saw the otter coming, so he just turned and crawled under a piece of bark, and then drew his head, legs and tail in, and when the otter was gone he went back to the pond where he lived, and he didn't know that Nanbush was watching him, how he saved himself. One morning Nanbush was out fishing, he asked the tortoise where the fish was plenty, he said "If you tell me where there's plenty I'll give you a house that you can carry on your back." Soon as the tortoise heard this he dived and looked for the spot where the fish were plenty, and in a little while he was back again, and told Nanbush where there were plenty of fish. Nanbush thanked him and got out of his boat with the tortoise and took him where there was a bit of bark and then he put it on the tortoise's back, and a piece on his stomach, and then they watched for the otter to come, and when he was coming the tortoise went and met him, and pretended that he didn't see him coming. When the otter saw the tortoise he sprang at it, and the tortoise only drew his head, legs and tail in, so that the otter didn't have a taste of him. After the otter went away, Nanbush told the tortoises that "From this day on every tortoise shall bear his shell or his house along wherever he went."

Note by G. E. L.—

Turtle.—Ojibwa name Me-squad-as.

Otter.—Ojibwa name Ne-gig.

No. 421.

NANBUSH AND THE MUD TURTLE.

Nanbush Story No. 33.

Told by Mrs. Exavier Commanda.

Once upon a time, the mud turtle had none of that hard stuff on his back, and they would have been all done away with if Nanbush hadn't pitied him. Nanbush was sitting by the side of a mountain on a big rock by the valley and there

came this turtle weeping that there will soon be no friend of his own kind, pretty soon, and Nanbush spoke to him and asked him what was the matter, and he told Nanbush his story, and Nanbush said "If you will only listen to me, my child, I will help you out when the stork (crane) comes. Creep under two big (pieces of) bark, and don't stick your head out till he passes by. When he has gone past you can go your own way, and you will be delivered from harm after this." When the stork came mud turtle did as he was told, and to his surprise he had a little house on his back and where ever he went he carried this house with him, and you can see him to this day that he has his house with him, put up by Nanbush in a wonderful manner.

Note by G. E. L.—Ojibwa name for crane is Shickee.

No. 124.

WHY THE BIRCH BARK IS SPOTTED.

Nanbush Story No. 34.

Told by Kenneth G. Snake.

Long, long ago, when Nanbush was living, he was out hunting. He killed a lot of deer and other animals and he put them in his hut, and there was no door to it, and he thought it was safe in there when he went out looking for some more (game). All the birds came and ate up what he had. In the evening when he came home he found that this meat was all eaten and he looked all about in his hut, and in one corner he found the birds half dead, because they ate too much. There were some birch trees nearby and he went over to them and asked them "Why they didn't watch his meat?" And of course, the trees couldn't talk when he spoke to them, so he got mad (angry) and he went to a balsam tree and cut all the branches off and then he started to whip the birch trees and every time he hit all the things that's in the balsam (needles) stuck to the bark, and it made him more cross and he shook them off and when they came off they left marks, and he got so furious he ran in his hut and got all the birds and threw them against the trees and they didn't come off because he threw them so hard, so he found that when he got mad it was no use trying to clean the trees, so that is why the birch trees are like that in some places. The spots (on the bark) nearly look like crushed birds.

Notes by G. E. L.

Re spots on birch-bark, see page 83, and fig. 3. Notes on Timagami Folk Lore, Memoir 51. No. 9, Anthropological Series, Geological Survey, Ottawa, Ontario, 1915.

The small specks and stripes on the birch bark were caused by the balsam needles, when Nanbush struck the birch with balsam branches.

Re trees not answering Nanbush, this is contrary to the usual custom, for Nanbush had the power that all things, animals or inanimate, had to answer him when he spoke to them.

No. 425.

WHY THE PORCUPINE HAS QUILLS.

Nanbush Story No. 35.

Told by Kenneth G. Snake.

Long, long ago, when Nanbush was around the porcupines had no quills on them. A porcupine was out in the woods when the bear came along and would have eaten him, but he managed to climb to the top of a tree where the bear couldn't get him. The next day he was out again and he went under a hawthorn tree and he noticed how the thorns pricked him. He began to break branches off and put them on his back, then he went into the woods and along came the bear. He (the bear) sprang on him (the porcupine). The porcupine just curled himself up, and the bear had to go away for the thorns pricked him very much. Nanbush was watching them. He called the porcupine and asked him "how he knew such a trick?" The porcupine told him, and how he was in danger when the bear was near. Then Nanbush took some thorns and peeled the bark off till they were all white, then he put some mud (clay) on the back of the porcupine and then stuck the thorns in it, and then he made it as a skin, and then he told the porcupine to go in the woods, and when he got there, and Nanbush had hid himself behind a tree, along came the wolf who sprang on the porcupine and then ran away because of the quills, and the bear didn't go near him because he was afraid of those quills, and this is why the porcupines have quills to-day.

No. 430.

INDIANS WHO TURNED INTO BLACK SNAKES.

Told by Kenneth G. Snake.

Several years ago there lived a family on an island up north. This island is big and in it there is a little lake or pond. One day the old man was thinking of fishing in this pond, but there were no fish in it, and there was no creek to it, and one day this old man would just try to fish in it, after a while he caught a big sturgeon with no tail to it, which he was surprised to catch in that pond. Anyway he said "they would eat it." While the mother was cooking it, the eldest daughter went paddling in her canoe round the island. When she came back to have dinner she saw all her brothers and sisters were turned into big black snakes, and her father and her mother were just half turned into black snakes. So the mother had a chance to speak, and she said "Go, my daughter, before you are turned into a snake. When you hear us crying or yelling you'll know somebody will die, of the Indian (Ojibwa) tribe." And whenever they hear them (the snakes) somebody dies, and that island to this very day is filled with those black snakes, even in the coldest day in winter. This island is called Manito-negong, and is in Lake Nipissing.

No. 440.

WHY THE EAGLE IS BALD HEADED.

Nanbush Story No. 36.

Told by Kenneth G. Snake.

Long, long ago, when Nanbush was on earth, he was walking about the woods, when he saw an eagle flying about. He called it, but the eagle wouldn't come to him. He got mad (angry), he made himself look like a big bird, bigger than the eagle. Then he rose to the sky and made a cry that made the eagle fly up and up. He flew up after it, way up past the clouds, but on they went with Nanbush behind the eagle. Then it began to get warm near the sun. It got hotter and hotter. At last the eagle got burnt on the head going too near the sun, so they had to fly down, and Nanbush caught the eagle and took it to the ground, and told it "You shall never have any feathers on your head again, and you shall never come down close to the ground or you'll be killed." and that is why some eagles have bald heads.

Note by G. E. L.—Nanbush had the power that when he spoke to animals, or inanimate things they had to answer.

No. 441.

THE OLD WOMAN AND THE SERPENT.

Serpent Story No. 12.

Told by Kenneth G. Snake.

Several years ago there lived an old woman not far away, who used to know a big serpent. The serpent was in Lake Joseph, and in the summer she would go there to see her serpent, and she would go and buy some meat in a store and come back to feed the big snake that was in the water, and she said "if she missed one summer one of her cousins would die." It was as if the serpent was eating all the cousins. And this went on all the time, missing one summer, and then she would see it again. Soon all her cousins were dead, then it came to her son. Next year her daughter was dead. Then she worked hard to feed the serpent. She was alright for five years. Every time there was a thunder storm this old lady was scared because the serpent, she knew, was afraid of the thunder. Then one year she forgot to go and see the serpent, then she died. The old lady I am telling you about was Mrs. Elisabeth Shilling (Ojibwa woman).

Note by G. E. L.—Lake Joseph is in Muskoka, Ontario.

No. 442.

THE BOY THAT TURNED INTO A WOLF.

Told by Kenneth G. Snake.

Long, long ago, two little boys were playing together near a bank (of the river), one boy saw that the other side was much prettier, so he swam across, but the other one could not swim, and the boy that could not swim took the canoe over and he played along the shore and then he went away and forgot all about his brother. One day he went back to see if he was there, when he was a little way off he heard him crying like a cat; he thought it was so. He went on, when he got to the shore he saw him (his brother) sitting as before, only he was like a big dog, but he spoke to it "I shall call you wolf," and the boy that was changed said "I am going to eat you if you don't go away" so the boy had to run away, and that was the first wolf. Mah-eng-gan.

HOW THE BEAVER INDIANS REGAINED SUMMER

By Mr. Bourassa, Fort Vermilion.

Once upon a time the Beaver Indians lived together in one great camp in the Peace River country. The widows were segregated from the main camp by means of a trail which divided and kept them apart from the rest of the Indians. Moose were plentiful and the widows' work was to dry and prepare all the skins and work them into mocassins and other articles needed by the tribe. One night the widows heard a baby crying and searching around they found a little boy lying in some moss. Enquiry was made all through the main camp but no one claimed the baby. One of the widows adopted the little one and in due time he grew to manhood and became a great prophet. He exercised a wonderful power over all the animals and by means of speaking could make them subservient to his will. One day the prophet told the Beaver Indians that the people living in the south-west had taken away their summer and that was the reason their country was so cold. A little later on the prophet started for the west taking with him a small party of Beaver Indians and several animals. They travelled on and on and finally reached a wall which barred further progress. The wall was white and very high and in length appeared to be unending. The prophet directed the beaver to try and cut through the wall but after blunting his teeth he had to give up. The crane was then instructed to try and punch a hole and was successful in getting his bill and neck through but in doing so lost the long feathers from his neck. He persevered until he had made a large enough hole for the prophet and his party to crawl through. The prophet then explained to his Indians that the summer was kept in a bladder basket and was suspended from a tree which was guarded day and night by two old women. In order to find out the strength of the people the prophet said to the night owl you can see in the dark so we will wait for the night then you will find the people living alongside a lake. The owl carried out the instructions given and on his return said the people are too many for us to try and take the summer from them; they are well provided with canoes and paddles and bows and arrows.

After hearing the owl's story the prophet said we will try and take our summer from them by stratagem and not try fighting and the following plan was outlined. The beaver was instructed to enter the lake and under cover of the water to approach the canoes and gnaw a hole through each one and to partly bite through every paddle. The mouse was told to cut nearly through the string of each bow. The fisher was told to get as near the tree as possible and be in readiness to climb the tree and secure the basket by cutting through the cords which secured it to the tree. After this was carried out the Caribou at break of day would run between all the camps and excite the dogs and after doing this he was to take to the water for, said the prophet, you are a good swimmer. After the prophet had explained the plan the beaver and mouse started off and carried out their part. At break of day the Caribou ran in and out of all the camps and was chased by the dogs who by their own barking aroused the whole camp. The Caribou having successfully done his part took to the water and made his escape. The fisher followed in the wake of the Caribou and while the dogs were chasing that animal he climbed the tree and secured the basket. In the meantime the people followed the dogs and when they saw the Caribou take

to the water rushed for their canoes, but also when they had started each boat began to fill with water and each paddle broke off short when used in the water. They then attempted to shoot at the Caribou but here again the bow strings parted and they could do nothing and under cover of all this excitement the fisher escaped from the camp with his precious basket. Needless to say the attention of the two old women guardians of the tree and summer in the basket was diverted to what was taking place on the water. In due time all reached the prophet who took the bladder from the fisher and retracing their steps and after passing through the wall the prophet pointed the bladder toward the north and burst it. Summer thus liberated reappeared in the North once more and the wall in process of time became the Rocky Mountains.

NEW ACCESSIONS TO MUSEUM

The new accessions to the Ontario Provincial Museum during the past year have been very numerous as may be seen from the catalogue. In fact, so great have been those acquisitions that we have not been able to secure sufficient space for exhibition purposes. The late G. J. Chadd of Trenton, Ontario, spent nearly half a century collecting material from Prince Edward County and the surrounding counties. Mr. Chadd stored all his material in a large museum building expressly built for the purpose. This museum contained the finest private archaeological collection in Canada. Here also he collected and housed fossils, illustrative of the entire district, estimated at considerably over half a ton; a large biological collection, and in addition nearly all the implements used by the first settlers in this district. Mrs. and Miss Chadd felt the burden of looking after the museum was getting too great and they were very anxious that the collection should not go out of their native province. So the province is indebted to Dr. Grant, Minister of Education, Mrs. and Miss Chadd, and the Rev. Canon Young for the securing of the same for the Ontario Provincial Museum. The new accessions for this year to be described, will be selected from the Chadd collection. This collection not only represents the artifacts from the Bay of Quinte district, but also those of many tribes in New York State. Wellers Bay and the mouth of the Trent river were the ports on the north side of Lake Ontario through which passed not only the Iroquois hunters whose fields were all situated in eastern Ontario and extending north of Nipissing and Lake Timiskaming. It was also the portage used by Iroquois war parties going north-westward to the Huron country. Therefore many of the artifacts illustrated will be traceable to the tribes of New York State.

The following bird amulets are all from the Chadd Collection.

No. 38480. From Wellington, Prince Edward County. Made of light-colored banded slate, with two holes, one at each extremity. It has a flat base, as usual, two inches in length by nearly one inch in width.

No. 38477. Also from Wellington, Prince Edward County. Made of Huronian slate, with only one hole, which was at the front extremity but is broken out, the weight of the article having been too great for the frail perforation. It has greatly exaggerated eyes to indicate powerful eyesight on the part of the bird represented. The flat base is three inches in length and nearly one inch in width at the broadest part, which is at the rear extremity.

No. 38478. From Picton. Made of beautifully banded Huronian slate, with only one hole at the front, like the preceding example. It also has exaggerated eyes. The flat base is three inches in length and one inch wide at the broadest part at the rear extremity.

No. 38467. From Trenton Mountain. Made of beautifully mottled slate, with two holes, one at each extremity. The flat base is two inches in length by three-quarters of an inch wide.

No. 38466. From Trenton Mountain. Made from dark-colored, banded slate that takes a fine polish. It has two holes, one at each extremity. The flat base is three and a half inches long and half an inch broad.

No. 38470. From Wellington, Prince Edward County. Made from banded slate. It has much exaggerated eyes but the base is too narrow for any perfor-

ations for suspension. The imperfectly flat base is slightly curved upward at each end, with a length of three and three-quarter inches, but it is nowhere quite half an inch in width.

No. 38469. From Wellington, Prince Edward County. Made of light-colored slate. It had exaggerated eyes, but the head is somewhat fractured. It has two holes, one at each extremity. The perfectly flat base is three inches and three-quarters long and three-quarters of an inch broad at the widest part at the rear extremity.

No. 38461. From Indian Island, Bay of Quinte, Prince Edward County. Made from banded slate that receives a high polish. It has two holes for suspension in carrying, one at each extremity. Its flat base is two inches and a quarter long and an inch and an eighth broad at its central part where it is widest.

No. 38462. From Big Island, Bay of Quinte. Made from dark slate faintly banded. It has two holes as usual but both are broken out, and a second hole made at the front, which also is broken out. It has exaggerated eyes, which are so common amongst these amulets. The flat base is three inches and a half long, and half an inch broad.

No. 38479. From Lot 22, River Road, Trenton. Made from very dark slate (banded). It has likewise exaggerated eyes. The two holes are of excellent workmanship. The irregularly flat base is two inches long and an inch and a half broad at the central part.

No. 38463. From Big Island, Bay of Quinte. Made from Huronian slate with banding less distinct than in most cases. It has exaggerated eyes. The irregularly flat base is two inches long and an inch and three-quarters broad at the central part.

No. 38475. From Wellington, Prince Edward County. Made from dark banded Huronian slate. It has two holes, one at each extremity, well formed. Its flat base is three inches long and three-quarters of an inch broad.

No. 38465. From Trenton Mountain. Made from banded Huronian slate. It has two well-formed holes, one at each extremity. Its flat base is three inches and three-quarters long and only three-quarters of an inch broad.

No. 38474. From Wellington, Prince Edward County. Made from banded Huronian slate, and has two well-formed holes. The flat base is three inches and a quarter long and three-quarters of an inch broad.

No. 38464. From Big Island, Bay of Quinte. Made from banded Huronian slate, with dark shades. The head and the tail are lost. It has two well-formed holes. The flat base is two inches and three-quarters long and an inch broad at the central part where it is widest.

No. 38471. From Wellington, Prince Edward County. Made from banded Huronian slate. The head is lost, and the fracture has been smoothed. It has two holes well formed and buttressed by ridges left upon the base. The irregularly flat base is two inches and a half long and an inch and a quarter wide at the widest part.

STONE PIPES.

No. 39143. The interesting effigy pipe from Picton, shown at the first of this group, represents an owl. The back of the bird is fluted, as in so many other examples of these effigy owl pipes. The owl's talons are represented in

No. 39,143
No. 39,328

STONE PIPES—Full Size.

No. 39,142
No. 39,139

the usual way found in bird pipes, and are perforated for the insertion of a string or other support. The pipe is made from a soft, workable stone of grey color, and a stem, more than an inch in length, has been worked from the material, which had proved so suitable for working into any shape by the maker.

No. 39141. A small black stone pipe, of a broad type, also comes from Picton. The material from which it is made has taken a good polish.

No. 39142. The pipe represented is also from Picton, and is made of grey stone that has taken a good polish. The bowl makes a very broad angle with the stem, the deviation of the former from the line of the stem making only about half of a right angle.

No. 39197. This fine specimen of the platform pipe comes from Wellington in Prince Edward County. It is made from a grey stone and has a long, slender base, four inches and a quarter in length. Pipes of this class have been found most commonly amongst the remains of the "moundbuilder" Indians of the Ohio Valley and adjacent parts, and were formerly attributed exclusively to those people, but examples of the same type have been coming to light in a wider range of territory than was at one time known.

No. 39328. This is another platform pipe made of similar material and having the same shape as the last example. It comes from Picton, near the same place as No. 39197, but one arm of the base has disappeared and a part from the lip of the bowl. Notwithstanding this, it is a good specimen of the "moundbuilder" pattern.

No. 39139. An interesting grey stone pipe from the Carrying Place. Besides the cording worked around the top of the bowl, and a number of flutings worked into the base, it has eleven dots drilled into the material on the side shown, and five long scores on the opposite side.

No. 39205. A black stone pipe from Wellington in Prince Edward County. The stem makes a very broad angle with the bowl; in fact, the bowl is only slightly bent out of the line of the stem, and it might almost be called a tube pipe. There is a perforation in the base near the bend, besides the usual stem hole.

No. 39149. A stone pipe having an interesting and unusual shape. It comes from Picton and it is made from a variegated black and grey stone. The bowl is differentiated from the rest of the pipe by two scores which meet at a point, as shown in the engraving. A cross section of the pipe makes a triangle, almost right-angled, with the right angle along the base.

No. 39199. This pipe contains similar material to the last example, but a cross section makes a quadrilateral instead of a triangle. It comes from Wellington in Prince Edward County. The bowl makes a sharper angle with the stem than in the last example.

No. 39204. A black stone pipe also from Wellington. The cross section makes an oval. The angle of the bowl with the stem is broad, as in so many examples of these stone pipes.

No. 39148. This well formed specimen was carved from grey colored stone, locality, Picton. It has a circular cross section, and the angle of the bowl with the stem is also very broad.

No. 39459. This pipe has a most interesting shape, as the bowl culminates in four knobs, parts of which have been slightly knocked off but rebuilt by a former owner of the specimen. It is carved from light grey stone. It was

No. 39,214

found upon Bald Head, the north end of the long spit or beach which encloses Wellers Bay, near the neck of Prince Edward County, or Carrying Place. There is a small hole perforated through the tip at the bottom of the pipe.

No. 39325. This is another pipe of the platform pattern, made from dark colored stone, slightly different in the shape of the bowl from the former specimens. It was found in Murray Township.

No. 39326. This pipe is a specimen of the well known bottle-stopper pattern, made from drab-colored stone. It comes originally from the Carrying Place in Prince Edward County.

CLAY PIPES.

No. 39241. This specimen has a human face effigy on the front and another on the back, of the bowl, but neither of the faces shows much skill in workmanship. The design and the markings on the sides are interesting, similar ones being rare. Locality, Wellington, in Prince Edward County.

No. 39346. This has but one human face effigy, facing the smoker. It is better formed than the last example, and has two prominent hair knobs. The mouth is open, as often occurs with this class of effigies. This pipe comes from Indian Island in the Bay of Quinte, (a small island of ten acres, or less, situated only about a mile off the carrying Place).

No. 39243. This is another pipe from Wellington, in Prince Edward County. On the bowl there is a small full figure effigy apparently intended to represent a human form climbing a tree.

No. 39211. The bowl decorations of this pipe are a belt of cords or grooves and a row of dots. The specimen also comes from Wellington.

No. 39163. The human face effigy on this pipe has been formed with rather more skill than any of the preceding specimens, and is an unusual and striking example of American Indian art. It comes from Picton.

No. 39214. This is also a good specimen with a curved and slender stem. Some red paint, with which it had been smeared, still adheres to parts of the bowl. It comes from Wellington in Prince Edward County, from which many of the other specimens have been obtained.

SMALL STONE IMPLEMENTS.

A number of small stone implements, triangular in shape, are in the Chadd Collection. Articles of this kind are sometimes classed with the chisels, but they are not capable of bearing much strain, from the weakness of the stone material of which they are made.

No. 39789 is made from a light grey, granular stone, with a length of one inch and seven-eighths. It comes from Lot 21, Concession 3, Hillier Township.

No. 39788 also from the same place, is also made from granular stone, but has a finer texture than the last example. It has the same length.

No. 38591 is of still finer texture than the two preceding, and dark grey in color. Its length is two inches and a quarter. This specimen is from Bald Head, as are also the three following.

No. 38590. This specimen is made from a purplish colored stone, and has a length of two inches and three-quarters.

No. 38682. The specimen is drab-colored and has nearly the same length as the next preceding.

POTTERY—Full Size.
No. 39,704

No. 39,906

No. 39,936

No. 38589. It is made from a blackish-colored stone, two inches and three-quarters in length.

No. 38813 is the only specimen in this group made from banded slate. It is more pointed than the others, and has a length of three inches. It comes from Lot 3, Concession 1, Hallowell Township, near Wellington.

ICE PICKS.

Several very interesting ice picks of smooth stone are included in the Chadd Collection.

No. 40051. This specimen is sharpened at both ends like a chisel or axe. It is made from dark grey stone and has a length of eleven and a half inches. It comes from Consecon in Prince Edward County.

No. 38805 has round tips but one end has been fractured off. The implement is now 13 inches in length. The material is black stone. The specimen comes from Lot 3, Concession 1, Hallowell Township, near Wellington.

No. 39321. This specimen is also sharpened round at both ends. It is made of dark grey stone and has a length of fourteen and one half-inches, the longest specimen in the group. It comes from Hillier Township.

No. 38804. This pick is sharpened flat at both ends, and is made from black stone. Its length is fourteen inches. It comes from Lot 3, Concession 1, Hallowell Township, near Wellington.

POTTERY.

The pottery used in the locality in which the Chadd Collection was formed had evidently been elaborately decorated, as appears from the fragments that accompanied it.

No. 39704 is a pot ear bearing a human face effigy. This kind of decoration is not common. The specimen is from Ameliasburgh Township.

No. 39906 is another pot ear very highly ornamented. This comes from Wellers Bay.

No. 39936. This specimen is unique in having a row of knobs formed by pushing a pointed implement against the inside of the plastic clay pot. In addition to this, and a series of cordings around the top, the specimen is covered with minute dots made by a very fine point. It also comes from Wellers Bay.

The large fragment at the bottom of the group has been most elaborately worked.

Arthur C. Parker, M.Sc., State Archaeologist of New York, says:—

“The top sherd and the one below it and to the right are 17th century Iroquois products.

“The padded design sherds are Algonkian. The fact that the two designs were found on one site only means that two pots, from the hands of different peoples, were broken on the same spot.

“The Iroquois design is typical of the period 1600-1620, the modelled face being a good clue.

“The stamped Algonkian pattern, no doubt, has the decoration carried down inside the lip.

“Each of these designs is as distinctive in origin as a French vase is from one from Japan.”

BARBED BONE SPEAR-HEADS—Full Size.

BONE COMBS—Full Size.

No. 41,375

No. 40,593

No. 39,516

BARBED BONE SPEAR-HEADS.

No. 39729 has six barbs and the perforation for a cord. It is a very complete specimen, thus being an exception to the rule. It comes from Bald Head near the Carrying Place. Harpoons of this kind are a numerous class in Canada, but they seldom have so many barbs as this specimen, and are rarely so well preserved and complete.

No. 39653. This is only the fore part of the harpoon, and the same must be said of the other four specimens, showing the uncertainties of this class of implements. There are four barbs on this remaining portion. It comes from the Sand Banks, Prince Edward County.

No. 39658 has four barbs, and is also from the Sand Banks.

No. 39655 comes from the same place but has three barbs.

No. 39660, from the same locality, is the tip of a spear on which only two barbs are left.

No. 39731 is the fore part of a large spear, containing four barbs. It comes from Bald Head.

Out of six specimens only one is complete, which gives the student of aboriginal life an idea of the mishaps to which the harpoon is liable.

BONE COMBS.

No. 41376. This comb has a length of three inches and a half, and its design bears evidence of aboriginal workmanship. It comes from the Carrying Place.

No. 40592 is six inches in length, and comes from Smokes point, Wellers Bay. The striped breeches and the toque on the head of the human figure indicate an early French origin of this specimen.

No. 41375 has a total length of eight inches, being more than the usual length of combs, and the long, slender teeth form the chief part of the specimen. It comes from the Carrying Place.

No. 40593 is four inches and a half in length, but its material is much corroded with age or weathering. It comes from Smokes Point, Wellers Bay.

No. 39516. This unique specimen is five inches and a half in length and comes from Bald Head. The design is well worked and represents two osculating bears.

SMALL SHELL PENDANTS.

The first five specimens in the engraving are bird beads (Nos. 39820, 39819, 38628-29-30,) and have lateral perforations (one in each) through the neck, for the purpose of suspension on a string. Each seems to represent a swimming water-fowl, probably a duck.

The small crescent at the bottom of the engraving has two perforations, and has the curve of the original shell from which the specimen was made. Crescents of this kind were used to intersperse with beads in making strings of beads.

These specimens are white, and have designs carved upon them by a pointed tool, the effect in some cases being artistic.

WAMPUM AND OTHER BEADS.

No. 39385. Beads of shell, pipestone, etc., having a variety of colors. They are of various lengths and shapes, one of them being three inches and a half long. There are some glass beads from traders amongst them, but the majority are of aboriginal workmanship. The columella of large shells was used to form some of the beads. They form a long string, and are from the Carrying Place.

No. 39816. These are shell beads of larger sizes than most of the preceding, white and of aboriginal make. They come from Ameliasburg Township.

No. 38615 consists of shell beads with a few bone ones, but of smaller sizes than the next preceding. They have a variety of colors. Locality, Picton.

SMALL SHELL PENDANTS—FULL SIZE.
Nos. 39,820, 39,819, 38,628, 38,629, 38,630, 41,377.

 39428-39437—Arrow-heads, Wellington.
 39438—Curved flint implement, Wellington.
 39439-39446—Slate arrow-heads, Wellington.
 39447—Thirty-three leaf-shaped chert specimens, Bald Head.
 39448—Arrow-head (quartz), Bald Head.
 39449—Arrow-head (chert), Bald Head.
 39450-39451—Arrow-heads (quartz), Indian Island, Prince Edward Co.
 39452-39454—Bone awls, Bald Head.
 39455-39458—Awls (antler), Bald Head.
 39459—Stone pipe, Bald Head.
 39460—Clay pipe, Bald Head.
 39461—Fragments of bone comb, Bald Head.
 39462-39466—Stone axes or adzes, Bald Head.
 39467—Scalp Lock.
 39468—Glass beads, Carrying Place, Prince Edward Co.
 39469—Brass vessel, Bald Head.
 39470—Eleven fragments of brass vessels, Bald Head.
 39471—Gouge, Carrying Place.
 39472—Gorget, Carrying Place.
 39473-39474—Axes or adzes, Carrying Place.
 39475—Brass vessel, Smokes Point, Prince Edward Co.
 39476—Brass vessel, Smokes Point, Prince Edward Co.
 39477—Brass vessel, Carrying Place, Prince Edward Co.
 39478—Brass vessel, Indian Island, Bay of Quinte.
 39479—Seven fragments of brass vessels, Bay of Quinte.
 39480-39494—Axes or adzes, Lot 1, Con. 1, Murray Tp.
 39495—Glass and bone beads, Lot 1, Con. 1, Murray Tp.
 39496—Glass beads, Lot 1, Con. 1, Murray Tp.
 39497—Shell gorget, Lot 1, Con. 1, Murray Tp.
 39498-39500—Bones (worked), Bald Head.
 39501-39505—Horn awls, Bald Head.
 39506—Implements made from antler, Bald Head.
 39507-39511—Bone awls, Lot 1, Con. 1, Murray Tp.
 39512—Beads, Lot 1, Con. 1, Murray Tp.
 39513-39515—Fragments of pottery, Lot 1, Con. 1, Murray Tp.
 39516—Bone comb, Bald Head.
 39517-39519—Barbed bone spear-heads, Bald Head.
 39520-39523—Bone pendants, Bald Head.
 39524-39526—Bone awls, Bald Head.
 39527-39530—Awls (antler), Bald Head.
 39531—Clay pipe bowl, Bald Head.
 39532—Iron tomahawk, Bald Head.
 39533—Thirty chert arrow-heads, Bald Head.
 39534—Gorget, Bald Head.
 39535-39552—Brass arrow-heads, Bald Head.
 39553—Brass bangle, Bald Head.
 39554—Piece of sheet copper, Bald Head.
 39555-39556—Arrow-heads (sheet brass), Bald Head.
 39557-39560—Axes or adzes, Bald Head.
 39561—Gouge, Big Island, Bay of Quinte.
 39562—Gorget, Bald Head.
 39563-39572—Axes or adzes, Big Island, Bay of Quinte.
 39573—Axe or adze, Murray Tp.
 39574—Gorget, Big Island, Bay of Quinte.
 39575-39577—Slate arrow-heads, Big Island, Bay of Quinte.
 39578—Part of stone pipe, Big Island, Bay of Quinte.
 39579—Rubbing stone, Big Island, Bay of Quinte.

- 39580—Large chert spear-head, Big Island, Bay of Quinte.
 39581-39583—Arrow or spear-heads, Big Island, Bay of Quinte.
 39584—Twenty-eight chert arrow-heads, Big Island, Bay of Quinte.
 39585-39610—Foot bones (ground flat on one side), Sand Banks, Prince Edward Co.
 39611-39650—Bone awls, Sand Banks, Prince Edward Co.
 39651—String of bone beads, Sand Banks, Prince Edward Co.
 39652-39660—Bone spear-heads (barbed), Sand Banks, Prince Edward Co.
 39661-39666—Awls (antlers), Sand Banks, Prince Edward Co.
 39667—Forty-three chert arrow-heads, etc., Frankford, Northumberland Co.
 39668-39676—Slate arrow or spear-heads, Northumberland Co.
 39677-39682—Chert arrow-heads, Northumberland Co.
 39683—Thirty chert arrow-heads, Lot 60, Con. 1, Ameliasburg Tp.
 39684-39689—Slate arrow or spear-heads, Lot 60, Con. 1, Ameliasburg Tp.
 39690-39696—Chert arrow-heads, Lot 60, Con. 1, Ameliasburg Tp.
 39697-39700—Bayonets, Queenston Heights.
 39701—Iron adze, Queenston Heights.
 39702—Forty-two chert specimens, arrows, etc, Ameliasburg Tp.
 39703—Fifteen fragments of pottery, Ameliasburg Tp.
 39704—Pieces of clay pot, Ameliasburg Tp.
 39705-39708—Clay pipe bowls, Ameliasburg Tp.
 39709—Gorget, Ameliasburg Tp.
 39710-39726—Axes or adzes, Gardenville.
 39727—Tablet (sandstone), Gardenville.
 39728—One hundred and ten small bone awls, Bald Head.
 39729-39732—Bone spear-heads (barbed), Bald Head.
 39733-39739—Bone awls, Bald Head.
 39740-39744—Imperfect implements (antler), Bald Head.
 39745-39754—Bone awls, Lot 21, Con. 3, Hillier Tp.
 39755-39757—Foot bones (ground flat), Lot 21, Con. 3, Hillier Tp.
 39758-39781—Clay pipe stems, Lot 21, Con. 3, Hillier Tp.
 39782-39787—Axes or adzes, Lot 21, Con. 3, Hillier Tp.
 39788-39789—Small stone implements, Lot 21, Con. 3, Hillier Tp.
 39790—Thirty-five chert specimens, Ameliasburg Tp.
 39791-39809—Metal arrow points, Ameliasburg Tp.
 39810—Piece of sheet metal, Ameliasburg Tp.
 39811-39812—Metal bangles, Ameliasburg Tp.
 39813—String of glass beads, Ameliasburg Tp.
 39814—String of small shell wampum, Ameliasburg Tp.
 39815—String of glass beads, Ameliasburg Tp.
 39816—String of shell wampum, Ameliasburg Tp.
 39817—String of shell and glass beads, Ameliasburg Tp.
 39818—String of shell and glass beads, Ameliasburg Tp.
 39819—Small pendant (shell), Ameliasburg Tp.
 39820—Small pendant (shell), Ameliasburg Tp.
 39821—Clay pipe bowl, Ameliasburg Tp.
 39822-39827—Clay pipe stems, Ameliasburg Tp.
 39828-39831—Fragments of pottery, Ameliasburg Tp.
 39832—Stone pipe bowl, Ameliasburg Tp.
 39833-39834—Small stone implement, Ameliasburg Tp.
 39835-39842—Arrow-heads, Ameliasburg Tp.
 39843—Sixty-five chert specimens, arrows, etc., Sand Banks, Prince Edward Co.
 39844—Large flint spear-head, Sand Banks, Prince Edward Co.
 39845-39856—Slate arrow or spear-heads, Sand Banks, Prince Edward Co.
 39857—Clay pipe bowl, Bald Head.
 39858—Silver armlet, Bald Head.
 39859-39880—Fragments of pottery, Big Island.
 39881—Clay pipe bowl, Big Island.
 39882—Clay pipe stem, Big Island.
 39883-39895—Axes or adzes, Big Island.
 39896—Gorget, Lot 19, Con. 1, Hillier Tp.
 39897-39900—Axes or adzes, Carrying Place.
 39901—Iron spear-head, Hillier Tp.
 39902—Small iron axe-shaped implement, Hillier Tp.
 39903-39937—Fragments of pottery, Wellers Bay.
 39938—Axe or adze, Gardenville, Ameliasburg Tp.
 39939—Axe or adze, Lot 112, Con. 2, Ameliasburg Tp.
 39940-39942—Axes or adzes, Lot 112, Con. 2, Ameliasburg Tp.
 39943—Axe or adze, Lot 4, Con. 2, Ameliasburg Tp.
 39944—Axe or adze, Lot 3, Con. 1, Ameliasburg Tp.
 39945—Axe or adze, Lot 107, Con. 3, Ameliasburg Tp.
 39946—Axe or adze, Lot 105, Con. 1, Ameliasburg Tp.

- 39947—Axe or adze, Lot 112, Con. 2, Ameliasburg Tp.
 39948—Axe or adze, Lot 106, Con. 1, Ameliasburg Tp.
 39949—Axe or adze, Carrying Place.
 39950—Sandstone implement, Lot 1, Con. 1, Murray Tp.
 39951—Sandstone implement, Lot 17, Con. B, Murray Tp.
 39952-39959—Axes or adzes, Lot 10, Con. A, Murray Tp.
 39960—Axe or adze, Bald Head.
 39961-39962—Axes or adzes, Sand Banks, Prince Edward Co.
 39963-39966—Axes or adzes, Granite Island.
 39967-39996—Axes or adzes, Hillier Tp.
 39997-40000—Axes or adzes, Carrying Place.
 40001-40011—Axes or adzes, Bald Head.
 40015-40031—Axes or adzes—Smokes Point, Wellers Bay.
 40032-40034—Gouge (metal), Carrying Place.
 40032-40034—Gouges (metal), Carrying Place.
 40037-40050—Axes or adzes, Consecon, Prince Edward Co.
 40051—Ice pick, Consecon, Prince Edward Co.
 40052-40064—Axes or adzes, Wellington.
 40065-40069—Axes or adzes, Lot 9, Con. 1, Murray Tp.
 40070-40077—Axes or adzes, Bald Head.
 40078—Axe or adze, Picton.
 40079—Axe or adze, Hall's Point, Lot 1, Murray Tp.
 40080—Axe or adze, Lot 1, Con. 1, Murray Tp.
 40081-40082—Axes or adzes, Hillier Tp., Murray Tp.
 40083-40090—Axes or adzes, Lot 12, Con. 1, Ameliasburg Tp.
 40091-40100—Axes or adzes, Lot 1, Con. 1, Murray Tp.
 40101-40109—Axes or adzes, Stony Point, Murray Tp.
 40110-40168—Fragments of pottery, Bald Head.
 40169-40191—Axes or adzes, Bay of Quinte.
 40192-40195—Fragments of pottery, Sand Banks, Prince Edward Co.
 40196-40199—Fragments of pottery, Bald Head.
 40200—Grooved axe, Dane Co., Wisconsin, U.S.A.
 40201—Grooved axe, Murray Tp.
 40202—Part of pewter dish, Trenton, Ont.
 40203—Sinker (stone), Carrying Place.
 40204—Long slender stone implement, Lot 1, Con. 1, Ameliasburg Tp.
 40205—Sandstone implement, Lot 1, Con. 1, Ameliasburg Tp.
 40206-40208—Sandstone implements, Bald Head.
 40209—Long flat stone implement, Lot 1, Con. 1, Ameliasburg Tp.
 40210—Axe or adze, Dag Hill, Murray Tp.
 40211—Whip handle (antler).
 40212-40245—Fragments of pottery, Prince Edward Co.
 40216-40266—Axes or adzes, Lot 1, Con. 1, Ameliasburg Tp.
 40267-40275—Axes or adzes, Bald Head.
 40276-40289—Axes or adzes, Lot 7, Con. 1, Murray Tp.
 40290—Axe or adze, Lot 107, Con. 1, Murray Tp.
 40291—Axe or adze, Stony Point, Murray Tp.
 40292-40298—Axes or adzes, Indian Island.
 40299-40304—Axes or adzes, Lot 12, Con. 1, Ameliasburg Tp.
 40305—Axe or adze, Lot 1, Con. 1, Ameliasburg Tp.
 40306—Axe or adze, Lot 4, Con. 1, Ameliasburg Tp.
 40307—Axe or adze, Lot 107, Con. 1, Ameliasburg Tp.
 40308-40334—Axes or adzes, Lot 6, Con. 1, Murray Tp.
 40335-40349—Axes or adzes, Wellington.
 40350—Axe or adze, Northport.
 40351—Axe or adze, Bay of Quinte.
 40352-40354—Axes or adzes, Wellington.
 40355-40364—Axes or adzes, Northport.
 40365—Axe or adze, Lot 1, Con. 1, Murray Tp.
 40366-40367—Axes or adzes, Lot 107, Con. 3, Ameliasburg Tp.
 40368-40369—Axes or adzes, Smokes Point.
 40370-40380—Axes or adzes, Carrying Place.
 40381-40383—Axes or adzes, Athol Tp.
 40384—Axe or adze, Trenton, Ont.
 40385-40388—Axes or adzes, Gardenville.
 40389-40390—Axes or adzes, Lot 85, Con. 2, Ameliasburg Tp.
 40391—Axe or adze, Wellington.
 40392—Axe or adze, Indian Island, Bay of Quinte.
 40393—Axe or adze, Lot 92, Con. 1, Ameliasburg Tp.
 40394—Axe or adze, Lot 1, Con. 1, Murray Tp.
 40395-40396—Axes or adzes, Gardenville.

- 40397-40398—Iron tomahawks, Wellington.
40399—Iron tomahawk, Belleville, Ontario.
40400—Iron tomahawk, Carrying Place.
40401—Iron tomahawk, Murray Tp.
40402—Iron tomahawk, Athol Tp.
40403—Metal meat chopper, Wellington.
40404—Broad axe, North Marysburg.
40405—Stone pipe, Athol Tp.
40406—Stone pipe, Wellington.
40407—Stone pipe, Marysburg Tp.
40408—Stone pipe, Lot 5, Con. 5, Murray Tp.
40409-40410—Clay pipe bowls.
40411-40413—Clay pipe bowls, Hillier Tp.
40414-40415—Clay pipe bowls, Wellington.
40416-40430—Clay pipe stems, Bald Head.
40431—Sandstone implement, West Lake.
40432—Sandstone implement, Wellington.
40433-40435—Axes or adzes, Ameliasburg Tp.
40436—Axe or adze, York Road, Trenton.
40437—Axe or adze, Indian Reserve, Georgian Bay, Simcoe Co.
40438—Axe or adze, Hillier Tp.
40439—Twenty-eight fragments of pottery, West Lake.

40441—Twenty-two fragments of pottery, Athol Tp.
40442—Twenty-eight fragments of pottery, Murray Tp.
40443—Seventeen fragments of pottery, Stony Point, Murray Tp.
40444—Twenty-two fragments of pottery, Kemps, Bay of Quinte.
40445—Eighty-three fragments of pottery, Bald Head.
40446—Forty-six fragments of pottery, Hillier Tp.
40447—Six fragments of pottery, Athol Tp.
40448—Fragments of pottery, Wellington Beach.
40449—Forty fragments of pottery, Lot 10, Con. 1, Murray Tp.
40450—Fifty-two fragments of pottery, Indian Island.
40451—Seventy-one fragments of clay pipes, Indian Island.
40452—Sixty-seven chert specimens, Lot 7, Con. 1, Murray Tp.
40453-40460—Axes or adzes, Lot 7, Con. 1, Murray Tp.
40461-40466—Axes or adzes, Trenton.
40467—Axes or adzes, Hillier Tp.
40468—Slate skinning knife, Hillier Tp.
40469—Eleven fragments of pottery, Trenton.
40470—Twenty-five chert specimens, Trenton.
40471-40472—Slate arrow-heads, Gardenville.
40473-40478—Bone awls, Lot 8, Con. 1, Murray Tp.
40479—Shell gorget, Trenton Mountain.
40480—Part of shell gorget, Trenton Mountain.
40481—Round shell gorget, Trenton Mountain.
40488—Bone gorget, Trenton Mountain.
40489-40492—Brass finger rings, Lot 12, Con. 1, Murray Tp.
40493—Eight brass finger rings, Bald Head.
40494—Twenty-six fragments of brass finger rings, Bald Head.
40495—Nine brass finger rings, Bald Head.
40496—One hundred and forty-one chert specimens, Bloomfield.
40497—Twenty-eight fragments of pottery, Bloomfield.
40498—String of shell wampum, Bloomfield.
40499—String of glass and shell beads, Bloomfield.
40500—String of glass and shell beads, Bloomfield.
40501—Glass and shell beads, Bloomfield.
40502—Steel beads, Wellington.
40503-40508—Slate arrow or spear-heads, Bloomfield.
40509-40510—Bone beads, Bloomfield.
40511-40517—Bone awls, Bloomfield.
40518-40521—Awls (antlers), Bloomfield.
40522—Fragments of skull (human), Bloomfield.
40523-40526—Fragments of sheet brass, Bloomfield.
40527-40531—Old metal knife blades, Bloomfield.
40532—Stone tube, Bloomfield.
40533-40539—Arrow-heads, Bloomfield.
40540-40541—Axes or adzes, Bloomfield.
40542—Ice pick, Frankford.
40543-40544—Axes or adzes, Frankford.
40545-40549—Axes or adzes, Lot 12, Con. 1, Murray Tp.

- 40550-40553—Axes or adzes, Wellington.
40554—Axe or adze, Gardenville.
40555—Axe or adze, Ameliasburg Tp.
40556-40557—Axes or adzes, Trenton, Ont.
40558—Rubbing stone, Indian Island.
40559-40564—Axes or adzes, Bald Head.
40565—Axe or adze, Ameliasburg Tp.
40566—Eight chert specimens, Lot 6, Con. 1, Murray Tp.
40567—Skinning knife (slate), Lot 6, Con. 1, Murray Tp.
40568-40577—Axes or adzes, Lot 6, Con. 1, Murray Tp.
40578—Fragment of pottery, Lot 7, Con. 1, Murray Tp.
40579-40580—Fragments of pottery, Lot 9, Con. 1, Murray Tp.
40581—Clay pipe, Lot 107, Con. 1, Murray Tp.
40582—Stone pipe, Lot 1, Con. 1, Murray Tp.
40583—Gorget, Bald Head.
40584—One hundred and thirty chert specimens, Lot 7, Con. 1, Murray Tp.
40585—Seventy-one chert specimens, Lot 99, Con. 2, Ameliasburg Tp.
40586—Iron tomahawk, Smokes Point, Wellers Bay.
40587-40590—Axes or adzes, Smokes Point, Wellers Bay.
40591—Awl (antler), Smokes Point, Wellers Bay.
40592-40593—Bone combs, Smokes Point, Wellers Bay.
40594—Small shell gorget, Smokes Point, Wellers Bay.
40595-40597—Arrow-heads, Smokes Point, Wellers Bay.
40598-40608—Clay tablets, Michigan State, U.S.A.
40609—Copper knife, Michigan State, U.S.A.
40610-40611—Copper tablets, Michigan State, U.S.A.
40612-40616—Copper spear-heads, Michigan State, U.S.A.
40617-40618—Copper arrow-heads, Michigan State, U.S.A.
40619-40625—Copper discs, Michigan State, U.S.A.
40626-40628—Copper ornaments, Michigan State, U.S.A.
40629-40630—Copper head ornaments, Michigan State, U.S.A.
40631-40633—Copper ornaments, Michigan State, U.S.A.
40634-40635—Large slate implements, Michigan State, U.S.A.
40636-40637—Ceremonial stones, Michigan State, U.S.A.
40638-40649—Sandstone gorgets, Michigan State, U.S.A.
40650—Clay casket with lid, Michigan State, U.S.A.
40651—Clay casket with lid, Michigan State, U.S.A.
40652—Clay casket with lid, Michigan State, U.S.A.
40653—Clay casket with lid, Michigan State, U.S.A.
40654—Lid of clay casket, Michigan State, U.S.A.
40655-40659—Clay pipes, Michigan State, U.S.A.
40660-40668—Clay vessels, Michigan State, U.S.A.
40669—Forty chert specimens, Michigan State, U.S.A.
40670—Slate spear-head, Michigan State, U.S.A.
40671-40680—Clay vessels, Arizona, U.S.A.
40681-40682—Clay vessels (black), Arizona, U.S.A.
40683-40684—Gorget, Hillier Tp.
40685—Stone pipe, North West Territories.

 40748—Indian-made beaded cap, Quebec.
 40749—Beaded leg band, North West Territories.
 40750—Buckskin tobacco bag (quill work), North West Territories.
 40751—Buckskin tobacco bag (beaded), North West Territories.
 40752—Pair beaded moccasins, North West Territories.
 40753—Pair beaded mitts, North West Territories.
 40754—War club (mounted), North West Territories.
 40755—War club (carved wood), North West Territories.
 40756—Bow.
 40757—Quiver and arrows, North West Territories.
 40758—Birch bark bucket, Ontario.
 40759-40760—Stone axes—mounted (modern).
 40761—Spear, Philippine Islands.
 40762—Leather scabbard, Manila.
 40763—Papoose carrier, Quebec.
 40764—Soldier's leather harness for packing goods, S. Africa.
 40765-40767—Skulls, Bald head.
 40768—Skull, Lot 10, Con. 1, Murray Tp.
 40769—Skull, Bald Head.
 40770—Skull, with arrow-head included, Bald Head.
 40771-40780—Skulls, Bald Head.
 40781-40785—Fragments of skulls, Bald Head.
 40786—Skull, Bald Head.
 40787—Broken skull, Bald Head.
 40788-40789—Femur bones, Bald Head.
 40790—Stone hammer, Murray Tp.
 40791-40794—Axes or adzes, Bald Head.
 40795—Ceremonial stone.
 40796-40808—Gorgetts, Lot 19, Con. 1, Hillier Tp.
 40809—Small slate implement, Hillier Tp.
 40810-40813—Slate knives, Lot 19, Con. 1, Hillier Tp.
 40814—Eighty chert specimens, Lot 19, Con. 1, Hillier Tp.
 40815—Large copper implement (with native silver), Buchanan's Farm, Murray Tp.
 40816—Copper chisel, Bald Head.
 40817—Copper chisel, Lot 20, Con. 4, Murray Tp.
 40818—Copper chisel, Carrying Place.
 40819—Copper spear-head, Carrying Place.
 40820-40821—Copper spear-heads, Lot 20, Con. 4, Murray Tp.
 40822—Copper spear-head, Picton, Athol Tp.
 40823—Copper spear-head, Sand Banks, Prince Edward Co.
 40824—Copper spear head, Lot 20, Con. 4, Murray Tp.
 40825—Copper spear-head, Indian Island, Bay of Quinte.
 40826—Copper spear-head, Carrying Place.
 40827—Copper spear-head, Lot 20, Con. 4, Murray Tp.
 40828—Copper knife, Indian Island, Bay of Quinte.
 40829—Copper spear or arrow-head, Hillier Tp.
 40830—Copper spike, Indian Island, Bay of Quinte.
 40831—Copper spike, Lot 20, Con. 4, Murray Tp.
 40832—Copper spike, Sand Banks, Prince Edward Co.
 40833—Copper bracelet, Indian Island, Bay of Quinte.
 40834—Copper bracelet, Sand Banks, Prince Edward Co.
 40835—Copper lug off a vessel, Indian Island, Bay of Quinte.
 40836-40837—Copper lugs off a vessel, Carrying Place.

- 40838-40839—Copper lugs off a vessel, Hillier Tp.
 40840-40841—Copper lugs off a vessel, Murray Tp.
 40842-40844—Copper lugs off a vessel, Picton.
 40845—Brass finger ring, Picton.
 40846-40849—Pieces of sheet copper, Carrying Place.
 40850—Copper knife handle, Carrying Place.
 40851—String of copper beads, Carrying Place.
 40852—String of copper beads (made of sheet copper), Carrying Place.
 40853—Stirrup-shaped copper implement, Carrying Place.
 40854-40855—Copper ferrule, Carrying Place.
 40856-40882—Arrow-heads—sheet copper, Bald Head.
 40883-40892—Arrow-heads (made of sheet copper), Indian Island.
 40893—Six arrow-heads (sheet copper), Murray Tp.
 40894—Nine fragments of sheet copper, Murray Tp.
 40895-40900—Bangles made from sheet copper, Murray Tp.

41098-41099—Arrow-heads, Puslinch.
41100—Arrow-head, Parry Sound.
41101-41102—Arrow-heads, Nassagaweya.
41103—Bear tooth, Nassagaweya.
41104-41165—Arrow-heads, Richmond, Virginia, U.S.A.
41166-41212—Arrow-heads and scrapers (chert, jasper, obsidian), Yellowstone Park, U.S.A.
41213—Drill, Yellowstone Park, U.S.A.
41214-41240—Arrow-heads (chert and obsidian), Yellowstone Park, U.S.A.
41241-41242—Copper rings, Nassagaweya.
41243—Crescent shaped piece of limestone, Yellowstone Park, U.S.A.
41244—Chert drill, East Trail, Puslinch.
41245—Spear-head, Puslinch.
41246-41248—Arrow-heads (quartz), Puslinch.
41249-41250—Arrow-heads (chert), Puslinch.
41251-41252—Arrow-heads (quartz), Puslinch.
41253-41258—Arrow-heads, Puslinch.
41259—Arrow-head, Puslinch.
41260-41262—Arrow-heads, Puslinch.
41263—Arrow-head (quartz), Puslinch.
41264-41267—Arrow-heads, Puslinch.
41268—Arrow or spear-head, East Flamboro.
41269—Drill (chert), Beverly Tp.
41270-41277—Arrow-heads (chert) East Flamboro.
41278—Arrow-head (chert), Puslinch.
41279—Arrow-head (chert), Puslinch.
41280-41283—Arrow-heads, East Flamboro.
41284-41285—Drills, Puslinch.
41286-41312—Arrow-heads (chert), Puslinch.
41313—Wampum beads and buttons, near Vancouver, B.C.
41314—Bone bead, Camping ground, East Trail, Puslinch.
41315—Catlinite bead, Camping ground, East Trail, Puslinch.
41316—Bone awl, Camping ground, East Trail, Puslinch.
41317-41320—Bone beads, Camping ground, East Trail, Puslinch.
41321-41324—Bone awls, Camping ground, East Trail, Puslinch.
41325—Bird amulet, Camping ground, East Trail, Puslinch.
41326-41330—Bone awls, Camping ground, East Trail, Puslinch.
41331—Chert implement, Puslinch.
41332—Water-worn stone (pestle shaped), Yellowstone Park, U.S.A.
41333—Axe or adze, East Trail, Puslinch.
41334—Candle snuffer, East Flamboro.
41335—Fragment of circular stone, Goochland Co., Virginia, U.S.A.
41336—Chinese pipe, Skeena River, B.C.
41337—Well finished cruse (wick lamp), Donegal, Ireland.
41338—Round piece of soapstone (hollowed out), Yellowstone Park, U.S.A.
41339—Pottery fragment, Dumfries Tp.

- 41340—Iron tomahawk, Dumfries Tp.
41341—Iron adze, Parry Sound.
41342—Fragment of stone pillar, Dunfermline Castle, Scotland.
41343—Mortar, Fraser Delta, B.C.
41344—Mortar, Sacramento Valley, California, U.S.A.
41345—Anchor Stone, Fraser Delta, B.C.
41346—Hammer stone, Rokeby, Sask.
41347—Long pestle-shaped stone, Sacramento Valley, California, U.S.A.
41348—Stone anchor, Fraser Delta, B.C.
41349—Stone sinker, Fraser Delta, B.C.
41350—Hammer stone, near Portage la Prairie, Man.
41351-41352—Horn spoons, Iceland.
41353-41360—Horn spoons, Skeena River, B.C.
41361—Chisel (stone), Puslinch township.
41362-41363—Water-washed stone (with hole), Skeena River, B.C.
41364—Halibut fish hook, Port Simpson, B.C.
41365—Salmon fish-hook, Skeena River, B.C.
41366—Chinese hat, Vancouver, B.C.
41367-41368—Bayonets (American war).
41369—Short sword, found near Sterling, Scotland.
41370—Beaded moccasins, Dakota.
PRESENTED BY MRS. HECTOR CLEMES.
41371—Toggle spear point and raw hide lash, James Bay.
41372—Long woven wool sash, James Bay.
41373—Buckskin mitts, James Bay.
41374—Buckskin mitts, James Bay.

UNIVERSITY OF TORONTO

REPORT OF THE

BOARD OF GOVERNORS

FOR THE

YEAR ENDING 30th JUNE

1921

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO

Printed and Published by CLARKSON W. JAMES, Printer to the King's Most Excellent Majesty

1921

PRINTED BY
THE RYERSON PRESS.

BOARD OF GOVERNORS

For the year ending 30th June, 1921

TO HIS HONOUR THE LIEUTENANT-GOVERNOR IN COUNCIL:

The Governors of the University of Toronto have the honour to submit their fifteenth annual report, with which is included the President's report upon the academic work of the University and its Colleges for the Session 1920-21, and the usual departmental reports. There are also appended the customary statements in detail of the receipts and expenditures of the Board for the fiscal year which closed on 30th June, 1921, duly audited in accordance with the provisions of the Statute.

The erection of the new building for Electrical Engineering was practically completed during the year, there having been expended thereon at 30th June \$324,398 out of the grant of \$350,000 voted by the Legislature for the purpose. Certain fittings and equipment remained to be provided from the balance of the appropriation, but the building was ready for occupation by the opening of the current Session, and the formal opening took place early in the term.

During the year, also, the plans and specifications for the new Anatomical building, for the erection of which a grant of \$500,000 has been passed by the Legislature, were considered and revised and tenders let for the work. The construction was begun in the summer and the building is now considerably advanced. It is hoped to have it ready for use in the Session 1922-23.

Plans for the additions to the Ontario College of Education are now under consideration by a Committee of the Board and officials of the Department of Education.

The gross revenue for the year was \$1,082,867. The deduction of interest written to Scholarship and other Trust Funds, \$12,286, and of interest paid for bank accommodation, etc., \$1,535, left a net revenue of \$1,069,046, as against \$1,055,825 in 1919-20.

The expenditure under the appropriations for salaries and maintenance was \$1,937,516. This figure, while exceeding that of the previous year by \$428,205, is less by \$57,422 than the anticipated expenditure shown by the estimates prepared at the beginning of the year, and is an evidence, therefore, of the rigid oversight and economy that has been exercised. The item of salaries amounted to \$227,325 more than in 1919-20, and that of Special Research to some \$13,000 additional. The Central Heat, Light and Power Plant cost \$73,197 more than in the previous year, due to the high cost of fuel and labour, and also to an expenditure of some \$10,000 upon pipe covering, soot blowers and other special alterations within the plant designed to give greater efficiency and economy of operation. In the Faculty of Applied Science \$15,000 had to be spent upon structural changes in the old Engineering building, and in a number of depart-

ments in that Faculty increased expenditures had to be made for alterations, fitting up of additional rooms, etc., e.g., in Metallurgy \$7,216, and Applied Chemistry \$2,750. In Electro-Chemistry the installation of electric furnaces cost \$9,163. In Electrical Engineering, distribution panels in laboratories and equipment for lecture rooms which could not be provided from the capital account for the building cost a further \$8,800. The general cost of examinations was greater by \$5,600. The completion of the Roll of Service represents an increased outlay of upwards of \$5,000. The University's share of the maintenance of the Royal Ontario Museum was greater by almost \$12,500; while the expansion in the work of the department of University Extension and Publicity accounts for an increase of a further \$8,000. Other items of smaller importance make up the total.

The difference between the available revenue \$1,069,046, and the expenditure \$1,937,516, is \$868,470. To this had to be added the debit balance brought forward from the previous year \$9,311, making \$877,781. This has been charged against the special grant of \$880,000 voted by the Legislative Assembly for 1920-21, leaving a balance on hand of \$2,219.

All of which is respectfully submitted.

B. E. WALKER,
Chairman.

Toronto, 30th November, 1921.

PRESIDENT'S REPORT

1921-1922

To the Governors of the University of Toronto:

GENTLEMEN,—I beg to submit the following report on the academic work of the University and University College during the twelve months ended June 30th, 1921.

The total staff of the University and University College numbered 558, of whom 68 were professors, 48 associate-professors, 41 assistant-professors, 76 lecturers and associates (in medicine) and instructors in the College of Education, 325 demonstrators, fellows and instructors with sessional appointments. They were distributed as follows:—

	Professors.	Associate Professors	Assistant Professors	Associates	e	Other Sessional Appointments
University (Faculty of Arts)	26*	14	17	21	75
University College	13	4	9	6	6
Faculty of Medicine	15	17	4	11	1	156
Faculty of Applied Science	10	9	4	13	43
Faculty of Household Science	2	2	5
Faculty of Forestry	1	2
Faculty of Music	4

	Director.	Director Field Work		
Social Service Courses	1	1	13
Public Health Nursing	1	1	24

			Lecturers and Chief Instructors	Assistant Instructors	
Ontario College of Education	3	7	4	14

In Victoria College there were:

Professors	14
Associate Professors	4
Lecturers	6
Special Instructor	1

In Trinity College there were:

Professors	9
Lecturers	8

In St. Michael's College there were:

Professors	9
Lecturers	17

Dr. Irving H. Cameron having reached the age limit for retirement withdrew from the active duties of the professorship of Surgery which he had performed for thirty-three years. By his skill and knowledge as a surgeon, his broad and deep cultivation of mind, his exemplification of the best qualities of his profession and his wide acquaintance with its leaders in both hemispheres he shed great lustre on the chair which he occupied. The University is deeply grateful for the service rendered to her by one of her most loyal sons.

At the close of the session William George Smith, B.A., Associate-Professor of Psychology resigned his position in order to become head of the department of Philosophy in Wesley College, Winnipeg.

The following new appointments and promotions were made during the year:—

In the Faculty of Arts.—Promotions: Thomas Hirst Black, M.A., B.Sc., LL.B., (Glasgow), from a lectureship to a professorship in Roman Law and Jurisprudence; Samuel Beatty, Ph.D., from an assistant-professorship to an associate-professorship in Mathematics; Hardolph Wasteney, Ph.D., (Columbia), from an assistant-professorship to an associate-professorship in Biochemistry; Edward Alexander Bott, B.A., from a lectureship to an assistant-professorship in Psychology; David Duff, M.A., B.D., (Edin.), from a lectureship to an assistant-professorship in Latin.

Appointments—Ralph Flenley, M.A., (Liverpool), B.Litt. (Oxon), associate-professor of History; Robert Strachan Knox, B.A. (Oxon), M.A. (Aberdeen), associate-professor of English; Emilio Goggio, M.A., Ph.D. (Harvard), assistant professor of Italian and Spanish; Thure Hedman, Ph.B. (Chicago), assistant-professor of German; James Montrose Duncan Olmsied, M.A. (Oxon), Ph.D. (Harvard), assistant-professor of Physiology; John Lighton Synge, B.A. (Trin. Coll. Dublin), assistant-professor of Mathematics; Miss Aline Chalufour, B. ès L. (Paris), lecturer in French; William Andrew Cook, M.A., lecturer in Psychology; John Richardson Dymond, M.A., lecturer in Systematic Vertebrate Zoology; Wellesley Dorland Evans, B.A., lecturer in French; Harold William Alexander Foster, LL.B., lecturer in Commercial and International Law; Harold Adams Innes, M.A., (Chicago), lecturer in Political Economy; Hubert Richmond Kemp, M.A., lecturer in Economics; Norris Edward Sheppard, M.A., lecturer in Mechanics and Mathematics; Norman Burke Taylor, M.B., lecturer in Physiology, and Miss Jessie Gertrude Wright, M.A., lecturer in Botany.

In the Faculty of Medicine.—Promotions: Robert Davies Defries, M.D., D.P.H., from a lectureship to an assistant-professorship in Hygiene; Hugh Bethune Maitland, M.B., from a lectureship to an assistant-professorship in Pathology and Bacteriology.

Appointments—Alexander Primrose, C.B., M.B., C.M. (Edin.), Dean; John James Rickard Macleod, M.B., C.B. (Aberdeen), D.P.H. (Cambridge), Associate-Dean; Victor John Harding, D.Sc. (Manchester), professor of Chemical pathology; Gideon Silverthorne, M.B., professor of Medical Jurisprudence; Noble Carman Sharpe, B.A., M.B., assistant professor of Pharmacy and Pharmacology; George Maitland Biggs, M.B., associate in Oto-Laryngology; Harvey Clare, M.D., associate in Psychiatry; Gordon Earle Richards, M.B., associate in Radiology; and Donald Thomas Fraser, B.A., M.B., lecturer in Hygiene.

In the Faculty of Applied Science,—Promotions: Peter Gillespie, M.Sc., C.E., from an associate-professorship to a professorship in Applied Mechanics; Frederick Charles Dyer, B.A.Sc., from a lectureship to an assistant-professorship in Mining Engineering.

Appointments—Adrian Berrington, associate-professor of Architecture; John Hamilton Parkin, B.A.Sc., M.E., assistant-professor of Hydraulics; C. S. Adams, B.Sc., M.A., lecturer in Applied Chemistry; Wesley Austin, M.Sc., lecturer in Metallurgical Engineering; and James Edwin Toomer, B.Sc., lecturer in Metallurgical Engineering:

In the Faculty of Forestry.—Promotions: Clifton Durant Howe, M.A. (Vermont), Ph.D. (Chicago), from associate-professorship and acting deanship to a professorship and to be Dean of the Faculty; Willis Norman Millar, B.Sc. (Pennsylvania), M.F. (Yale), from an assistant-professorship to an associate-professorship; James Herbert White, M.A., B.Sc.F., Ph.D., from an assistant-professorship to an associate-professorship.

In the Department of Social Service,—Appointments: James Alfred Dale, M.A., (Oxon), Director of Department and professor of Social Science; Miss Agnes Christine McGregor, Director of Field Work.

In the Department of Public Health Nursing.—Appointments: Miss E. Kathleen Russell, B.A., Director of Course.

In the Department of Public Health Nursing.—Appointments: Miss E. Dunlop, B.A. (Queen's), Director of Extension Work and Publicity.

In the Department of Military Studies.—Appointments: Professor William Robert Lang, D.Sc. (Glasgow), Director of Military Studies.

In the Ontario College of Education,—Promotions: Peter Sandiford, M.Sc., Ph. D., from an associate-professorship to a professorship in Educational Psychology; Miss Laura Lavinia Ockley, B. A., from a lectureship to an assistant-professorship in Household Science.

Appointments,—Walter Ernest Macpherson, B.A., LL.B., assistant-professor; Frank Halbus, B.A., lecturer, and Allen Nelson Scarrow, lecturer.

In Special Research,—Appointments; John Bright Ferguson, B.A., associate-professor of Chemistry; Harold Boys Sifton, M.A., assistant-professor of Botany.

The total number of students registered in the University in 1920-1921 was 5,060, or apart from those registered in the Summer Session and Occasionals in Social Service, 4,710, distributed as follows:—

	Men.	Women.	Total.
Faculty of Arts:—			
University of Toronto	128	61	189
University College	630	540	1,170
Victoria College	319	191	510
Trinity College	88	41	129
St. Michael's College	121	85	205
Graduate Courses	113	50	163
Faculty of Medicine	1,039	88	1,127
Faculty of Applied Science	805	1	806
Ontario College of Education	150	76	226
Faculty of Forestry	55	55
Faculty of Music	12	6	18
Department of Social Service	18	348	366
Department of Public Health Nursing		126	126
Registered twice	20	11	31
	<u>3,458</u>	<u>1,602</u>	<u>5,060</u>

The figures may be further analyzed as follows:

B.S.A.	74	
B.Sc.F.	6	
Phm.B.	94	
B.V.Sc.	19	
		1,006

Such a complete report of the present condition and needs of the University was presented last December to the University Commission appointed by the Government, that little remains except to refer to the actual work of the academic year and to emphasise a few matters of especial urgency.

The figures of attendance show that in all the faculties and departments except the College of Education there have been more students than in any other year in the history of the University. Arts has reached its pre-war mark; Medicine is much higher than it has ever been; Applied Science, in spite of the

-exaction of a more difficult standard of entrance, was as large as in the previous year. Owing to pressure on our space the students of the Royal College of Dental Surgeons could not be given instruction in Anatomy, and to that extent the number of occasionals was diminished.

The problem of entrance still faces us. The first year of University College was so large that the accommodation was not only quite inadequate, but is such that there are many rooms in which students should not be required to take instruction. The situation in Economics was even worse, for one old dwelling-house was the headquarters of a department that has to provide instruction for 763 pass and 240 honour students. But perhaps worst of all was the condition of the students in Botany. Not only are the laboratories of this rapidly growing department quite inadequate for the present, but it was necessary to break up the teaching museum in order to get space for the routine instruction. Graduate work is curtailed, and necessary additions to the staff cannot be secured to take care even of present needs as there is no place in which to have the teaching done. It will be difficult to attract good men to the staff until better quarters can be offered.

I cannot emphasise too strongly the fact that the delay in carrying out the building programme set forth by the Governors last year to the Commission is seriously crippling the efficiency of the University. Every indication goes to show that even with the rise of standards the numbers in Arts will not be reduced in such a way as to make the demands for buildings less urgent. The best work cannot be done in the kind of space we have at our disposal.

The Faculty of Arts is maintaining its position among the other Faculties, and shows signs of steady and permanent increase, which is partly due to the large number of women who are entering the Colleges. This fact increases the necessity of securing a Dean of Women who will have as her main duty the supervision of the welfare of the women students in University College. For the last five years Miss Margaret Wrong acted as Resident Head of the University College Union, and by her earnest work, her indefatigable interest in individual students and her creation of high standards introduced a new life among the women. I wish here to express my high appreciation of what she has done. But the work so well begun must be carried further, and though I am very grateful to Miss Waddington for having consented to act as Resident Head of the Union in addition to her duties in the department of English, the experience of this opening academic year only emphasises the necessity of having some graduate devote her whole time to the deanship.

Collegiate life will never be what it should be in University College until residences for men and women with a Union for the latter have been provided in addition to proper class-room accommodation. Our students, drawn as they are from every section of Ontario as well as other parts of the Dominion, and from all classes in society, are material of first-rate quality, but without suitable buildings to live and work in they are not getting what they should get from their college life; they are not educating one another as they might; they do not enjoy those rich gifts which are so uniquely afforded in the English and the old American College, a historical institution which both branches of the English-speaking world have preserved as distinctive in their educational system. It

remains for us also in Canada to preserve as a centre of liberal education the college bearing our own individual mark and affording opportunities for intercourse and friendship through the constant commingling of students.

That the intellectual standards of the University Colleges are high is shown by the successes of our Toronto Arts graduates who have continued their studies in Britain and the United States. Recently there have been several brilliant successes at Oxford, and a score of our graduates are now taking courses in British universities to which their entrance is made easy on account of the work done by their predecessors.

Our graduate work in Arts has been quietly growing. Last year there were 95 doing M.A. work, 37 preparing for the Ph.D. and other advanced degrees (including 3 for the M.D.), 31 in general graduate work, 163 in all. A good deal of attention was directed in the early spring to changes which it was hoped would improve the administration of this graduate work, and these proposals will soon be presented to the Senate for its consideration. Here again I must emphasise the need of more fellowships for graduate work. Present conditions have made it difficult for individuals who were able formerly to provide fellowships to continue to do so. But their provision is a necessity for the welfare of the country. In this respect we are far behind Britain. There the deserving but poor lad is given a chance in school, and if he has ability he can by means of scholarships win his way through Oxford or Cambridge. Britain offers an example of true democracy in the way of educating those who are to become her leaders, her experts in science and her scholars, and this example we shall do well to follow. The more exacting the standards become, the more intense their demand upon the continuous mental energy of those who are to succeed, and the longer the courses, the greater is the necessity for the establishment of scholarships to make the long and arduous journey feasible for many of those who are best qualified to undertake it.

In Medicine the new six years' course is working out satisfactorily, but in the later years already there is such congestion that sufficient clinical material will not be available in the hospitals of the city to afford satisfactory instruction to the individual student. Therefore the numbers of entrants are now being limited, and to place this limitation on a better basis a higher standard of entrance is to be required next year—pass in at least three subjects of honour matriculation.

For the general work of the Faculties of Medicine and Applied Science I refer to the reports of the Deans. In Medicine the most important event was the grant by the Rockefeller Foundation of the interest of one million dollars for the development of the Faculty. Thereby the reorganization of the surgical department somewhat on the lines of Medicine was made possible, under the direction of Dr. Clarence Starr as professor, who began his work on July 1st, 1921. In Applied Science the occupation of the new building for Electricity and Strength of Materials has been a great relief from an overcrowded condition, and has led us to expect confidently a rapid development of these departments, and indeed an improvement in the teaching of the whole Faculty. This University situated as it is should become one of the best centres in the world for advanced work in connection with Hydro-Electric power.

Forestry has been rapidly recovering its pre-war numbers, and the Dean gives interesting information as to the destination of and demands for its graduates. But inadequately as this faculty was housed before the war, it is more so

now, and along with botany, has the worst accommodation of any scientific department in the University.

I wish to call attention to the report of Dean Vogt of the Faculty of Music, and especially to what he says about the transfer of the Toronto Conservatory of Music to the control of the Governors of the University involving as it does also a change in the conduct of our Local Examinations in Music. Henceforth the primary work in music will be done at the Conservatory and the degree work at the University. There will also be only one examination for the Local Examinations which will be conducted by the Conservatory of Music.

Research has been fully reported by those who are in charge of it. Its volume is large, and excellent results, some of which may soon have far-reaching consequences, are being obtained. Through the special grants made by the Governors for research the spirit of investigation has been greatly strengthened, and younger men are to be found in most departments, who, either on their own account or under the direction of others who have already much to their credit, recognize that scientific research not only heightens their own interest but is becoming an essential qualification in a member of the staff of a modern university.

Though what was formerly the Faculty of Education is now the Ontario College of Education the relationship of this department to the Board of Governors is happily unchanged, and I have pleasure in presenting as usual the report of Dean Pakenham. As a result of the new policy the numbers were greatly reduced, those in training for first-class certificates having been assigned to the Normal Schools. All the students in the College of Education in the regular course were graduates in Arts. By reason of the smaller attendance of students and their comparatively similar grades of academic preparation much closer attention has been given to the individual by the members of the staff, and graduate work has now been made possible to a greater extent than formerly.

Mr. Dunlop, who was placed in charge of the Departments of Extension and Publicity, presents a full and very satisfactory report showing what a field of usefulness is opening up to the University in various directions beyond its borders. The demand for lectures may prove greater than our capacity to meet it. Various classes of the community are seeking help from the University, and the experiments in providing short courses for farmers in the winter and for journalists in the summer have been so successful that we can safely forecast large expansion in these and similar directions. The Summer Session and Teachers' Courses also have been rapidly growing in popularity.

For the first time Professor Dale has presented a report as Director of Social Service. The variety of the work he outlines and the improvement in its quality year by year has amply justified the University in establishing this department.

At the request of the Red Cross Society the University undertook to establish a course for Graduate Nurses. Miss E. K. Russell was appointed director, a thorough curriculum with instruction was provided, and over fifty full-time nurses were in attendance who have undertaken to serve the more outlying parts of the country for a certain number of years.

The social and athletic life of the men students has been well maintained through Hart House, the potentiality of which is being more completely realized each year. Also their general health has been well maintained. Both in the domestic and inter-university games the Toronto teams have had a remarkably successful year, but the students are to be especially commended for the spirit they have shown which cannot fail to have a good influence upon sport throughout the country. This University is particularly fortunate in possessing a body of graduates who are so deeply interested in athletic activities that they devote much time and thought in helping to maintain by their advice, along with the undergraduates, the highest and healthiest standard of sport throughout the university.

For the coming year Dr. Porter is to have complete supervision of the health of the men students, and is associated with the Department of Hygiene in the expectation that his results may be of much value in providing data with regard to the general health of the communities from which the students are drawn.

It is most unfortunate that the women students of the University are left without practically any means of promoting common intercollegiate social and athletic activities. They need this life quite as much as the men do; their health requires more careful attention; but we have no suitable building, and therefore cannot make athletics and attendant health supervision compulsory. The appointment of Dr. Edith Gordon on July 1st, 1921, as Medical Adviser for women is a step in the right direction, but without giving her better appliances we cannot expect the best results.

I cannot overlook the valuable co-operation of the Alumni Association during the year in making known the needs of the University to a very wide constituency. Many of our graduates devoted valuable time and energy when it was greatly needed, and without singling out any one above another it may be said that such a large number of graduates have never before been so actively devoted to the welfare of their Alma Mater.

Two special Convocations were held during the year, the first on August 10th, in connection with the visit of the Imperial Press Conference when degrees were conferred upon Robert Donald, Esq., Geoffrey E. Fairfax, Esq., Sir Robert Bruce and the Rt. Hon. Sir Gilbert Parker, Bart., the second on November 5th, in Hart House when an honorary degree was conferred upon Mr. Chester Daniel Massey.

Ten Organ Recitals were given by the University Organist, Mr. F. A. Mouré, covering the months of November to March inclusive. It is a matter of gratification that the attendance at these recitals has now grown to an average of 800 to 1000, an evidence of how much they are appreciated.

The following lectures and extra courses were given:—

Mr. Robert Mond, M.A., F.R.S. of London, England, lectured on "The Mortuary Chapels of the Theban Nobles"; Dr. C. Weizmann, Professor of Biochemistry in the University of Manchester on "The Proposed Jewish University at Jerusalem"; Three lectures were given by Dr. Edgar T. Wherry, of the Bureau of Chemistry, Washington, D.C., on "Optical Crystallography Applied to Chemical Problems"; "Crystal Habit" and "Soil Acidity and Plant Distribution"; a short course on "Christian Art" by Dr. Joseph Pijoan, showing

the development of the different schools of art and architecture throughout the Middle Ages in Europe; the Saturday Afternoon Course consisted of lectures by the Rev. F. J. Foakes Jackson, D.D., on "Margaret Catchpole, A study in East Anglian Life and in Literary Criticism"; Professor W. D. Woodhead, M.A., on "The Case for Greek"; Professor Marcel Moraud, L. ès L., on "Anatole France as an Exponent of Modern French"; Professor Andrew Hunter, M.B. Ch.B., on "Digestion"; Professor C. T. Currelly, M.A., on "Recent Developments in our Knowledge of Chinese Art"; Professor M. A. Buchanan, M.A., Ph.D., on "Lope de Vega and the Spanish Drama"; Professor J. G. Fitzgerald, M.B., on "The Practice of Preventive Medicine"; Professor Pelham Edgar, B.A., Ph.D., on "Novels and Poems of Thomas Hardy"; and the Rev. Abbé Dimnet, on "Coming Men in French Literature."

We thank Sir Bertram Windle, F.R.S., for again providing a most instructive course of twelve lectures on "The Roman Occupation of Britain," which were largely attended.

One of the noteworthy events of the year was the Conference conducted in the Physics Department on "Recent Problems in Physics." Physicists from nearly every University in the Dominion attended this Conference, being drawn by the courses of lectures given by Dr. Silberstein and by Dr. Langmuir on "Relativity." Lectures were also delivered by our own and other Canadian physicists.

The grant from the Rockefeller Foundation of the interest of one million dollars for the development of Medicine has already been referred to. These additional benefactions have been received during the year: J. Harrington Walker Bequest for Residences \$15,000, Khaki University Memorial Scholarships \$12,000, from Canadian Red Cross Society for Public Health Nursing \$4,500, from Sir John M. Gibson for Gibson Pass Matriculation Scholarships \$4,000, from Canadian Oral Prophylactic Association for Dental Research, \$3,000, the William Hardie Scholarship (Ottawa) \$1,000, from Professor John Squair for Squair French Library Fund \$1,000, Pathological Special Investigation Fund from Sir Edmund Osler \$1,000, and an Anonymous Donor \$500; Graduate Fellowships, one from Colonel R. W. Leonard \$500, two from Sir Edmund Osler \$1,000, the R. A. Reeve Prize \$100, R. A. Reeve Bequest \$800, John Hughes Horton Bequest \$650, and from the Marion Dickenson Estate on account of the Marion Dickenson Scholarship in Household Science \$200.

Also during the year the Committee of the Alumni Association have made loans amounting to \$46,399 to 214 returned soldier-students. Already these loans are being repaid and the capital will then be used for providing scholarships for the children or relatives of soldiers.

Again I cannot but refer to the effect in retarding the development of the University which has been produced by our uncertainty as to what financial support can be relied upon. The staff are anxious as to their own future, it is difficult to make offers to men who are called to fill vacancies, and the youth of the country in attendance are not getting all that with some reasonable and reliable annual increase we should offer them. Nor can the University reach out through its extension to meet the opportunities which have been so splendidly manifested by Mr. Dunlop even in the first year of his work. His report shows what lies to our own hand to do if only we have the financial means. The people

young and old want education. Only in a widely cultivated and diversified society such as higher education creates will even those economic interests be constantly called into being which both make and satisfy a productive population. Mere material development will soon exhaust itself by producing a narrow people with few interests, whereas a broadly and highly educated community will become not merely increasingly efficient, but will afford occupation for skilled workers both urban and rural, and will demand a more varied production to meet the growing needs of an enriched country.

All of which is respectfully submitted.

ROBERT A. FALCONER,
President.

November 5th, 1921.

(1) REPORT OF THE PRINCIPAL OF UNIVERSITY COLLEGE.

(PROFESSOR M. HUTTON).

The Session of 1920-1921 has witnessed a certain long over-due awakening of the student body of University College.

My last report was concerned with the crowding out of the College from its own building and the encroachments of the departments of administration.

The students have caught another aspect of these encroachments: they have felt that the College in losing its local centre and its grip on the mis-called "Main Building"—a misnomer very significant of the extent to which the encroachment has gone—was losing its separate identity, and any *esprit de corps* which had managed to survive: when lectures were being delivered in the kitchen, when the classical staff could only be exhumed from sculleries, when the large lectures

in English and Latin could only be found in Medical Buildings or Dining Halls, it seemed unreal and a mockery to give the name of "University College" to another building which saw none of these lectures but was engrossed with the paying of fees and enquiries about the curriculum: and if there was no University College what college spirit was possible?

The general unrest in this and larger forms has had two results: the appointment by the Government of a Committee to report on the needs of the University and College, and the appointment also by the students of a Committee to report on the best means of quickening the corporate spirit of the students of University College.

The students' Committee was started by the student society: the old Literary and Scientific Society which has a long and not inglorious history of some sixty-seven years; and was the original on which the Medical Society and the Engineering Society were based.

It throws a curious side light on the War and on the degree to which the War altered everything, that the Literary and Scientific Society should have lost its hold among a body so conservative as University students: but so it was: the men went to the front in the War: the handful that remained could not maintain the Society and it lapsed: and when the War ceased and the opportunity came for its revival, it seemed too late.

For the lapse had revealed the weak spot in the organization of the society: it was, at least nominally, a debating society: it did not represent the one interest that is strong in all student assemblies and paramount in some, the athletic element.

But the athletes who had served the country nobly in war returned all the stronger for athletics when peace came. They have illustrated it by winning already two Canadian Championships this year in Rugby Football and Hockey. They illustrated it also by asking for better representation in the Student Society of University College than they had ever received in the Literary and Scientific Society. Accordingly the name has been changed to the Literary and Athletic Society and a compulsory fee asked for, which will be spent (on the system of responsible government), by the Executive of the Society, elected by the whole body of male students and responsible to the same, and which also, by providing the money required for athletics will give college spirit and athletic capacity a chance to show itself for the first time freely and without great obstacles in the College; the debating side of the society meanwhile will continue and continue to justify the first part of the society's name.

To turn from the students to the official Government of the University, the Commission appointed to enquire was sufficiently impressed by the kitchens and sculleries where it found students and professors at work to recommend the completion of University College by a north wing, and the building of an Administration Building to set free the south, east and west wings from administrative uses.

This report has not yet been accepted by the Government at the time of writing, but if it be carried out in essentials the same session will have witnessed urgent reforms in the conduct of University College initiated and successfully prosecuted both by the students and by the Province.

I append the figures showing the number of students, the largest yet recorded:

	Men.	Women.	Total
First Year	264	191	455
Second Year	166	130	296
Third Year	103	91	194
Fourth Year	69	97	166
Occasionals	30	30	60
	632	539	1,171

(2) REPORT OF THE DEAN OF THE FACULTY OF MEDICINE.

(PROFESSOR A. PRIMROSE).

Two factors contribute to create an abnormal situation in the conduct of the Course in Medicine at the present time. In the first place the number of students in attendance is far in excess of that which should obtain or has hitherto existed. This is mainly due to the fact that provision had to be made for returned soldiers who had qualified for the Course in Medicine, or who had already entered upon their course before going to the War. In the second place we are passing through a transition period from the five year course to the six year course. This factor causes increased difficulty because of the circumstance that at the beginning of the session 1919-20, when the six year course was introduced, certain of the returned soldiers were eligible to enter the five year course and were so registered, while others, beginning their Medical Studies at the same date, enrolled in the six year course. The result is that the second year of the session 1920-21, contained 212 students of the five year course and 148 students of the six year course. This doubling up of that particular group of students must continue through the final years until the session 1923-24 has been passed.

The first factor mentioned above is not wholly solved by the disposal of the returned soldiers. The tendency is for the entering class in Medicine to grow to proportions beyond that consistent with efficient provision for their instruction. This is true, in particular, concerning the final years of the course. The Council of the Faculty of Medicine have reported very fully to the Senate and the Board of Governors on this matter and have shown conclusively that it is impossible to provide adequate clinical facilities for the instruction of classes beyond a certain size. The University authorities have therefore determined to limit the size of the entering class in the future. The limitation will come into effect next session.

It would therefore appear that we cannot reach ideal conditions as to the size of classes in all years until the session 1926-27 has been passed. In the meantime every effort is being made to make the teaching of these large classes as efficient as circumstances will permit.

A considerable amount of progress has been made during the year in recasting the Rules and Regulations of the Faculty concerning the Methods of Registration, Attendance and the Conduct of the Examinations of Students.

In the Preliminary Science Departments, the only change in the personnel of the permanent staff has been that J. M. D. Olmsted replaced A. C. Redfield as assistant-professor in Physiology. Dr. Olmsted was a Rhodes' Scholar in Oxford where he took the Degree of Master of Arts. He is also a Doctor of Philosophy of Harvard University. The Temporary Appointments, such as

those of Fellows, have not been sufficiently numerous to permit adequate oversight of the classes, but it is expected that this will be rectified during the session 1921-22.

In the Final Departments several changes have taken place. Professor I. H. Cameron has retired from the Chair of Surgery and Clinical Surgery which he has occupied for twenty-three years. For ten years previous to that date he had been professor of Surgery and Surgical Pathology. He therefore held a senior position in the Department of Surgery continuously since the Re-organization of the Faculty in 1887. In 1897 he succeeded the late Professor W. T. Aikins as Head of the Department of Surgery. Throughout this long period of thirty-three years Professor Cameron has served his Alma Mater with great distinction both in the Faculty of Medicine and in the Senate of the University. In recognition of his scholarly attainments and of his service, the University of Edinburgh conferred upon him the Honorary Degree of LL.D. His distinguished career was also recognized abroad when he received, *honoris causa*, the Fellowships of the Royal College of Surgeons of England, of the Royal College of Surgeons of Edinburgh and of the Royal College of Surgeons of Ireland. More recently the honorary Fellowship of the American College of Surgeons has been conferred upon him. His retirement from the active teaching staff is a matter of sincere regret to his colleagues. He has been created an Emeritus Professor. He remains a member of the Senate and, it is hoped, his valued service will long be retained in that capacity for the University.

In the Department of Ophthalmology and Otology there has been the retirement of Dr. G. H. Burnham. He was appointed associate-professor in 1896 and became full professor in 1903. He now becomes Emeritus Professor. In the Department of Medical Jurisprudence Dr. N. A. Powell has retired from the Chair. Dr. Powell was appointed in 1903 in succession to the late Dr. Bertram Spencer. Both Dr. Powell and Dr. Burnham have rendered most valuable service to the University over a long period of years. Each, on his retirement, has been created an Emeritus Professor.

The Chair of Medical Jurisprudence has been filled by the appointment of Dr. Gideon Silverthorn. For some years Dr. Silverthorn has been a member of the teaching Staff in Surgery. He is a graduate of the University of Toronto, and is an acknowledged authority in Medico-legal matters. His wide experience in such matters will be of great value in the discharge of his duties in connection with the Chair.

The Chair of Pathological Chemistry, vacated when Professor Andrew Hunter was transferred to the Chair of Biochemistry, has been filled by the appointment of Dr. Victor John Harding. He is a Doctor of Science of Victoria University, Manchester, England, and comes to us from McGill University where he was a member of the teaching Staff in Chemistry.

Owing to the retirement of Professor Cameron, Professor Primrose was appointed interim head of the Department of Surgery until such time as a permanent appointment should be made.

Dr. Cyril Gray Imrie formerly Lecturer in Pathological Chemistry has been transferred from this University to the Department of Physiology in the University of Sheffield, England, where he assumes duty under Professor Leathes the former Professor of Pathological Chemistry in the University of Toronto.

Dr. Norman Macdonnell Keith, a member of the full time Staff of the

Department of Medicine of this University has been transferred to the Medical Department of the Mayo Foundation, Rochester, Minnesota, where he is in charge of the Cardio-Renal Clinic.

In the Department of Anatomy it has been found extremely difficult to conduct the work in Practical Anatomy because of the inadequacy of space and the difficulty in securing a sufficient amount of material in the Dissecting Room for the large classes. It is expected that these difficulties will be overcome in the near future by the erection of a new anatomical building, by the reduction in the number of students in attendance and by the enlargement of the Staff.

The other laboratory departments have been grossly over-crowded during the session. It has been necessary to divide the classes into groups and to repeat much of the instruction in order that the work should be covered. This has entailed great hardship on many members of the teaching Staff, particularly because of the fact that it robs them of time which should be available for Research. When the number of students has been reduced it will be possible, with the present Staff, to allow each member a reasonable amount of uninterrupted time for this essential part of his work.

The new (six years) course has been in operation for two years. The experience gained during these two years has shown that the combination of a certain amount of Arts work with the regular Medical curriculum is a success. During the first year of the course each student must select one Arts subject, and the following was the enrollment in each option so chosen—College English 53, Mathematics 13, French 77, German 8. During the second year, when two options were required, one of which must be an Arts subject, the numbers in each were—Economics 58, Psychology 40, History 8, Mathematics 13, College English 8, Quantitative Chemistry 50, Biology 56, Physics 17, Philosophy 22.

During the session Post-Graduate Instruction has been organized and undertaken in a more effective manner than has hitherto existed. This has been accomplished partly by offering short review clinical courses during vacation periods of the session and partly by sending lecturers to different parts of the Province. The clinical courses given by different members of the regular teaching Staff during vacation have been well attended and highly appreciated. One such course was given at Christmas vacation and another during the latter part of the month of May. A schedule advertising a series of lectures has been issued to our Medical graduates throughout the Province. This has been done in the shape of a "Bulletin" which has been circulated from time to time and which contains, in addition to the schedule of lectures, a short series of articles on practical subjects indicating the most recent methods of diagnosis and treatment of disease. The courses of lectures have been taken advantage of by numerous groups of medical men and medical Societies throughout the Province which have applied to the medical faculty for the courses advertised and to which lecturers have been sent.

In spite of the severe handicap to the conduct of Research already alluded to, a considerable amount of Research work has been accomplished. A full account of this will be included in the special memorandum on Research which accompanies this Report.

The annual donation of \$50,000.00 to this medical school by the Rockefeller Foundation is now available and it is expected that it will be used largely to develop the Department of Surgery and other clinical subjects along lines similar to

those which have proved so successful and have been made possible, in the Department of Medicine by the endowment of the Chair by Sir John and Lady Eaton. The Rockefeller Gift will also assist in the development of Departments other than Clinical. There is every reason to believe that if the proposed plans are carried into effect the Medical Department of this University will stand in the very front rank among Medical Schools of this Continent.

(3) REPORT OF THE DEAN OF THE FACULTY OF APPLIED SCIENCE AND ENGINEERING (C.H. MITCHELL, ESQ., LL.D.)

The Session now concluding, the second since the termination of the war, has been not only most satisfactory but marked in this Faculty by several features which are of interest.

The incoming first year, much smaller than that preceding, has indicated the effect of the increased entrance requirements which now, in the light of the annual examinations just concluded, seem to be entirely justified. The completion of the new building and its occupation by the Departments of Electrical Engineering and Applied Mechanics not only places these portions of the Faculty in an exceedingly favourable position but has enabled a certain readjustment of space in the old Engineering Building which will be very advantageous to those Departments housed there. The inauguration of instruction at the summer survey camp at Gull Lake in August last is a progressive step making for increased efficiency and economy in time and space during the regular academic Sessions.

By a curious coincidence the total number in attendance in this Faculty this Session was practically the same as last year, 807 divided amongst seven departments, the largest being in Electrical Engineering and the others being Mechanical, Civil, Chemical Mining, Architectural and Metallurgical, decreasing in the order named. The interesting feature of these figures is the clearly indicated swing towards the specially industrial branches of the Engineering profession which indeed is a reflection of the situation throughout Canada at the present time. The following table shows the distribution of students in these various departments by years:—

Year 1920-1921.

	First Year	Second Year	Third Year	Fourth Year	Total
Civil Engineering	29	58	30	37	154
Mining Engineering	13	25	16	12	66
Mechanical Engineering	44	56	33	26	159
Architecture	10	11	3	9	33
Analytical Chemistry	15	15
Chemical Engineering	32	66	38	10	146
Electrical Engineering	60	93	40	23	216
Metallurgical Engineering	3	9	3	3	*18
	191	318	163	135	807

*In addition to these in the regular Metallurgical Engineering there are 26 in Mining and 40 in Chemical Engineering of third and fourth years taking Metallurgy.

There is still a large proportion of soldiers in each year much decreased of course in the first year. It is gratifying to observe that they have done exceedingly well in the annual examinations just concluded. Of the 133 who passed the fourth year examinations 77 were soldiers and out of the 50 who obtained

honours 31 were soldiers. Of the 149 who passed the third year 61 were soldiers and of the 48 who obtained honours 14 were soldiers. Of the 283 who passed the second year 114 were soldiers, and of the 72 who obtained honours 30 were soldiers. Of the 164 who passed the first year 43 were soldiers. Those students who have had their education dislocated by the war may now be said to have recovered their places and it is gratifying to realize that they are now practically all back to normal.

Amongst the students themselves there has been a gratifying improvement in the character of their activities and in their relationship to the profession generally: this was particularly evidenced in their participation in various professional activities in the City and Province, notably in the Annual Meeting of the Engineering Institute of Canada which this year was held in Toronto. Many of these students in their control of student affairs and in their technical, academic and athletic interests have notably displayed their powers of organization and executive which are valuable features of their education in Engineering.

The Department of Civil Engineering and Applied Mechanics is being slightly reorganized mainly consequent on its removal to the new building. While the various types of equipment in testing laboratories have been fully employed there is much need for further equipment. The Departments of Surveying and Drawing, closely allied with this, have been taxed during the year with the large numbers of students: in Surveying there were 270 and in Drawing 697 carried though the various courses in this Faculty whilst there were 33 and 27 respectively of the Faculty of Forestry also provided for.

In Electrical Engineering the value of the new building is already being realized, although the removal into it will not be entirely completed until this autumn. With the two groups of laboratories in direct and alternating current and with the special instrument, high tension, radio telegraphy and research laboratories it is expected that henceforth much more effective work can be done.

In the Department of Mining Engineering there has been some advantageous modification and re-arrangement of work and an increased number of students has been accommodated. 72 students have been taking the work in the Assay Laboratory and 82 in the Milling and Mining Laboratory.

The Mechanical Engineering Department has suffered through want of additional apparatus much needed in the Steam and Hydraulic Laboratories. When it is considered that during the past Session 207 students of third and fourth years attended the Thermodynamics Laboratories each week and 197 of the same years attended the Hydraulic Laboratory each week an idea can be gained of the work performed and it must be kept in mind that the coming Session will be much heavier in point of numbers. This Department suffered a loss the past year by the withdrawal of Professor Arkley to a post in another University.

The Department of Architecture has been strengthened during the year by the addition of another Associate Professor on Design, Professor Adrian Berrington, late of Paris. The re-arrangement of space in the Engineering Building has provided this Department with very much increased accommodation. The Annual Exhibition of the Architectural Club at Hart House in March was again a very fine indication of the excellence of work done by the students in this department.

Chemical Engineering has been very crowded. The problem of providing for the large second year is comparable only with that confronting it with the same

large number next year when it is going to be almost impossible to carry them. If this Department continues to grow in numbers there will be a very serious accommodation problem in the Chemistry and Mining Building.

The Department of Metallurgical Engineering has had an opportunity for expansion during the year and it now occupies the east end of the Chemistry and Mining Building, main floor. The authorization of an Assistant Professor will greatly increase its efficiency and with the new equipment and space much is now expected of this Department.

The School of Engineering Research has now fully justified its organization within this Faculty. The grouping of the seven departments of this Faculty into one organization for research in this manner has very much simplified the administration, has co-ordinated the effort and has produced an economic efficiency which is most gratifying. During the past year the progress of the work of research has been as great as could reasonably be expected bearing in mind the load of lectures and laboratory teaching born by members of the staff. No 2 Bulletin with the results of the year's work is now in process of publication. It is interesting to note and it is with a degree of satisfaction that the members of this Faculty, busy as they have been with the regular work of instruction, have been able during the past twelve months to carry out researches on 30 subjects, divided as follows:—4 in Civil Engineering, 3 in Mining Engineering, 5 in Mechanical Engineering, 11 in Chemical Engineering, 4 in Electrical Engineering and 3 in Metallurgical Engineering.

This Faculty sustained last Autumn a very grave loss in the death of Dr. W. H. Ellis, late Dean of the Faculty; his presence with us as Professor Emeritus was regarded as of the greatest value, the Faculty relying on him very much for his wise counsel and advice. His absence is greatly felt.

(4) REPORT OF THE DEAN OF THE FACULTY OF FORESTRY.

(DR. C. D. HOWE.)

The Faculty of Forestry completed the year with the largest enrolment of students since it was established in 1907. According to classes, they were distributed as follows: First Year 20, Second Year 17, Third Year 10, Fourth Year 6, Special 1, Occasional 1—55 in all.

The year's graduates are six in number, five from the four-year course and one from the six-year course. They all had positions waiting for them, two being employed by the Dominion Forestry Branch at Ottawa, two by the British Columbia Forest Branch, and two by private companies, the Riordon Company and the Wayagamack Pulp and Paper Company, both in Quebec.

Owing to the depression in the pulp and paper trade only half as many undergraduates are employed by private companies as last summer. However, a much larger number are being utilized by the Ontario Forestry Branch and thus an otherwise embarrassing condition has been avoided. The Province is using 16 of the undergraduates for the summer months, the Dominion Forestry Branch 15, pulp and paper companies 11, the Entomological Branch 1, and private employment not related to forestry 6.

Suggested lines of development for the Faculty of Forestry were outlined to you in last year's annual report. These were elaborated in the report laid before the Royal Commission on University affairs, wherein four things were

specifically recommended, namely: (1) a permanent practice camp and forest experiment station, (2) postgraduate courses leading to the degree of Master of Forestry, (3) a forest rangers' course, and (4) a forest products museum. The materialization of the first three of the above items would involve a capital expenditure of approximately \$13,000 and an increase in the annual budget of at least \$9,000 for current expenses, in addition to the cost of a new building. We shall expect the fulfilment of these plans within the next few years, for without it we cannot attain our full measure of usefulness in the forestry education of the Province and Dominion.

(5) REPORT OF THE DEAN OF THE ONTARIO COLLEGE OF EDUCATION.

(DR. W. PAKENHAM).

The Ontario College of Education has completed its first year under its new name. Its first purpose is to train High School Assistants and Specialists for the schools of Ontario; its second to give instruction in Advanced Education. In fulfilling these purposes the College is in reality a Graduate School. During the Session it enrolled in its course for High School Assistants and Specialists ninety-seven students, in its courses for degrees in Pedagogy one hundred and thirteen, and its courses for the degree of M.A., under the Board of Graduate Studies eighteen. All these students were graduates in Arts.

Soon after the beginning of the Session a course for the Elementary certificate in Art was instituted. Twenty-four completed this course. To equip graduates in Arts for public school posts, the students in the High School Assistant's course were offered the option of a supplementary course for First Class Public School certificates. Twenty-six accepted the offer. At the same time the course for the Ordinary certificate in Household Science was transferred to temporary quarters in the College with seventeen students in registration.

The transfer of the Faculty Entrants or First Class students to the Normal Schools has reduced the total attendance at the College. But it has enabled the staff to give more time to the training of the High School Assistants and in particular to the practice-teaching in the University of Toronto Schools.

The transfer of the course for Ordinary certificates in Household Science and the emphasis now placed upon the course in Physical Training have made still more marked the limitations of the present buildings. It is a satisfaction to note that in its last session the Legislature made an initial appropriation of \$50,000 to complete the buildings.

(6) REPORT OF THE DEAN OF THE FACULTY OF MUSIC.

(DR. A. S. VOGT).

The registration of students for the course leading to the degree of Bachelor of Music was as follows: First Year, 9; Second Year, 3; Third Year, 4; Occasional students, 2; total, 18.

The number of candidates entering for the University's Local Examinations in Music during the year totalled 613. Of these 511 entered for examinations in piano playing; 26 in singing; 1 in violin; and 75 in the Theory of Music. Successful candidates totalled 553.

A series of eighteen lectures was delivered by members of the Faculty as follows:

Healey Willan, Esq., Mus. Doc., F.R.C.O.
 January 10—"Various Chords of the Seventh."
 January 24—"Modulation."
 February 7—"Harmonisation of Melodies."
 February 21—"Counterpoint" (with special reference to the minor key).
 March 7—"Counterpoint" (combined species).
 March 14—"Fugue."
 January 14—"Bach's Church Cantatas and their Libretti."

Albert Ham, Esq., Mus. Doc., F.R.C.O.
 January 28—"Bach, the Church Organist, and his Predecessors."
 February 10—"Early English Composers of the Latin School."
 February 17—"Church Anthems."

F. A. Mouré, Esq.,
 January 17—"Some Old English Worthies."
 January 31—"The Transition from the Classical to the Romantic Period."
 February 14—"The Later Romantic School."
 February 28—"Programme music."

H. A. Fricker, Esq., M.A., Mus. Bac., F.R.C.O.
 January 21—"Bach's 48 Preludes and Fugues."
 February 25)
 March 4) The Choral and Orchestral music performed at the Mendelssohn
 March 11) Choir Concerts. April 11, 12 and 13.

The special series of organ recitals given during the season by F. A. Mouré, Esq., University Organist, again created much interest and were attended by large audiences of students and music lovers generally. Mr. Mouré's programmes covered a wide range of organ music illustrative of the most important and attractive features of the foremost schools of organ composition, classical and modern.

Important changes in the relation of the Toronto Conservatory of Music to the University of Toronto.

An event of outstanding importance in the history of music in Canada transpired during the year in the completion of the steps necessary to pass the trusteeship of the Toronto Conservatory of Music from private hands to the University of Toronto. The Conservatory was founded in 1886 and after some years of operation, was established as a trust in the interests of music.

Realizing that it is essential that standards of music should, as far as possible, be set for the whole Province, and that this could be done only under the control of the Provincial University, those interested in the Toronto Conservatory of Music handed over to the Board of Governors of the University of Toronto the important trust held by them for many years for the advancement of musical education in Canada. This has been carried out under the terms of an Act of the Legislature passed in 1919. The management of the Conservatory will, therefore, in future, be directed by a special Board appointed by the University and responsible to the University Board of Governors.

It is confidently expected that real advantage will accrue to the general cause of music through the fusion of the Conservatory with the University—the Conservatory, through the agreement sanctioned by Act of Parliament, passing over to University control as a school of Music with well-established international prestige, fine equipment, and unsurpassed location. A large department of educational activity is thus being brought under the control of the Province of

Ontario without undue burden of oversight or expense to the University of Toronto or to the Province.

This new relation is not intended to interfere in any way with the development of other musical institutions, but it is confidently expected that it will tend to establish and maintain higher standards of music, and to standardize examinations under the supervision of the Faculty of Music of the University of Toronto, which examinations shall be open to the students of all other conservatories and musical bodies.

As the annual announcements relative to the Licentiate and Local Examinations in Music of both University and Conservatory had already been issued for the year, no change was made in the examination arrangements of either institution for this season. The University's Local Examinations in Music through the new arrangement will, however, in future be taken over by and conducted through the Conservatory.

(7) REPORT OF THE CHAIRMAN OF THE BOARD OF GRADUATE STUDIES.

(PROFESSOR J. PLAYFAIR McMURRICH).

The number of students enrolled for graduate studies in the Session 1920-1921 showed a slight increase over the preceding session, the total being 163. Of this number 150 were in attendance at the University and 13 were studying in absentia: 113 were men and 50 women. According to their geographical distribution the students may be classified as follows:

Residents of the Province of Ontario	135
Residents of other Provinces	16
Residents of other Countries, including Newfoundland	12
	163

and as regards their preliminary training as follows:

Graduates of the University of Toronto	118
Graduates of other Universities	45
	163

54 were members of the teaching staff of the University and 6 others were holders of fellowships but not engaged in teaching.

Their distribution in the various departments, based upon the subject chosen as the major study, was as follows: Anatomy, 1; Astronomy, 2; Biochemistry, 2; Biology, 3; Botany, 12; Chemistry, 15; Classics, 6; English, 16; Food Chemistry, 2; Forestry, 1; German, 1; Geology, 3; History, 9; Household Science, 2; Mathematics, 2; Medicine, 2; Mineralogy, 1; Oriental Languages, 4; Pathological Chemistry, 1; Philosophy, 24; Physics, 11; Physiology, 4; Political Science, 12; Romance Languages, 9; Theory of Education, 16; Zymology, 2.

The degrees sought are shown in the following table:

Candidates for the degree of Ph.D.	34
" " " " " " M.A.	95
" " " " " " M.D.	3

Students not candidates for a degree

31

During the session 52 candidates completed the requirements for the degree of M.A., 3 those for the degree of Ph.D. and 2 those for the degree of M.D. The

titles of the theses submitted for the degree of Ph.D. were as follows:

N. A. Clark: The Growth Rate of Yeast.

W. A. Lawrence: The Friedel and Crafts Reaction; some substituted Phthalic Anhydrides with Aluminum Chloride and Toluene.

M. E. Smith: The Friedel and Crafts Reaction: the Carbomethoxy-benzoyl Chlorides with Aromatic Hydrocarbons and Aluminum Chloride.

For some years, as the number of students pursuing Graduate Studies has increased, the lack of some common bond of organization has become more and more apparent. The work of the Graduate Student is specialized; he must necessarily spend the greater part of his time in the Department he has chosen and so will miss that opportunity for association with his fellow students in other Departments, which is one of the most important privileges and advantages of University life. To overcome to a certain extent the disadvantages of this isolation the graduate students some years ago organized themselves into a Graduate Students' Club which met from time to time for the discussion of matters of common interest and for social purposes. Such meetings, however, were only occasional, the Club having no definite meeting place, no habitation it could call its own. When the University Press moved to its new quarters, vacating rooms formerly occupied in the Library Building, one of these rooms was placed at the disposal of the Club to serve as a Graduate Students' Common Room, the necessary furniture and equipment being supplied partly by the University and partly by the generosity of the Student Medical Society and of the University Women's Club.

Good use was made of this Common Room after it became available and it is hoped that it may increase its usefulness in the future. It is, however, but a step towards remedying a serious defect in the organization of graduate studies. At present the graduate students have no such definite official status as is accorded to the undergraduates, an anomalous condition which becomes all the more marked in the case of graduate students who come to us from other Universities. It is hoped that this unfortunate condition of affairs will be corrected in the near future.

(8) REPORT ON RESEARCH.

PSYCHOLOGY, UNDER DIRECTION OF PROFESSOR E. A. BOTT.

1. *Psychological Tests for College Entrance Candidates.*—Last autumn a committee of the Staff decided that the value of such tests from the University point of view should be investigated. Through Professor Thorndike 500 sets of the Columbia material were procured at a reduced price. The cost of the material (\$200.00) was met by a grant of \$125 from the University and a like amount from the Committee for Mental Hygiene, a part of the latter sum being for clerical assistance.

A portion of the material was given to selected classes in the University, and subsequently by arrangement with the Department of Education, Toronto Board of Education and Principals the remainder was given to Form IV Collegiate pupils who will be writing matriculation this summer. Professors Sandiford, Lane, Pratt and Father Oliver assisted in giving the tests. The marking and collating is being done by the Psychology staff. The selection of students was as follows:

College of Education (teachers in training)	67	
Victoria College (First and Second Years)	40	
Faculty of Medicine (Second Year)	40	
St. Michael's College (First Year)	77	
.....		224
Parkdale Collegiate	44	
Oakwood Collegiate	39	
Jarvis Collegiate	41	
Riverdale Collegiate	39	
U. T. S. Form IV	40	
		203
		427

The purpose of this investigation is two-fold:

(1) To determine the prognostic value of the tests by measuring the degree of correspondence of pupils' ranking by the test score with their academic standing averaged over a number of years and verifying the result by their subsequent College record.

(2) To analyze the test results in detail with a view to adapting the material more perfectly for Canadian students.

Numerous problems are involved in each of these objectives which can only be solved by continuing the work on a statistical basis over a considerable period. The results to date are very promising judging from the correlations between the test scores and the previous marks of the students—this year's standing being not yet available.

The plan of investigation has received the fullest support and co-operation of Registrar Anglin, Inspector Rogers and Collegiate Principals and it is hoped the work can be carried forward until its practical value in the grading, promoting and advising of students who are planning to enter college has been demonstrated. Professor DeLury has suggested that all first year students in Mathematics be given the test at the beginning of next session and that their scores be made the basis of grouping for the year's instruction. Such an experiment would be of the greatest value.

2. *Analysis of voluntary muscle action.*—This problem is related to two fields of investigation. On the practical side during the past decade there has been considerable work on Applied Motion Study to determine the type of manual motion which is most economical of time and effort for a given job or operation. These studies have been conducted from the engineer's point of view with little attention to the mechanics of the body or the psychological factors involved in its functioning. On the theoretical side there are views regarding the conditions of enervation in opposed muscle groups. These however are based on physiological experiments upon anaesthetized animals.

The object of the present research is to discover the principles of voluntary muscle action by a direct method. A large number of subjects are required to perform a small movement of the wrist under accurately controlled conditions wherein the motion is graphically registered. This was made possible through the construction of special apparatus of sufficient strength and precision. A set of nine graphs under different conditions of position and load has been taken with forty medical students. Measurement of these curves reveals the nature of the movement throughout flexion and extension. Very definite results are being found. This part of the problem will be completed in the course of a few weeks.

The next step, which we wish to undertake next session, is to investigate the time relations of the voluntary nerve impulses to antagonistic muscles which produce the type of motion we have found to be characteristic. In this way the facts of muscle action can be related directly with a theory of enervation. The requirements for this investigation would be substantially the same as have been available for the problem this year.

PHYSICS, UNDER DIRECTION OF PROFESSOR J. C. McLENNAN.

A.

1. *Ultraviolet Spectroscopy*.—This research is being carried out by Professor J. C. McLennan assisted by P. Blackman and P. A. Petrie. It consists of two divisions. In the one, the aim is to map out the spectra of all the elements with a fluorite spectrograph down to the wavelength $\lambda = 1400$ Å. u. In the other, the aim is to map out, with the aid of a vacuum grating spectrograph, the spectra of all elements down to approximately $\lambda = 250$ Å. u.

2. *Series Spectra*.—This investigation is being carried out by Professor McLennan in collaboration with Mr. W. W. Shaver. The object is to work out the series spectra of the elements Lead, Tin, and Thallium. No complete series spectra for these elements have hitherto been identified.

3. *Investigation on the relations existing between certain types of series spectra and the corresponding configurations of the electron systems in atoms and of the elements mercury, sodium, helium, and hydrogen*.—This investigation is being carried out by Mr. H. J. C. Ireton who is at present working on the element mercury.

4. *On the frequency differences in the Balmer double series of Hydrogen*.—This investigation is being carried out by Professor McLennan in collaboration with Mr. P. Lowe. Its object is to measure by interferometer methods, using Lummer plates and an echelon spectrograph, the frequency differences between the doublets of the series higher than the first two numbers, these having already been determined by Merton.

5. *On the production of triatomic Hydrogen by the action of extremely short wavelengths*.—This investigation is being carried out by Mr. W. W. Shaver. In this investigation the source of the light is the arc in Helium. By means of a specially designed arrangement, the light from this arc will be projected into a stream of Hydrogen. The production of H_3 will be detected by suitable chemical reagents. It is proposed to apply the method to investigate the effect of short light waves on nitrogen and other gases as well, with a view to seeing whether a method can be worked out for the production of ammonia, etc., by the action of light in place of a catalyst.

Note: Investigations Nos. 1, 2, 3, 4, and 5 are part of a general problem which is being investigated spectroscopically, namely, the investigation of the structure of the atoms of the elements and the energy required to ionise the atom of the elements.

6. *On the condensation methods of studying the recoil particles from Helium and Hydrogen and other gases produced by the action of alpha rays*.—This investigation is being carried out by Professor McLennan, in collaboration with Mr. W. C. McQuarrie. The method is based on C. T. R. Wilson's Cloud Experiments.

In this investigation it is hoped to get visual confirmation of certain theories of atomic disintegration which have been put forward. The general object of such investigations as this one is to see whether or not it is possible to work out a method of tapping the stores of energy known to be stored up in the atoms of the elements. It is in this direction that man must look for primary supplies of energy.

7. *Study of the magnetic properties of Heusler Alloys and other ferromagnetic bodies by means of Röntgen Rays.*—This investigation is being carried out by Mr. J. F. T. Young. It is hoped by testing the differences in the effects obtained with Heusler's Alloys and with simple mixtures of their constituents, viz., aluminium, manganese and copper, to get at the origin of the ferromagnetic property which is known to characterise the alloys. The results of this investigation should have a direct bearing on the solution of the problem of ferromagnetism generally.

8. *Piezo-electric studies of the pressures generated by explosions of mixtures of various gases with air and with each other, and also by explosions of mixtures of the various constituents of paraffin oils with air.*—The object of this investigation which is being carried out by Mr. H. J. C. Ireton, who is following up the work of last year by Mr. H. R. Foreman, is first of all to collect important data on explosion pressures generated by various mixtures of gases and vapours and secondly to see if paraffin oils cannot be conserved by using, (for purposes for which it may be found they are the most suitable), the products obtained by fractional distillations.

9. *Investigations on the behaviour and properties of helium-filled incandescent filament lamps and of helium enclosed arc lamps.*—This investigation is being carried out by Professor McLennan in collaboration with Mr. F. W. Kemp, and Mr. Dobson, Director of the Ontario Hydro-Electric Laboratory, Strachan Avenue, Toronto. The object of this investigation is to see if helium can be used with advantage in the construction of illuminating agents. Some progress has already been made in producing a fairly efficient helium-filled lamp of the pointolite variety.

10. *Investigation of the natural gases of Alberta to see if they contain any of the rare gas Krypton and of the newly found isotopic form of Helium.*—This investigation is being carried out by Professor McLennan in collaboration with Mr. F. W. Aston, of the Cavendish Laboratory, Cambridge, England. Should a supply of Krypton be found available in Canada it would be of immense value to the incandescence lamp industries of the country. The investigation is being carried out by the use of the positive ray analysis method worked out by Sir J. J. Thomson and Mr. Aston.

11. *The Liquefaction of Helium.*—This investigation which is a costly one, is being carried out by Professor McLennan assisted by Mr. G. M. Shrum, in collaboration with Professor McTaggart, and with Professor Dawes, of McMaster University and Mr. John Patterson, Physicist to the Meteorological Office, Toronto.

This investigation involves the production of Liquid Air in large quantities and the production of Liquid Hydrogen in moderate quantities. The successful production of liquid Helium would at once open up a large field of investigation to the physicists, chemists, physiologists, zoologists, and botanists of Canada, for

it would enable us to study the properties of materials including chemical reactions the life of bacteria, spores, etc. at the lowest temperature attainable. This work should be carried on now that Helium is available in quantity in Canada. Full details of investigations in this field will be found in a paper by Professor McLennan on "Helium, its Production and Uses." Trans. of the Chem. Soc.

Up to date the liquid air plant has been installed and is operating successfully. The hydrogen liquefying plant has been completed and with it we have made liquid hydrogen on a number of occasions. The helium liquefaction apparatus is nearing completion and at present we are installing apparatus for purifying hydrogen and helium prior to using it for liquefaction.

B.

RESEARCH WORK NOW BEING CARRIED OUT ON THE SUBJECT OF COLLOIDAL SOLUTIONS UNDER THE IMMEDIATE DIRECTION OF PROFESSOR E. F. BURTON. Students giving part time to the work: Miss I. Giles, M.A., and Mr. E. D. MacInnes, B.A. The work in hand is a continuation of investigations begun by Professor Burton at the Cavendish Laboratory, Cambridge, England, in 1904.

Among the many interesting properties of Colloidal Solutions, such as Ferric Hydroxide, Ordinary Black Ink, Gold Suspensions, etc., two are of special importance: the fact that the particles are all electrically charged and the coagulative action of even small traces of electrolytes. At the present time, experiments of technical importance are under way as follows:

1. *Coagulation of Colloidal Solutions by Electrolytes.*—In a recent paper on this work we believe that we have added a very important contribution to this phase of colloidal work which has been a vexed one for some years.

2. *Laws of Concentration of Colloidal Particles in Suspension.*—A continuation of experimental verification of the laws regulating the distribution of particles of various sizes in suspension.

3. *Experiments to determine the value of the mass of particles directly and the charge borne by them.*—These investigations comprise direct observation by ultra-microscope of individual particles in colloidal solutions. The application of the knowledge of colloidal solutions is very wide-spread in industrial life as well as in the study of physiology. Such manufacturing operations as we have in dyeing, tanning, rubber making, cement construction, ceramics, etc., are dependent for their advancement on a knowledge of the action of colloidal solutions. We feel that we are doing authoritative work in this field.

C.

RESEARCH WORK BEING CARRIED ON BY PROFESSOR L. GILCHRIST.

The following is a statement of the research work on which he has been engaged:

1. *Study of the Electrical Stimulation of Nerves and Muscles.*—This work is carried on in collaboration with Miss McCullough in the Physiology Building under the auspices of the Military Research Committee of the C.A.M.C.

2. Study of the application of Planck's Law of Radiation to the Production of Temperature Standards and change of state.

3. Study of the Width of X-Ray Spectrum lines and the effect of Temperature of the Target on the lines.

The work of 2 and 3 was carried on at the Clarendon Physical Laboratory at Oxford during the summer of 1920.

D.

RESEARCH WORK BEING CARRIED ON BY PROFESSOR JOHN SATTERLY.

1. *The Advance of the Ripple which appears in front of an ascending column of liquid.*—When a column of liquid rises up within a glass tube which has been previously wetted, a well defined ripple appears around the sides of the tube a short distance above the liquid surface. The research consists in studying the formation and advance of the ripple and their relation to the velocity and nature of the liquid, the diameter and nature of the tube, the time of draining and so on. The work may have application in the flotation process of ore separation.

2. *Radioactivity.*—At different times prospectors bring in samples of minerals, rocks, and waters for radioactive analysis. These analyses are performed, and the methods employed depending on the specimen, and the prospector profits by the information provided.

E.

RESEARCH WORK BEING CARRIED ON BY PROFESSOR McTAGGART.

An important branch of research in Physics is the examination of electrical effects existing at liquid surfaces. In general, a small electric charge is found at any such surface as for example—around small particles in suspension in a liquid like sediment in water—or, in dyeing processes, around the fibres of the fabric when dipped in the solution, a similar charge exists at the boundaries of plant and animal cells and its influences on growth and disease are not fully understood.

The research is being limited at present to a study of the electric effects at the surface of aqueous solutions in contact with air or any gas.

Two papers on the subject have been published by the author:

1. Phil. Mag. Feb. 1914, p. 298.
2. Phil. Mag. Sept. 1914, p. 367.

The work has a bearing on such industrial problems as:

1. The purification of a water supply.
2. The production of stable suspensions in liquid, as for example, a soluble cocoa.
3. The action of mordants in dyeing.
4. Electrification in plant cells and cell growth.
5. Electrification in animal cells and its influence in health or disease.
6. The action of catalysing agents.

BOTANY, UNDER DIRECTION OF PROFESSOR J. H. FAULL.

Papers have been published as follows:

1. "Some Characters of Xylem Tissue in Cycads." *Botanical Gazette*, December, 1920.
2. "The Seeds of Poisonous Weeds in Concentrated Feeds." *Canadian Veterinary Record*, November, 1920.
3. "Canadian Plants Injurious in Hay and Coarse Feeds." *Canadian Veterinary Record*, March, 1921.

4. "Longevity of the Seeds of Cereals, Clovers and Timothy." *American Journal of Botany*, June, 1920.

(The last paper was published during the University year 1919-20, but was too late to be included in the report for that year.)

In addition to the above the following projects are under way:

1. *Poisonous Plants of Canada*.—In collaboration with Professor Thomson, a book on this subject has been prepared and is now practically ready for publication. It is for use as a text book for Veterinary students, but there is also an outside need in Canada and the United States as well. It is illustrated by photographs and drawings, and aims to set forth in simple language, the published conclusions of other investigators, as well as the writer's results with poisonous weed seeds in ground feeds. It differs from any former work in two ways. The plants have been grouped on the basis of the conditions under which they cause trouble rather than strict botanical sequence, so as to make the volume more useful to veterinarians and stockmen. There is included a key, based, not on botanical characters but on symptoms.

2. *Anatomy of Uicula maculata*.—This project was undertaken because of the need for knowledge of the histology of this poisonous plant in the analysis of stomach contents in cases of poisoning. As the work progresses it is proving equally interesting from the standpoint of comparative anatomy.

3. *Investigation of Poisonous Weed Seeds*.—This project is following two lines, pharmacological and histological. In the former, the Pharmacology Department of the Faculty of Medicine is co-operating. Supplies of pure seed have been obtained and are being fed to various small animals and their effects noted. For practical purposes these effects should be correlated with their effects on other animals. In the second place, as various seeds are proved to be poisonous their histology will be worked out so that they may be identified microscopically when ground up in concentrated feeds.

ZYMOLOGY, UNDER DIRECTION OF PROFESSOR H. B. SPEAKMAN.

Earlier in the session the Department was transferred from the old laboratories to new and larger quarters situated in the Medical Building. The work of the Department has been improved by being brought into closer contact with related subjects. In addition, it is now possible for students to enter more fully into the life of the University.

During the year several new fields of research have been opened, and a broader basis given to our work. At the present time none of the work is completed and ready for publication. This is due in part to the fact that at the commencement of the session two months were lost owing to delays in the arrival of essential equipment for the laboratories.

Mr. Wynne has continued his study of the influence of numerous acids, over a wide range of concentration, on the fermentation of starch. His results are not only of interest as a source of new light on the biochemical mechanism of a particular organism, but are of value from the general physiological standpoint.

During the second term Miss Howell has made preliminary observations in connection with the influence of X-ray treatment on the growth and metabolism of some of the lower plant forms, particularly molds and yeasts. This is a problem which, in addition to its scientific interest, may yield results capable of clinical

application. The work is being done in co-operation with the Department of Physics, on behalf of the Medical Research Committee of the Department of Health, Ottawa.

In connection with the application of the work of this Department in the solution of economic problems two investigations have been carried out. Mr. Berkeley has endeavoured to find means whereby the abundant supplies of sulphite liquor in this country, now being wasted, could be utilized in general fermentation industries. Although the problem is an old one, as is shown by the literature on the subject, he has made a contribution to its solution by studying the effect of the liquor on pentose fermenting bacteria. The pentose sugars are present in large amounts, and are not fermented by the great majority of yeasts. For this reason the yield of ordinary alcohol from sulphite liquor, fermented by yeast, is very low. The pentose fermenting bacteria are characterized by their valuable end-products. Mr. Berkeley's results show that eventually these sugars will be utilized. He has presented a full report on this work to the Advisory Council for Industrial and Scientific Research.

Mr. Robinson has investigated in a somewhat similar manner the possibility of utilizing molasses. By very convincing experimental results he has shown that inhibition of the fermenting cells is due to a high concentration of soluble salts in the molasses. This obstacle has been overcome, and the yields of acetone and butyl alcohol are equal to those from starch in commercial plants. His work has been the subject of several reports made to the Atlas Powder Company, Ltd., which company has supported this investigation.

Mr. Robinson has been able in connection with the work to make a study of the relationship between molecular structure in several of the groups of sugars and their fermentability by the same bacillus. His results are of theoretical value and will probably be ready for publication later in the year.

Mr. Forsythe during his fourth year as a student in the Department of Chemistry has taken his elective special subject in this Department. He has started a study of the fermentation of glucose by bacillus aceto-ethylicum, and already valuable results have been obtained.

BIOCHEMISTRY UNDER DIRECTION OF PROFESSOR A. HUNTER.

I have the honor to submit the following report upon the researches which have been in progress during the past year in the Department of Biochemistry.

(1) I have continued my study of the manner in which protein is hydrolyzed under the influence of the ferment trypsin, and of the products arising at certain stages of the reaction. This research has proved to be of greater difficulty than was anticipated, and as I am able to take it up only intermittently, the progress made has not been very rapid. Some definite results have nevertheless been obtained, and have been recently presented to the Royal Society of Canada in a preliminary note. Among other things it has proved possible to isolate a polypeptide, or mixture of polypeptides, which is particularly rich in histidine and proline, and from which lysine (and probably also arginine) is entirely absent.

(2) Mr. N. S. Clarke is engaged in work similar to my own, but dealing with a different protein. He has encountered the same difficulties as I did, and is hardly ready yet to report progress.

(3) Mr. Borsook has commenced a study of the differences in amino-acid makeup between various proteoses derived from hemoglobin.

(4) Mr. Urquhart has been studying the possibility of obtaining unsaturated acids by the action of bacteria upon amino-acids. He has conformed the observations of Raistrick upon the origin of urocanic acid from histidine, and is now endeavoring to produce cinnamic acid in a similar way from phenyl-alanine.

(5) Mr. Morrell has succeeded in working out a technique which makes possible the determination of arginine by the combined action of the enzymes arginase and urease; and has commenced a study of the kinetics of the action of arginase.

(6) Mr. Green has completed a preliminary study of the progress of protein hydrolysis under the influence of strong acids.

(7) Mr. Berkeley is studying the metabolism of certain fungi of economic importance, and has already obtained results of some importance.

PHYSIOLOGY UNDER DIRECTION OF PROFESSOR J. J. R. MACLEOD.

J. J. R. MACLEOD, S. U. PAGE, AND L. H. KILBORN—

In continuance of the investigations into the mode of control of the respiratory centre in decerebrate animals, which were published in the March number of the *American Journal of Physiology*, the attempt has been made to determine whether evidence of excitement first sets in at the moment when the arterial blood becomes measurably unsaturated with oxygen. To determine this important point, the minute volume of breathing has been compared with the oxygen dissociation curve of the arterial blood and with the tension of oxygen (and carbon dioxide) in the alveolar air. The results have been satisfactory and it is hoped that during the summer one or more papers will be ready for publication. The practical importance of these investigations centres on the light they throw on the mechanism for the exchange of gases between the blood and air sacs and on the effect of breathing oxygen in the relief of the symptoms of pneumonia and other forms of disease in which there is pulmonary disturbance.

J. J. R. MACLEOD—

Further work has been done on the significance of lactic acid in the animal economy and one paper was published (in the *American Journal of Physiology*) on this aspect of the work during the year. In the earlier months of the year the attempt was made to cause lactic acid to accumulate in the blood by "blowing off" the carbon dioxide of the blood by forced ventilation of the lungs. Such a decrease in the volatile acid of the blood, it was thought, might cause more volatile acid, such as lactic, to take its place so as to maintain at a constant level the total acid radicles in the blood. The results were negative. More recently, work has been done on the rate of disappearance of lactic acid from the organism when certain quantities of this substance are injected intravenously, as well as, on the rate at which it appears in blood after this has been removed from the body. The results in these two particulars are definite and will be published shortly. In this research the painstaking assistance of Miss M. E. Armour has been invaluable.

J. J. R. MACLEOD AND N. B. TAYLOR—

With the assistance of a grant made by the Department of Militia and Defence, work has been continued on the spread of temperature changes in living tissues during the application of heat or cold to the surface of the body. The spread of heat is measured by means of small thermocouples enclosed in hypodermic needles which are placed at varying depths in different regions of the body. The

thermocouples are connected with a potentiometer and galvanometer so that very minute changes in temperature can be measured. Professor Burton of the Department of Physics has greatly assisted us in this work. Very important practical results have been secured, such as, that temperature differences spread very readily in resting muscle, in subcutaneous tissue and in the brain but that the spread is very slow in the liver and kidneys. Many of the results of these investigations have already been published during the year in the *Lancet*.

J. J. R. MACLEOD, E. C. NOBLE AND C. H. BEST—

An investigation is under way into the behaviour of the sugar of the blood in turtles. The research is designed to determine whether variations occur in the concentration of this substance under conditions similar to those which are known to cause them in mammals. If this should be found to be the case an opportunity will be afforded to study certain problems in carbohydrate metabolism which it is difficult to undertake in mammals.

N. B. TAYLOR—

Work on the volume of blood flow through the hands under various physiological conditions is being continued with and an extensive paper has been prepared for publication in *Heart*. Many interesting facts have come to light such as that drafts have a profound effect in changing the blood flow whereas massage has very little influence. A very close relationship between the atmospheric temperature and the blood flow has been demonstrated. This investigation has been assisted financially by the Department of Militia and Defence.

N. B. TAYLOR AND H. M. CAMERON—

In the course of the practical class work it was discovered that Mr. Cameron, a third year student of medicine, exhibits a very unusual phenomenon, namely that he can accelerate the heart beat and raise the blood pressure voluntarily without doing muscular exercise. The phenomenon is being thoroughly investigated by all known methods and for this purpose Mr. Cameron has been temporarily appointed on the staff of the department for part of the summer vacation. This is made possible by aid received from the Research Fund. It is by the investigation of problems of this nature *i.e.* of cases bordering on the pathological, that important facts of clinical value can often be brought to light.

N. B. TAYLOR, J. M. D. OLMSTED, MISS J. LANG AND E. H. CRAIGIE—

An attempt is being made to study the position of the pathways of the spinal cord that transmit various types of impulses between the memory centres of the brain and the lower motor centres of the spinal cord. Encouraging results have been secured in one animal.

MISS H. I. EADIE—

The physical constants and the general reliability of the so-called "confimeter" of Leonard Hill have been determined. The instrument is devised to measure the rate of the cooling influence of the atmosphere, with the hope that the instrument may be useful in studying the problem of ventilation. The research has been assisted by the Department of Militia and Defence and several definite and probably useful results have been obtained. These will be published shortly.

J. M. D. OLMSTED—

The histological changes which occur in taste buds after cutting their nerve supply have been carefully studied with significant and perfectly definite results. The problem is important because it shows the nature of the relationship which ex-

ists between a sensory nerve ending and its nerve fibre and in no other case can this relationship be so satisfactorily worked out. A paper embodying many of the results was published during the year.

CHEMISTRY UNDER DIRECTION OF PROFESSOR W. LASH MILLER.

Widespread interest in chemistry due to the war is no doubt responsible for the large number of students engaged in chemical research during the past year; it seems unlikely that this condition will be permanent. Of these research students, two held appointments from the Honorary Advisory Council, thirteen were half-time assistants, and twelve were undergraduates of the fourth year in the honor departments of chemistry or chemistry and mineralogy I. In addition, six undergraduates of the fourth year in the faculty of Applied Science spent about half their time in elementary research work on electrochemical problems. The supervision of the various investigations was divided among the professors of the Department; titles and brief abstracts of the results of twenty-eight of them have been sent to the Royal Society of Canada for publication, fuller accounts of some of them will appear next winter in the chemical journals. In addition, during the year twelve papers were published from the Department, giving detailed results of work completed before the beginning of the academic year; a list of the titles may be found in appendix E., under the title "publications of members of the staff."

Three graduate students were awarded the degree of Doctor of Philosophy, viz:— Mr. N. A. Clark, with a thesis "The influence of certain chemicals on the rate of reproduction of yeast" (Professor W. Lash Miller); Mr. W. A. Lawrance, "Nitrophthalic anhydrides and acetylamino-phthalic anhydrides with toluene and aluminium chloride." (Professor F. B. Allan); and Mr. M. E. Smith "Carbethoxy-benzoyl chlorides with aluminium chloride and various aromatic hydrocarbons" (Professor F. B. Allan).

Seven obtained the degree of Master of Arts, viz:—Mr. C. S. Gilbert, with a thesis "A study of the extent to which various liquids can be superheated and of the conditions under which superheating is possible" (Professor F. B. Kenrick); Mr. G. Haas, "Solubility of crystal faces" (Professor Kenrick); Mr. W. B. Leaf, "The action of methyl-green on yeast" (Professor Miller); Mr. T. C. McMullen "The intermediate compounds in the reaction between phthalic anhydride benzene, and aluminium chloride, and their use in the synthesis of mixed phthalides" (Professor Allan); Mr. J. W. Rebbeck "The dissociation pressures of Spencerite, a basic phosphate of zinc" (Professor J. B. Ferguson); Mr. H. N. Stephens, "Bromphthalic anhydrides with benzene and aluminium chloride" (Professor Allan); Mr. G. A. Williams, "The passage of hydrogen and of helium through tubes of silica glass" (Professor Ferguson).

GEOLOGY UNDER DIRECTION OF PROFESSOR A. P. COLEMAN.

Between June 9th and September 18th, 1920, an investigation was made as to the thickness and extent of the Cordilleran Ice Sheet. In the course of the work twenty ascents were made to elevations of 5,000 to 10,000 feet, and it was proved that the ice rarely reached 8,000 feet and was usually much below that level. It was proved, also, that the area covered by the Cordilleran sheet was less than had been assumed hitherto.

While the results obtained threw important new light on the subject, nothing has been published, since it is hoped that much more complete data can be obtained during the coming summer.

PALAEOLOGY, UNDER DIRECTION OF PROFESSOR W. A. PARKS.

During the year one of the skeletons obtained by the Research Expedition of 1919 has been prepared and mounted. While the specimen does not represent a new species, it reveals several new points in the anatomy of the head, and for the first time shows the structure of part of the body. An illustrated article on the specimen has been prepared for presentation to the Royal Society of Canada.

Preparation has also been well advanced on one of the skeletons obtained by the expedition of 1920: it certainly represents a new genus and species of dinosaur which will be described next year.

The means of transportation granted from the Research Fund has enabled us to secure much material from the vicinity of Toronto which has resulted in the preparation of a monograph on the Bryozoa and Brachiopoda which will appear in the forthcoming report of the Ontario Department of Mines. The same facility of transportation has resulted in the discovery of an hitherto undescribed exposure of Utica shale on the Rouge river and has furnished material for an article on the Trilobita to be presented to the Royal Society.

A redescription of some of the Conularidae of the Lockport limestone has also been prepared for publication.

MINERALOGY, UNDER DIRECTION OF PROFESSOR T. L. WALKER.

The money available for research in the Department of Mineralogy has enabled the staff to have the assistance of Mr. E. W. Todd as a chemical assistant in mineralogical research, to secure apparatus specially needed and to conduct field work for the month of June in the triassic trap region of Nova Scotia. Thirteen papers containing the principal results of our investigations are contained in an issue of the University Studies entitled "Contributions to Canadian Mineralogy, 1921." It is highly desirable that money should be provided to secure part time services of recent graduates who, while providing further relief for the staff for research, might, as graduate students, follow up their studies as candidates for higher degrees.

DEPARTMENT OF MEDICINE, UNDER DIRECTION OF PROFESSOR GRAHAM.

The staff of the Department of Medicine feels that, for the present at least, our main effort must be directed towards the proper training of the large number of students in attendance and the thorough clinical investigation of cases on the wards. With these ends in view, teachers' meetings have been held for the discussion of methods of teaching and the subject matter to be taught, and cases on the wards have been investigated from both the clinical and laboratory standpoint and accurate records of them have been kept. A certain amount of pure research is being carried on, the details of which are given below.

A. During the past year, Dr. A. A. Fletcher has been engaged on a metabolic study of cases of chronic arthritis. Pemberton, investigating cases of arthritis among soldiers of the American Army, found that the tolerance to glucose was frequently lowered in cases of chronic arthritis. Dr. Fletcher has attempted in his investigation to answer the following questions:—

(1) Is the lowering of the sugar tolerance an index of the severity of the disease?

2. Does the degree to which the sugar tolerance is lowered determine the suitability of such cases for dietetic treatment?

During the past 14 months the blood sugar reaction to administration of 100 grams of glucose has been estimated in over 110 cases of chronic arthritis, and in about 70 of these, the results of diet, low in carbohydrates, has been carefully observed. From this work it has been found:—

1. That the sugar tolerance in chronic arthritis shows great variations in different cases, but is remarkably constant in the individual cases, over a long period of time.

2. That the lowering of the sugar tolerance is no indication of the severity of the disease, nor does the tolerance return to normal when convalescence sets in. This is not in agreement with the conclusions of Pemberton in army cases.

3. That most cases of arthritis are favorably influenced by dietetic treatment, and that the degree and probability of benefit varies directly with the lowering of the sugar tolerance. Cases showing blood sugar figures up to 3 mgs. per cc., after 100 grams of glucose, are in our cases always much improved and sometimes cured by such treatment.

4. That female cases of arthritis show as a rule a much lower tolerance than the males, and are more frequently benefited by reduction of diet. This would indicate that in men other factors play a more important part in the production of arthritis, as for example, fatigue, exposure, etc.

5. That there is a close association between infection and sugar metabolism. Further work is indicated on this question.

6. That a simple diabetic diet alone is not suitable unless containing adequate vitamins, especially vitamin "A."

B. Careful clinical and laboratory studies were made last year on the cases of "Flu" treated in the hospital. In conjunction with the department of Pathology and Bacteriology, two important papers have been published on the Aetiology of Influenza:—

1. The Aetiology of Epidemic Influenza: Experiments in search of a Filter-Passing Virus.—H. B. Maitland, Mary L. Cowan and H. K. Detweiler.

2. Spontaneous and Artificial Pulmonary Lesions in Guinea-pigs, Rabbits and Mice.—H. B. Maitland, Mary L. Cowan and H. K. Detweiler.

C. During the past winter all cases of pneumonia have been carefully studied. Their clinical investigation is still in progress. In November Dr. Detweiler began a study on the route of infection in lobar and broncho-pneumonia. Twelve experiments were performed in attempting to throw light upon the possibility of producing experimental pneumonia by infection of the lymphatics of the upper trachea, to the exclusion of other routes. Many difficulties were encountered and the work had to be temporarily discontinued at New Year, owing to the resignation of the skilled laboratory technician and the necessity of taking over his work as well as training a successor. It may be mentioned, however, that ten of the animals showed evidence of lung infection, in a more or less degree. This investigation will be resumed as soon as time permits.

D. Studies in the Wasserman reaction during pregnancy and pneumonia are in progress.

E. During the past two years Dr. W. R. Campbell has been engaged in a clinical and laboratory study of cases with kidney disease. A publication will be made shortly on the practical application of simple methods for the diagnosis and treatment of renal disease.

F. Clinical and laboratory investigations on the following diseases are now in progress:—

- (1) Exophthalmic Goitre.
- (2) Diabetes Mellitus.
- (3) Pneumonia.
- (4) Endocarditis.

G. During the "Flu" epidemic in 1920, an attempt was made to study in co-operation with the department of Physiology, the blood flow in the hands of patients suffering from "Flu," especially those showing cyanosis. Owing to the difficulty in using the apparatus then available, Dr. Taylor, of the department of Physiology, has devised a new apparatus suitable for use with bed patients. Investigations using the new apparatus will be carried on this year. Financial assistance for this work is being provided by the Special Research Fund.

H. In order to obtain more accurate information of the topographical anatomy of the chest, a combined clinical and X-Ray study of the chest is being made on fifty or more normal adults. This research is being carried on with the assistance of Dr. Richards of the X-Ray department of the Toronto General Hospital. Financial assistance for this work is also being obtained from the Special Research Fund.

Sub-Department of Paediatrics (Dr. Alan Brown).

Several problems are now under investigation in the Nutritional Research Laboratory at the Hospital for Sick Children. Partly because of delay from lack of suitable material, and partly because the work involves much detail, the completion of these problems necessarily requires a considerable period of time. One in particular was begun about a year ago, and there is no prospect that it can be finished before the end of the academic year. These problems are as follows:—

(1) The retention of the fat, nitrogen and the more important salts of the diet by children suffering from chronic intestinal indigestion, and by those who are making a good recovery from the same. Two cases were studied last spring, the food, urine and feces for five and six day periods respectively, being collected and analyzed. Neither represented an extreme stage of the condition; one child being well advanced in recovery, and the other showing considerable improvement. No new case has been available until this spring, when a mild case came under observation. The material for the preliminary period has been collected, and the analyses are under way. It is hoped that material can be obtained later, after a definite recovery has taken place.

(2) Retention of the chief food elements in acrodynia—Two cases have been studied. The analyses for the second case will be completed shortly, and the work will be ready for publication before the end of the academic year. The case in which the work is finished showed nothing out of the normal in the behaviour of fat or the various salts, but showed an abnormally low nitrogen retention. The excessive loss of nitrogen occurred through the urine, though the feces, small in actual amount, contained an unusually high proportion of nitrogen.

(3) The difference between the retention of fat, nitrogen, and salts by children fed dilutions of whole milk, and that by children taking the same dilutions of whole milk powder dried by the hot spraying method, is now under way. The observation should be made on a number of different children, and the completion of the work may be delayed.

Other work has been done during this year as material has come to hand as follows:—

(1) The investigation of the fat content of the stools of an infant suffering from pyloric stenosis, just before and just after operation, to determine the proportions of split and unsplit fat as an indication of the presence or absence of the normal amount of lipase. For controls the same work was done on the stools of two infants of similar age without pyloric stenosis but suffering from diarrhoea. A much larger proportion of unsplit fat was found in the feces of the child with pyloric stenosis, than in either of the other infants. However, the work should be repeated with other cases of pyloric stenosis before any conclusions can be drawn.

2. The fat, nitrogen and salt retention of a girl suffering from epilepsy was studied. She had a good appetite and excellent digestion. She showed very good retention of fat and nitrogen, but rather peculiar salt behaviour. There was a very large retention of calcium, magnesium and phosphoric acid, but rather small of potassium, sodium and chlorine.

3. Nitrogen partition in the urine of marantic infants with mild nose and throat infections. Not enough work has been done yet. Two cases showed high urea on successive days, and two very low. The stools were not collected. It will probably be necessary to collect these in order to distinguish between cases with and those without diarrhoea.

(4) Two cases of diabetes, one an infant, were followed for a long period. Daily determination of total sugar in the urine, and for a considerable part of the time quantitative determination of acetone and diacetic acid were made.

(5) Completion of the work on calcium in the blood in tetany by Dr. R. W. Simpson in collaboration with Dr. Alan Brown.

(6) Determination of organic acids free and combined by Van Slyke's method in as many as possible of the urines of infants and children that have been collected quantitatively for any purpose. It is hoped that some instructive tabulation of results can be made when enough data have been collected.

(7) Investigation of the nature of the unidentified rest in dried feces, sometimes amounting to over 30%, not fat, protein or ash. Samples of feces left from other investigations are used. Determination of organic acids in these samples is being made. Not much time has been spent on this work yet.

The work of the Research Fellows:—

Dr. Gladys Boyd has been carrying on three problems:—

1. Study of nephritis in children from the point of view of the chemistry of the blood and the urine. This work is nearly completed and will soon be ready for publication.

2. Study of sugar tolerance of infants. Not much progress has been made in this.

3. Study of the toxins of burns. This is being done in collaboration with Dr. Bruce Robertson, Department of Surgery. Material is being obtained from animals as well as from cases of burns brought to the hospital, where exsanguination transfusion is used.

Dr. Boyd hopes during the summer to investigate the toxins of summer diarrhoeas along the same lines as that in which the work on burns is being done.

Dr. A. P. Hart has just completed an investigation of the cause of the ammoniacal diaper and his paper is now ready for publication.

Dr. Hart has begun an investigation of the hemoglobin of the blood in rickets, and the change in it as a result of treatment, using the Palmer and Van Slyke methods for the determination of hemoglobin.

Dr. Hart has also collected data from all available cases on sugar tolerance in rickets.

Report of the Committee in Charge of the Fund for Experimental Research.

The Committee have had the sum of \$5,000.00 available for the purposes of Research, during the session 1920-1921. The following statement indicates the manner in which the funds have been utilised for the period mentioned and includes, in addition, a report on certain uncompleted investigations which were, in part at least, financed by funds provided prior to June, 1920.

First: *Uncompleted investigations which are still in progress and were financed from funds provided prior to June, 1920.*

(1) EXPERIMENTS ON BASAL METABOLISM

Necessary apparatus was provided and the investigations are still in progress. The results will soon be available for publication. The Research is being conducted by Dr. F. W. Rolph.

(2) RESEARCH ON NIPPLE TOXINS

This research was conducted by Dr. Dobbin under the direction of Professor J. J. MacKenzie. The latter obtained the necessary funds for the Research from the Committee.

(3) RESEARCH ON DEMENTIA PRECOX

Dr. C. K. Clarke was provided with funds to the extent of \$500.00 which was to be utilized as part of the salary of Miss LeDrew, who was engaged by Dr. Clarke to tabulate statistics. Dr. Clarke reports that while most useful information has been obtained it is too soon to utilise this for publication.

(4) RESEARCH ON INFLAMMATION AND REPAIRS IN TENDONS AND FASCIA

Dr. W. E. Gallie and Dr. LeMesurier are carrying on a Research to illustrate the clinical phenomena which present problems for solution in connection with inflammation and repair in tendons and fascia. The results of these investigations will be published immediately.

(5) RESEARCH ON THE CELLULAR ACTIVITY OF TESTES

Dr. W. E. Gallie has obtained permission of the Committee to investigate the cellular activity of the Testes after such procedures as the Bevan operation. The investigation is in progress.

(6) RESEARCH ON ANAEMIA

Dr. N. M. Keith was granted permission to conduct a series of experiments on Anæmia. Shortly after the investigation was begun Dr. Keith was transferred to the Clinic of The Mayo Foundation, Rochester, Minnesota. The investigation will be continued by Dr. Almon Fletcher.

Second: *Investigations financed from funds available after June, 1920.*

(1) RESEARCH ON BURNS

Dr. L. B. Robertson was granted permission to study the toxic products contained in the blood of patients the victims of severe burns. Results of value and interest have already been obtained and the Research is still in progress.

(2) RESEARCH ON INFECTION IN THE KIDNEY

Dr. J. C. McClelland was granted permission to study the modes of infecting the Kidney. The investigation is still in progress.

(3) RESEARCH ON THE EFFECT OF X-RAY TREATMENT UPON THE OVARY

Dr. Richards and Dr. Shouldice were granted permission to investigate the effect of x-ray treatment upon the Ovary. This work is in progress.

(4) RESEARCH ON THE ETIOLOGY OF INTUSSUSCEPTION

Dr. D. E. Robertson was granted permission to conduct experiments in order to study the method of production of an intussusception. The work is still in progress.

(5) RESEARCH IN CREATINURIA

On application of Professor Harding, funds were provided for Mr. O. H. Gaebler to conduct a Research on Creatinuria.

(6) RESEARCH IN PSYCHOLOGY

Funds were provided for Dr. Bott for experimental investigations in Psychology.

(7) RESEARCH ON THE NORMAL RELATIONS OF VISCERA

Drs. Detweiler and Jamieson were provided with funds for the purpose of studying the normal relations of the Viscera.

(8) RESEARCH ON PERITONITIS

Dr. Costain was granted permission to conduct an investigation on the etiology and treatment of Peritonitis. The work is in progress.

(9) APPARATUS FOR RESEARCH

Dr. Armour was granted permission to purchase a Microtome of large size for the purpose of cutting sections of the Brain, to be utilized in the study of the anatomy of the Brain.

(10) APPARATUS FOR RESEARCH

Professor Duncan Graham was provided with funds for the purpose of constructing Calorimeter moulds and Sleeves to be used in the study of the rate of the Blood Flow.

THE SCHOOL OF ENGINEERING RESEARCH

The progress of the School of Engineering Research during the past year, has been as great as could reasonably be expected, bearing in mind the load of lecture and laboratory teaching borne by members of the staff.

The publication of Bulletin No. 2, has unavoidably been delayed by the pressure of this latter work. However, the papers embodying the results of the investigations are now in course of preparation and will be shortly in the printer's

hands. The bulletin, it is expected, will be ready for circulation during the summer. Following are some of the subjects of investigation which have been completed and with which the bulletin will deal:—

Professor P. Gillespie:

The operation of the Imhoff Sewage Sedimentation Tank in America—The Strength of Gypsum—Slabs doubly Reinforced with Steel—An investigation of the Effect of Certain Variations in Concrete Mixtures Upon the Strength and Other Properties—in collaboration with the American Society for Testing Materials.

Professor C. R. Young:

Investigation of the True Net Section of Rivetted Tension Members.

Professor H. E. T. Haultain and Professor F. C. Dyer:

The Analysis by Photography of the Paths of the Balls in a Ball Mill.

Professor F. C. Dyer:

Apparatus for the Quantitative Determination of the Magnetic Contents of Ores.

Professor J. T. King:

Improvements in the Apparatus for Graphite Assay.

Professor J. H. Parkin:

The Toronto Aerodynamic Laboratory.

An Investigation of Various Types of Micromanometers. Studies with a Full Scale 4 ft. N.P.L. Type Wind Channel to Determine the Best Form of Intake to Overcome Disturbances Due to Eccentric Position in the Building, and the Presence of Large Obstructions.

Wing Tip Research—Part 1

The Effect of Plan Form and Variation in Camber.

An Investigation of the Characteristics of the Belliss and Morcom Governor.

Professor J. W. Bain:

Improvements in the Method of Production of Zirconium Oxide from its Ores.

A Study of the effect of Alteration of Conditions in the Distillation of Wood.

Professor M. C. Boswell:

Contributions to the Theory of Solution.

(1) Catalytic Reduction in Acid Solution.

(2) (With H. C. Soehner), Rates of Action of Magnesium upon Solutions of Sulphuric, Hydrochloric, and Acetic Acids of Various Concentrations.

(3) (with H. C. Soehner), Rates of Action of Magnesium upon Solutions of Potassium Chloride, Sodium Nitrate, Potassium Sulphate, Barium Chloride, and Ammonium Chloride, of various Concentrations.

(4) The Solubilities of Magnesium Hydroxide and Calcium Hydroxide in Solutions of Potassium Chloride.

(5) (with R. C. Cantelo). The Vapor Pressures of Sulphuric Acid, Potassium Chloride etc., of Gradually Increasing Concentration.

(6) (with R. C. Cantelo), The Mechanism of the Action of Nickel in Hydrogenation.

The Determination of Magnesium in the Presence of Potassium.

The Production of Oxalic Acid from Wood Waste.

A Method for the Large Scale Production of Absolute Formic Acid.

Professor H. W. Price:

The Effect of Magnetic Leakage on the Flux in the Core, the Magnetizing Current, and Core Losses in Current Transformers.

The Effect of the Position of the Primary Conductor on the Errors through Type Portable Current Transformers.

Determination of Turn-ratio of Current Transformers.

The Effect of Various kinds of Primary and Secondary Shunts on the Characteristics of Current Transformers, and Methods of Applying them to Minimize the Errors of Current Transformers Operating on Fixed Burdens.

Professor G. A. Guess:

The further Investigation of the Conditions in the Electro Refining of Nickel.

The Recovery of Silver from Zinc Retort Residues.

The Determination of the Extent to which the Desulphurization of a Copper Ore may be Carried and Still Enable a Gas to be Manufactured Sufficiently High in Sulphur Dioxide for the Production of Sulphuric Acid—a Problem of the Tennessee Copper Company.

(9) REPORT OF THE LIBRARIAN. (H. H. LANGTON, Esq., M.A.).

I beg to submit the following report on the Library for the year ending June 30th, 1921.

The number of volumes added to the Library during the year is 7,838; the number of pamphlets added during the year is 1,530; making a total of 168,418 bound volumes and 54,176 pamphlets in the Library.

The statistics of the use of the Library by students, with comparisons of the two previous years, are as follows:

	1918-19	1919-20	1920-21
No. of books taken out during day	26,698	41,128	41,483
No. of books taken out for the night	10,920	16,583	17,321
No. of books taken out for a week	4,360	4,589	4,687
Average number of students in Reading room at any one time	57	77	75

The use of the Library by students has remained almost stationary as compared with the previous year, but this condition is not likely to be more than temporary. Two additional Reading Rooms, formerly occupied by the University Press, have been prepared for use, and, as soon as the Library Staff can be augmented to enable them to be under supervision, they will be opened to the students. Another large room in the basement has been temporarily in the occupation of the graduate students during the latter part of the year.

The increased cost of books and periodicals in all countries necessitates a large increase in the appropriation for the Library, even without considering the demand by all University departments for more extensive purchases. If the University is to maintain its place among the Universities of Canada, especially in the matter of post-graduate work, a much larger appropriation for books and periodicals must be made in the immediate future.

The appointment of Mr. W. Stewart Wallace as Assistant Librarian at the beginning of the year has proved a very important step in improving the efficiency of the Library. The time of the Librarian has been so largely taken up with routine work and the ordinary problems of administration that very little attention could be given to new departures. The Assistant Librarian at the beginning of the year visited several of the more important University Libraries

in the United States, studying methods and bringing back with him information as to the experiments being tried in other places for the purpose of making their Libraries more interesting and helpful to undergraduates. Although want of space and funds has prevented these new ideas from being put into practice, for the present at least, they are receiving consideration and attempts will be made to carry out some of them at the earliest opportunity.

(10) REPORT OF THE DIRECTOR OF THE DEPARTMENT OF SOCIAL SERVICE. (PROFESSOR J. A. DALE).

In presenting the report of my first year as Director of the Social Service Department, I have many acknowledgements to make. The University, by its foundation of a chair in Social Science, has given formal recognition of the existence of a body of organized knowledge, at once liberal and applicable to the practice of social service. It is a pleasure to record that two of the most important of recent contributions to social theory have come from my predecessor, R. M. MacIver, who has given the Department, both as Director and teacher, the tradition of sound learning, whose evidence is in his books.

The other essential to a school of social service is practice work. It would not be possible to find satisfactory clinical experience for so large a number of students, except for the generous co-operation of social agencies and their officers: and would not be easy without the existence of a group of organized agencies such as the Neighborhood Workers' Association. Miss McGregor has built up a system of field work which depends chiefly on the supervisors, and partly on the correlation of the practice with the study of case-work. To these supervisors our debt is heavy. At considerable trouble, and for no reward, they take charge of the student's work in their department, and prepare the most careful reports, which are invaluable for record and for guidance in making recommendations for employment. As the Department develops it should definitely retain the services of a certain number of supervisors by arrangement with their agencies, instead of depending (and sometimes, I fear, trespassing) on their kindness. At the same time, it is only fair to add that practically every agency whose help has been sought, has regarded it as a privilege and a duty to give practice facilities with skilled instruction. The employment of trained workers is not only the truest economy for the work's sake, but makes possible that concerted action which gives the best service to the needy and the best practice for the student. This employment of qualified workers at once raises the standard of service and of training, and attracts good students: while the employment of poorly qualified workers in all three ways depresses the standard.

Registration.

The registration of full time students was 61, which exceeded the limit we had set, and crowded our field work. The average age of these students was 27: 35 were between 20 and 30, and 4 below. The total registration was 366, of whom 18 were men. The number examined was 277: first year certificates, 32 (in addition 5 were conditioned): diplomas, 5 (2 more were conditioned). The overwhelming majority came from Ontario—outside Toronto 160, Toronto 151. There were in addition 296 registered in short courses.

Entrance.

The entrance qualification is a matter of some difficulty, and new regulations have been drawn up for next session. Briefly, these set age limits of 21

and 35, and more clearly define the academic requirements. While giving full discretion to accept applicants who can offer evidence of successful social service and sufficient general education, these regulations aim to encourage students who are still of school and college age, to take a college course if possible; if not, to take a shorter university course, with subjects selected for their preparatory value, or at least to take matriculation,—normally, the minimum standard. We are working on a university course, two years preparatory and two in the Department, which we hope will become the normal course of those students who on leaving school desire to take up social training and are unable to take either a degree or a diploma course.

Part time students were admitted to nearly all the lectures: they represented a great variety of occupation. It is evident that the function of providing teaching for citizens of all ranks who wish to make their service to the community more effective, only waits development. There are at present various difficulties; in some classes there is no room: the lectures are usually given in the morning; it is very hard to add to the teaching hours of the staff whose time is not at our disposal and is heavily occupied elsewhere.

Library.

The number of books has been steadily increased owing to the generosity of the McCormick Estate: and the use of the books has notably increased. The privilege of the library is extended to Alumni, social workers, and interested people under guarantee, and so far as the use by students permits. Brief reference must be made to the increasing enquiries for book lists, for guidance in study, or in practical work: a valuable item in our service and though rather a heavy demand on our staff, one very willingly given. It will be necessary next year to extend the library by adding to it the present office of the Field Work Director. There has been also a considerable increase of clerical work, and I wish to make special acknowledgment of the devoted service of Miss Anderson as secretary and librarian. Other thanks are due for the thoughtfulness of those friends, and the class of '21, who have made welcome gifts of books; and for the loan collection of pictures with which Professor Mavor has added charm and interest to our pleasant building. An even greater gift is the enthusiastic loyalty of the Alumni, which gives the Department the most welcome help and encouragement.

Special Courses.

1. A full course for Y. M. C. A. boys' workers, offered in co-operation with the National Boys' Work Board. Part of the work was taken in Victoria College, and the practice work in the Y.M.C.A. The course was in charge of Dr. Hayward, and will lead to a second year next session. The entrance qualifications proved a difficulty here also, and it is expected that a four year course of the type just described, will be officially adopted by the Y. M. C. A., and possibly by other bodies.

2. The Medical Social Course was modified, in order to show the perspective of medical in relation to general social work. Of the 25 lectures, 8 were given by the Director and 2 by Mr. Stapleford, the remainder by experts in various aspects of Public Health Nursing. The course was in charge of Miss Emory, and the work done very satisfactory.

3. A short course was given for the Neighborhood Workers' Association and Big Sister Association combined, on child welfare and family problems—12 lecturers taking the various aspects of which they had special knowledge.

4. The same method was adopted in the short course given by the Canadian National Council for Combating Venereal Disease on the moral, psychological, medical and educational aspects of social hygiene. Both courses were attended by audiences that strained the capacity of the large lecture hall to the limit.

5. The Director gave a course of fifteen lectures to the staff of the Y. M. C. A. Headquarters.

The increased number of classes, owing to the addition of a second year, and the increased size and use of the library has compelled us to restrict the use of the building by other agencies. But we have been able to offer some hospitality to the new Department of Public Health Nursing, which has proved a very natural and pleasant co-operation.

Public Lectures were given by the following visitors:— C. C. Carstens (who was brought to Toronto by the Child Welfare Council); J. H. T. Falk of Montreal, and E. T. Devine of New York. The lectures were appreciated and the audiences were large.

The Director has given a large number of public addresses and done an increasing amount of work for committees, and Miss McGregor has devoted much time and energy to building up, by personal and committee work with the co-operating agencies, the foundation of field work.

Practically every graduate of the Department is employed and many of this year's class leave to take up posts. For the best kind of worker, combining personality, education, experience, and trained ability, there is still more demand than supply. This will be met in course of time from the students who follow the two year Diploma course (especially from those who have good previous education and experience). But it must be realized that for many students it is very hard, or impossible, to spare an extra year; some of those who would most have profited have been compelled to go out and earn. I hope the next chapter of our history will see the foundation of scholarships, or benefaction worthy to succeed that of Mrs. Warren, which made the Department possible, and of the McCormick fund which is endowing it with a library.

(11) REPORT OF THE DIRECTOR OF UNIVERSITY EXTENSION AND PUBLICITY.

(W. J. DUNLOP, ESQ.)

University Publicity.

It is almost impossible to distinguish between publicity and extension work. The extension courses bring the University the very best of publicity, and the publicity work results in increased requests for extension work. Five specific means of publicity have been used:

(a) *Bulletins*:—

The following have been issued and distributed during the year:—

- (1) 15,000 copies of an eight-page booklet on extension courses for teachers;
- (2) 1,000 copies of a large four-page bulletin on special benefactions;
- (3) 4,000 copies of a large four-page bulletin on the work of the anti-toxin laboratories, the Department of Social Service, the course in Commerce, and University Extension;
- (4) 10,000 copies of an illustrated booklet containing a synopsis of the President's statement to the Royal Commission on University Finances:

- (5) 3,500 copies of an eight-page booklet, illustrated, on Special Winter Course, for distribution to U. F. O. Clubs;
- (6) 15,000 copies of a sixteen-page Summer Session calendar for teachers;
- (7) 3,000 copies of an eight-page pamphlet giving a list of extension lectures;
- (8) 1,000 copies of a four-page folder regarding outside classes under the new arrangement approved by the Senate;
- (9) 5,000 copies of a sixteen-page booklet, "Opportunities for Graduates in Science," prepared by the staff in Science of the Faculty of Arts;
- (10) 5,000 four-page folders regarding the Special Winter Course for farmers and 2,500 four-page folders on the Short Course in Journalism.

(b) *Meetings: addresses—*

In co-operation with the Alumni Association and with the very effective assistance of Professor C. H. C. Wright, local alumni associations were visited, re-organized, and meetings addressed. The principal places visited were:— Stratford, Niagara Falls, Welland, Brantford, Kitchener, Bradford, Ottawa, Hamilton, St. Catharines, Cornwall, Napanee, Belleville, Trenton, Oshawa, Port Hope, Cobourg, Brockville, Pembroke, Smith's Falls, Bowmanville, Dunnville, Simcoe, Galt, Guelph, Windsor, St. Thomas, Woodstock, Exeter, Harriston, Collingwood, Waterford, Chatham, Sarnia, Windsor, and Elora. Meetings were not possible in all of these places but good publicity work was done in each of them. Addresses were given by Sir Robert Falconer, General Mitchell, Professors Gillespie, McLennan, C. H. C. Wright, G. M. Wrong and I. H. Cameron, Mr C. E. Macdonald, and the Director.

(c) *News Items, Articles, Letters,—*

- (1) Through the kindness of Mr. C. Leslie Wilson, B. A., of the Wilson Publishing Co., an item on the University, its work and its needs, appears every week throughout the year on one of the inside pages of some two hundred country newspapers (printed in part by that firm). This item is supplied by the Director.
- (2) Articles and news items have been supplied almost daily during the session to the reporters of the daily newspapers of Toronto.
- (3) Articles and letters have been supplied occasionally to the Farmers' Sun.
- (4) Almost every week a short news item has been sent to every newspaper in Ontario.
- (5) Articles and news items have been supplied also to the University Monthly.

(d) *Advertising,—*

Various lectures, classes, and courses have been advertised in the daily papers with excellent results. The policy has been followed of advertising for any Department of the University any lectures, courses, or special activities, that may be arranged. For example, the conference on Physics, the Household Science special course on "Diet for Health,"

the special lectures of the Department of Social Service. When all the University's advertising is concentrated in one office, it is possible to secure much more favourable advertising rates.

(e) *Exhibit at Canadian National Exhibitions—*

In March an offer of space was made by the authorities of the Canadian National Exhibition. This offer was gratefully accepted, and arrangements are well under way to put on an exhibit at this year's Exhibition. The space allotted has been divided among the Departments of Physics, Hygiene, Astronomy, Botany, Anatomy, University Extension, and the Faculty of Applied Science.

With the assistance of the Superintendent, parties of visitors have been conducted through the University buildings. The largest of these parties was one composed of one hundred and twenty-five young men and women from the county of Peel; they learned much that was a revelation to them.

The experience of this year has shown that the people of Ontario are anxious to learn more of the activities of the Provincial University which they rightly and naturally regard as their own property.

University Extension.

(a) *Summer Session:—*

The work offered in Arts in the Summer Session of 1920 comprised second year English, French, and Physics; Third year English, French, and Political Economy; Fourth Year English, Geology and Mineralogy. The total attendance in the work of all three years was 41. Now that the Teachers' Course has been definitely organized and various misunderstandings cleared up, a much larger attendance may be anticipated; indeed, the applications in hand on the last day of the University year indicate an increase of more than one hundred per cent in attendance for the Summer Session of 1921.

The subjects offered in the summer course for degrees in Pedagogy were Educational Administration and Educational Psychology. The attendance was 44, consisting chiefly of public school inspectors, normal school and secondary school teachers, and public school principals. Two students came from the United States, one from Alberta, one from Saskatchewan.

It should be noted that, while attendance of students from other Provinces is encouraged in the courses in Pedagogy because this is the only course of its kind attempted in Canada, the courses in Arts in the Summer Session and Teachers' Classes are restricted exclusively to students in the Province of Ontario.

(b) *Teachers' Classes:—*

For the benefit of teachers who live in Toronto or its vicinity lectures in subjects of the Teachers' Course are offered at 4.30 on certain afternoons and on Saturday forenoons. According to this scheme History, Psychology, and Science of the second year were given; History, French, and Science of the Third year; and History, Psychology, and Political Economy of the Fourth Year. Eleven public school teachers who had done all the work for the B. A. degree in this way graduated this spring. The total attendance at these Teachers' Classes during the session was 76.

In the courses in Pedagogy there are Teachers' Classes also. During the winter session Educational Administration, History of Education, and Educational Psychology were given. The number of students registered in the three subjects was 31.

(c) *Correspondence Courses:—*

While teachers within easy reach of the University are taking their work in Teachers' Classes, others who cannot attend are studying the same subjects by correspondence in preparation for the work of the Summer Session. Of these latter there were thirty-four in the Second Year and thirteen in the Third Year. To them 436 correspondence bulletins were sent and 374 exercises in answer to these bulletins were received from them.

The Extension Office also conducts correspondence courses for teachers in the subjects of the Middle School, the Upper School, and the commercial course. Teachers taking this work numbered 24, 68 and 26 respectively; bulletins sent them were 501, 832 and 356, and exercises received amounted to 161, 211 and 71. While these correspondence courses are intended to assist those who will take summer courses conducted by the Department of Education, it is also to be noted that many teachers taking Upper School subjects are in this way taking also the First Year of the Pass Course and purpose entering on the Second Year of the Teachers' Course in the near future.

(d) *Extension Lectures:—*

Single lectures and courses of lectures have been greatly in demand during this year. Courses, consisting of two or more lectures, have been given by members of the University staff in Petrolia, Hamilton, Ottawa, Tweed, Stratford, Bowmanville, Brampton, Huntsville, Brantford, Bancroft, Guelph, Orangeville, Collingwood and Welland, and single lectures have been given in Woodstock, St. Catharines, Fenwick, Orono, Toronto, Brooklin, Woodbridge, Beaverton, Listowel, Burgessville, Barrie, Watford, and Hillsburg. The total number of lectures was 53. Professors who are asked to deliver these lectures respond very heartily though the trips involve much time and some inconvenience.

(e) *Workers' Educational Association:—*

This voluntary organization of working men and women receives from the University the majority of its tutors and most of its funds. The Toronto W. E. A. conducted seven classes, in the tuition of which six members of the University staff participated and three instructors who do not belong to the staff. The enrolment in these classes was about 160. The Extension Office, with the assistance of members of the University staff, organized a W. E. A. in Hamilton with two classes in Economics. The Hamilton W. E. A. asks for four classes next winter and the members are very grateful for the assistance which the University renders their organization. The Ottawa W. E. A. has asked for three classes and arrangements have been made to comply with this request. The Trades and Labour Council of St. Catharines is considering the organization of a W. E. A.

All of these Workers' Educational Associations are independent each of the others and desire to remain so but all look to the University for support.

(f) *Tutorial Classes:—*

These are evening classes composed of persons who desire to improve their education but who are not looking for a certificate or a degree. Four such classes were conducted in Toronto and one in Streetsville. The latter was attended by young men and women belonging to the Junior Farmers' Institute and the Junior Women's Institute. The Agricultural representative in the County of Peel has asked for four such classes in that County next session.

(g) *Extra-mural Classes:—*

On the recommendation of the Committee on University Extension, the Council of the Faculty of Arts and the Senate approved a new scheme by which the work now done in the Teachers' Classes may be developed and extended so that persons in any locality in the Province may, under specific conditions, proceed to a degree by means of local evening classes. Already the Central Y. M. C. A. has begun to enrol students for this type of work and enquiries regarding it have come from Boards of Trade and other responsible organizations in Fort William, Hamilton, Sault Ste. Marie, Port Arthur, Stratford and Haileybury.

(h) *Special Winter Course for Farmers:—*

The Executive of the Canadian Weekly Newspapers Association short course of two weeks open to members of their Clubs, and others, and chose as their subjects Economics, Architecture, Public Health and Hygiene, English Literature, and Canadian History. This course was given from February 7th to 19th and was in every respect most successful. The attendance was 279; the enthusiasm of the students was extraordinary; the publicity given the course in the newspapers of the Province was most gratifying. In the type of subjects given this course is the first of its kind offered to farmers by any college or university in Canada. A similar course is offered for next year at the same time.

(i) *Short Course in Journalism:—*

The Executive of the Canadian Weekly Newspapers Association has asked for a week's course similar to that given the U. F. O. and this has been arranged for September 12th to 17th.

(j) The Department of University Extension co-operated with the Department of Household Science in advertising a free course on "Diet for Health," the attendance at which was so great that many people could not be accommodated. Another course on a more permanent basis has been arranged for next year. This office also assisted the Saturday Afternoon Lectures Committee in the season's work.

Everywhere throughout the Province there appears to be a remarkable demand for higher education and the Committee on University Extension is prepared to do everything that can be done to meet this demand. To be prepared to perform, as far as the size of its staff

and its finances will permit, any service that any section of the public may require is recognized as part of the duty of the Provincial University.

(12) REPORT OF THE DIRECTOR OF DEPARTMENT OF MILITARY STUDIES.

(COLONEL W. R. LANG).

I have the honour to report on this Department as follows:

1. The number in attendance—students in honour graduating departments and of the pass course—was 45, as compared with 15 in 1919-20, and many wishing to attend have been unable to do so owing to clashes with other subjects. In addition to these students of Military Studies as an Arts option, 47 others took practical work in the O.T.C. as an athletic option. A much increased number of applicants is indicated for next session.

2. In April eight candidates from the senior year took the optional examinations conducted by the War Office for O.T.C. certificates. The papers were those being written on by candidates throughout the Empire.

3. Proposals regarding further development of the courses are not included in this report, as these depend largely on certain changes at present under the consideration of the Medical and Science Faculties.

4. In September accommodation was provided for the department at 184 College Street. This has sufficed for the year's requirements. At my request the Militia Department kindly loaned tables, forms, chairs, maps and other instructional material.

One graduate generously sent a cheque which enabled 48 volumes to be purchased for a departmental library, and other volumes have been presented.

(13) REPORT OF THE PHYSICAL DIRECTOR.

(DR. J. W. BARTON).

(A)

The last year, 1920-1921, was the second year of compulsory physical examination of all students and compulsory physical training for the students of the first and second years. With the exception of a part of the students of the final years in Medicine and Dentistry the examinations were completed and revealed some interesting facts.

First, eighty per cent of our students were in Category "A" physically, that is fit for service anywhere, another ten per cent fit only for certain kinds of service overseas, and another ten per cent fit only for light clerical service in Canada.

Students were placed in Category "C" for the following reasons: asthma, small chest, loose cartilage, deformities, goitre, hernia, injuries, infantile paralysis, light weight, deficient muscular heart, organic heart disease, spinal curvature, round shoulders, and muscular tremor.

Students in Categories "A" and "B" were allowed to choose the form of exercise in which they wished to indulge, but the students in "C" took regular class work in the gymnasium two periods each week. The results of the regular class work upon these students below par are most satisfactory.

For instance, of the students of light weight ninety per cent increased, on the average, six pounds during the session, while the other ten per cent lost, on the average, two pounds each. As the average weight of these students was one hundred and eleven pounds in October, an average gain of six pounds is a good showing.

Likewise the students with "small chests" made a creditable showing, as they all, with but one exception, increased the girth of their chest an average of 1.15 inches. The average size of these small chests (anything below 35 inches expanded) was 33.7 inches. Thus by increasing their girth as above the average size was brought up to 34.8 inches, or very close to the 35 inches.

Similar improvement was noted in cases of round and uneven shoulders and poor posture.

In the rarer conditions there were six cases of goitre, of which one decreased in size, three remained stationary, and two showed an increase.

There were five cases with a history of tuberculosis, of which four showed an increase in weight and one remained the same.

The general result was such that thirty-three per cent improved sufficiently to leave Category "C" and be placed in Category "A" or "B."

The elective work such as boxing, fencing, wrestling, basketball and swimming crowded the five gymnasias and the swimming tank daily from 4 to 6 p.m.

As many as seven hundred students have used this equipment between the hours of 3 to 6 p.m.

The new arrangement of the University whereby provision on the various time tables has been made for morning hours for physical training will be a great boon to the general athletic work.

I believe a word in recognition of the work of our swimming instructor Mr. Winterburn, is due at this time. The actual number taught to swim last year was two hundred and twenty-three. This is a record for our work.

Of those able to swim there were one hundred and fifty-eight awards for Life Saving gained by our students, which I believe is another record. It should be a great source of satisfaction to the University to know that this important work, learning to swim, and learning the art of life saving, is receiving such attention and attaining such results.

Report of the Athletic Association.

In the various branches of athletics the season of 1920-1921 has been a memorable one in the University of Toronto. It is safe to say that in no previous year have so many championships come to the University.

In the Intercollegiate contests the Senior and Intermediate Rugby, the Senior Soccer, Harrier, Basketball, Hockey, the Gymnasium Contest, the Boxing, Fencing and Wrestling championships came to Varsity.

The Senior Rugby Club also played off for the Canadian Championship, represented by the Earl Grey Cup. The Senior Hockey Club won the John Ross Robertson Cup of the Ontario Hockey Association and the Allan Cup of the Canadian Amateur Hockey Association.

In rowing, Coach T. R. London's crew, many of whom had never sat in a boat before turning out for the University, won the Junior and Senior "Eights" at the Canadian Henley Regatta held at St. Catharines on Civic Holiday 1920.

The Interfaculty championships have been won as follows:

Rugby (Mulock Cup).....	Victoria
Track (Toronto Cricket Club Cup).....	S.P.S.
Soccer (Arts Faculty Cup).....	S.P.S.
Harrier (Brotherton Cup).....	Meds.
Hockey (Jennings Cup).....	Trinity
Basketball (Sifton Cup).....	Jr.U. C.

Boxing, Wrestling and Fencing (Davidson Cup).....	Dents.
Rowing	S.P.S.

(14) REPORT OF THE DIRECTOR OF THE CONNAUGHT ANTITOXIN
LABORATORIES. (DR. J. G. FITZGERALD).

Research Division:

The work in this Division of the Laboratories has been undertaken with a view of further increasing the knowledge of two subjects of very considerable interest. The first problem is of immediate practical importance and is an endeavour to ascertain the diagnostic and prognostic value of certain serological methods, in tuberculosis, when the results of these serological investigations are correlated with radiological, clinical and other observations. Repeated examinations of this character have been made and already most interesting results have been obtained. Dr. Caulfield and his associates, Dr. Hodge, Miss Cohen, Miss McLennan, Miss McMillan and Mrs. La Rush have devoted their attention to the various aspects of this work. An interesting bacteriological study in connection with this problem has also been conducted by Dr. Hodge and Miss Cohen.

The study of Dr. Caulfield and those associated with him, has been carried to the point where publication of results will soon be undertaken and a monograph on the subject will, it is expected, be prepared. This very fine combined laboratory and clinical investigation is the result of the co-operation of the Connaught Antitoxin Laboratories with the Department of Soldiers' Civil Re-establishment, originally undertaken to provide laboratory facilities of the very best type for the ex-service men of the C. E. F. suffering from pulmonary disease. This combined effort is being sustained and is under Dr. Caulfield's direction.

The other work undertaken by Dr. Cruikshank in these laboratories for the D. S. C. R. was discontinued when Dr. Cruikshank resigned to become Director of the Division of Laboratories of the Department of Public Health, Toronto. This work was of routine character, chiefly, and could well be carried on in the health diagnostic laboratories in Toronto and elsewhere.

The second problem at present being investigated in these laboratories is that of toxin production by bacteria. This is also a subject of much scientific interest. It has not hitherto, been approached, however, from a stand-point which to us, it has seemed, might yield significant results. The work at present is engaging the attention of Mr. Moloney and Miss Hanna and already substantial progress has been made. It is anticipated, however, that this study may require to be prosecuted for perhaps several years, before any of the more obscure features can be elucidated. Other problems, the investigation of which has been initiated by members of the Department but temporarily put aside on account of the pressure of routine work, will it is expected be further investigated during the coming academic year. The research work of members of the Departments of Hygiene and Preventive Medicine, as well as that of the members of the Research Division of the Connaught Antitoxin Laboratories is conducted in the latter because of the unusual facilities there provided.

Antitoxin Division:

The work of this Division under the immediate direction of Dr. R. D. Defries, Associate Director of the Laboratories, has expanded very greatly during the present year.

The demand for certain of the public health biological products, especially diphtheria antitoxin and smallpox vaccine has exceeded that of any previous year since the establishment of the Laboratories. The communities served have also increased in number and extent in 1920-1921.

As hitherto, all of the diphtheria antitoxin, smallpox vaccine and other products distributed free in Ontario, by the Provincial Board of Health of this Province, and in Saskatchewan by the Bureau of Public Health of that Province, have been obtained from these Laboratories. The Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island have also been supplied in large part. In addition the Cities of Edmonton, Calgary, Saskatoon, Winnipeg, Lethbridge, etc., have obtained antitoxin from the Connaught Antitoxin Laboratories. Druggists in the Provinces of British Columbia, Quebec, Manitoba, Nova Scotia and Prince Edward Island have also been supplied. The Colony of Newfoundland has obtained large quantities of different products during the year.

Other parts of the British Empire, notably, New Zealand, British West Indies and British Honduras have also obtained sera on various occasions during the present year. For the first time, products have been shipped to a City in the United States during the last six months, for use in the local health department there. China, too, is now included in the list of countries to which antitoxin has been sent during 1920-1921.

The Laboratories and University Farm were visited during the year by an Officer of the United States Public Health Service and inspected in accordance with the terms of the license held by the laboratories, and issued by the Treasury Department of the United States permitting the Connaught Antitoxin Laboratories to engage in interstate commerce in the United States public health biological products.

An approximate idea of the growth of a part of the routine work will be seen by reference to the following table indicating the output of diphtheria antitoxin for the years 1916, 1917, 1918, 1919, 1920 and 1921.

Year	Diphtheria Antitoxin Units	Diphtheria Plasma Concentrated Litres.
1916	218,626,000	
1917	304,576,000	1,425
1918	275,015,000	1,718
1919	375,215,000	2,263
1920	432,236,000	2,331
1921	496,912,000	3,847

The quantity of smallpox vaccine distributed in 1920 was 535 580 capillary tubes.

The increase in production of diphtheria antitoxin during the year has amounted to seventy per cent. over 1919-1920.

The products at present being prepared and distributed are:—diphtheria and tetanus antitoxin, anti-meningitis serum, type 1, anti-pneumococcus serum, normal horse serum, smallpox vaccine, anti-rabies vaccine (Pasteur Treatment) and anti-typhoid vaccine.

The Connaught Antitoxin Laboratories Research Fund, has been definitely recognized as a trust fund during the current year and the income on this is available for the support of research in preventive medicine, in addition to grants from other sources.

From the surplus on operating of the Antitoxin Division of the Connaught Antitoxin Laboratories for 1920-1921, a sum of money has been set aside for the purpose of promoting health education among students in various faculties in the University for a two year period. To do this a special Lecturer in Health Education (Dr. George D. Porter) has been appointed. He will direct and supervise a thorough investigation into the health conditions existing among incoming male students and will also deliver courses of lectures on elementary personal and public hygiene to students in the different faculties. This health educational work will probably be extended to include work under the auspices of the Department of University Extension.

It is hoped that as a result of this investigation and demonstration that the creation of a Department of University Health Service may be undertaken. The promotion of sound health habits should be the first result of this effort. Even more important, however, would be the creation of a sound public opinion, among undergraduates of the University, on questions relating to public health and hygiene. Later, they in turn can do much to stimulate interest in their own communities, in problems of hygiene and sanitation which may require solution. Until the public generally is educated further in hygiene and sanitation, improvements in the general health are likely to be retarded. It is especially important therefore, that a proper knowledge be inculcated into those who in many instances are destined to take leading parts in the affairs of this Dominion.

The loyal and enthusiastic co-operation of all members of both Divisions of these laboratories is gratefully acknowledged.

(15) REPORT OF THE DEPARTMENT OF PUBLIC HEALTH NURSING.

(MISS E. KATHLEEN RUSSELL).

I beg to submit the following report from this Department for the year ending June 30, 1921.

When the Department of Public Health Nursing issued its first announcement in July, 1920, considerable interest was manifested by the nurses in Ontario and elsewhere, and we were able to select a full class of 50 students, from a list of about 80 applicants. Of this class of fifty, 47 received Diplomas.

The curriculum has presented problems which only experience will solve. We have a certain type of worker to prepare, namely the Public Health Nurse, but that is a rather general term which to different Public Health administrators suggest various forms of service. We are asked to give these students in a one year course, the training and general viewpoint which will enable each to adapt herself later to any branch of this work. It is only possible to attempt this for women who are already graduate nurses.

It has been comparatively easy to obtain the lecture courses desired for this class. The University has a rich store from which to draw. That fact seems to justify the establishment of this new Department in the University.

The health organizations of the City of Toronto constitute the laboratory in which these students must receive their practical training. The difficulties of planning and controlling such work are evident, but, nevertheless, we felt that

satisfactory results were obtained. We are deeply indebted to the public health organizations of the city for that training freely given to our students.

The Red Cross Society has generously met the entire cost of the year's work, and we have the promise of their financial assistance for two more years, so that the University may have time to make plans for the future support of the Department.

It is already evident that we are preparing a type of worker that is really wanted in the community, for we are receiving many demands for the services of these first graduates. These enquiries are coming from all over Canada.

(16) STATEMENT REGARDING THE BIOLOGICAL MUSEUM.

(PROFESSOR B. A. BENSLEY)

The following donations have been received for the Biological Museum and for the Royal Ontario Museum of Zoology:—

A collection of shells from Mr. J. J. Freeborn, Dundas, Ontario.

Specimens of antelope horns, presented by Mrs. Davids, Toronto.

A collection of 133 mounted birds, property of the late Dr. T. H. Thornton, Consecan, Ont.; presented by Dr. F. B. Thornton, Toronto, and Mrs I. H. Woods, Petrolea.

A grey seal from Mrs. Turry, Toronto.

A young whistling swan from Mr. G. L. Vivian, Toronto.

An American bittern from Mr. Ernest Purvey, Toronto.

Specimens of pheasants, young peafowl and weasel, presented by Mr. G. H. Corsan, University of Toronto.

A flying squirrel from Mr. J. T. Burnham, Toronto.

A large number of specimens, chiefly birds, including a male ostrich, presented by the City of Toronto Parks Departments.

The following specimens have been received as loans:—

A passenger pigeon from Mr. Paul Hahn, Toronto.

A collection of mounted birds and mammal trophies from Dr. H. H. Moorhouse, Toronto.

There has been received by purchase at a nominal figure the extensive collection of insects belonging to Dr. C. J. S. Bethune, late of Ontario Agricultural College, Guelph.

(17) STATEMENT REGARDING THE MUSEUM OF GEOLOGY. (Professor A. P. COLEMAN).

Besides the acquisition of material as listed below there is nothing worthy of especial mention except the installation of a new wall-case. Professor Parks spent three weeks of the summer of 1920 on a collecting trip to the iron and copper regions of Michigan.

The chief acquisitions during the year are as follows:—

By Donation:

Lava, sulphur, Pele's hair from Mt. Kilauea, Hawaii.—W. Covert, Esq., Toronto.

Sphalerite from Joplin, Missouri.—Professor Guess.

Copper Ores from Japan.—Kenzo Ikeda, Japan, per Dr. W. G. Miller.

Post-glacial volcanic ash, Minto, Yukon.—Professor Walker.

Nigerian tin.—G. T. Halloway, Esq., London.

Calcite concretionary on roots, France.—A. L. Benness, Esq., Swansea.

Semi-anthracite, Alberta.—Mr. Reeve, per Professor MacLean.

Calcite, apatite and mica.—Mrs. R. Galley, Toronto.

Travertine, Moore Park ravine.—Mr. Arthur Jennings, Toronto.

Large series of nickel and copper products.—Mond Nickel Company.

Series of asbestos products.—Consolidated Asbestos Company, Montreal,
per Professor Walker.

By Purchase:

Samarskite, North Carolina; Quartz sphere, Japan.—Dr. W. F. Ferrier.

By Collection:

Complete series of copper ores and related rocks, Keweenaw Point, Michigan.
—Professor Parks.

Complete series of ores, rocks, etc, of the Marquette Iron Range, Michigan
—Professor Parks.

(18) STATEMENT REGARDING THE MUSEUM OF PALAEOLOGY. (PRO-
FESSOR W. A. PARKS).

During the winter the head and part of the trunk and limbs of a very fine specimen of *Centrosaurus apertus* have been prepared and mounted in the gallery. Much of the work of preparation has also been done on the head and skeleton of a remarkable new genus and species of dinosaur obtained by the "Research" expedition of 1920.

During the summer and autumn of 1920 very large collections of local fossils were made and much material obtained by donation and purchase has been added to the gallery.

By Donation:

The chief acquisitions during the year are as follows:—

Tertiary fossils from Peru.—J. V. Culbert, Esq.

Type fossils from Idaho, Wyoming, and Utah.—Dr. W. F. Ferrier, Toronto.

Mastodon bone, Florida.—Mrs. C. E. Humberstone, Toronto.

Fossil corals, Lake of the Woods.—A. K. Shives, Esq., per Professor Thomson.

Carboniferous fossils, Nova Scotia.—A. K. Shives, Esq., per Professor Thomson.

Trenton Bryozoa, Montreal.—Professor Thomson.

Megalomus canadensis, Galt, Ontario.—J. Capling, Esq.

Actinoceras sp.—Mr. Wallbridge.

Fossils from France.—A. L. Benness, Esq., Swansea.

Fossils from the Triassic of Peace river.—A. H. Bell, B.A.

Fossils from the Devonian of Great Slave lake.—P. S. Warren, B.A.

By Collection:

Local fossils, Toronto.—Professor Parks and assistants.

Dinosaur remains, Red Deer river, Alberta.—Professor Parks.

Fossils from British Columbia.—Professor Coleman.

By Purchase:

Type specimen of *Lissopriion ferrieri*.—Dr. W. F. Ferrier, Toronto.

Palaeozoic invertebrates.—Ward's Natural Science Establishment, Rochester,
N. Y.

(19) STATEMENT REGARDING THE MINERALOGICAL MUSEUM.

(PROFESSOR T. L. WALKER).

During the year the collections of the University and of the Royal Ontario Museum of Mineralogy have been materially enriched by numerous donations and exchanges as well as by the personal field work of the staff.

The outstanding presentation is due to the generosity of Hon. Senator M.J. O'Brien, Renfrew, Ontario, who gave one of the rich specimens from the Miller Lake-O'Brien mine of Gowganda, Ontario, showing a vein twenty-two inches wide richly impregnated with silver in the smaltite gangue. This specimen now occupies a case in a prominent position where all visitors may gather an idea of the character of the ore in the Gowganda district.

A valuable collection of Brazilian minerals was presented by the Geological Survey of Brazil.

An unusually fine collection of Swedish minerals was received in exchange from the Riksanuseets Mineralogiska Afdelning, Stockholm. In this collection are exceptionally fine samples of some of the rarer Swedish minerals.

Several gaps in the systematic collection were filled by an exchange with the British Museum.

With a view to furthering exchange it has for several years been the policy of the Museum, as opportunity offered, to secure large quantities of typical Canadian minerals, principally through the efforts of the members of the University and Museum staff. As a result of this policy many minerals which were not represented in the collection have been obtained in exchange and for completeness the collection compares favorably with the prominent museums not only on this continent but in Europe.

APPENDIX B

- (1) Enrolment in the Colleges.
- (2) Enrolment in University subjects.
- (3) Registration in Courses in the Faculty of Arts.
- (4) Registration for Graduate Courses.

(1) ENROLMENT IN THE COLLEGES.

The students in University College were enrolled as follows:

—	Greek.	Latin.	Ancient History.	English.	German.	French.	Oriental.	Ethics.
First Year—								
Pass.....	15	305	128	369	78	298	108	
Honours.....	10	21	33	96	20	85		
Second Year:								
Pass.....	9	38		235	9	162	79	
Honours.....	7	6	39	53	8	41	4	
Third Year—								
Pass.....	3	7	3	115	8	64	38	46
Honours.....	10	11	8	38	2	26	1	
Fourth Year—

Architecture	6	3		
Analytical and Applied Chemistry	6	8		
Chemical Engineering	3	7	1	
Electrical Engineering	8	15	2	
Metallurgical Engineering	1	2		

(4) FACULTY OF FORESTRY.

	Passed.	Honours. Deferred.	Failed.
First Year.....	6	7	7
Second Year.....	1	10	6
Third Year.....	7	3
Fourth Year.....	5
Fifth Year.....
Sixth Year.....	1
Special Student.....	1

(5) FACULTY OF EDUCATION.

	Passed.	Failed.
*High School Assistants' Course.....	72
Specialists' Course.....	47
First Class Public School Course.....	31
Elementary Art Course.....	24
Elementary Physical Culture Course.....	46
One Year Household Science Course.....	15
Bachelor of Pedagogy Course.....	4
Bachelor of Pedagogy Course (passed in part).....	7
Doctor of Pedagogy Course (passed in part).....	38
Number who failed in whole or part.....	25

(6) FACULTY OF MUSIC.

	Passed.	Starred.	Failed.
Bachelor of Music:			
First Year.....	6	1
Second Year.....	1	1
Third Year.....	3
Local Examinations.....	7 553	4	1 60

* Many of these are included among those who passed or failed in the other courses in this list.

APPENDIX D

GEOGRAPHICAL DISTRIBUTION OF STUDENTS

The geographical distribution of students is as follows:—

FACULTY OF ARTS

	University of Toronto	University College.	Victoria College.	Trinity College.	St. Michael's College.	Total
Ontario: (1) Province.....	34	559	310	93	104	1,100

APPENDIX E.

PUBLICATIONS BY MEMBERS OF THE STAFF.

FACULTY OF ARTS.

Department of Archaeology.

- Harcum, Miss C. G.—“Roman Cooking Utensils in the Royal Ontario Museum of Archaeology.” (*American Journal of Archaeology*, Vol. XXV, No. 1, January-March, 1921.)

Department of Biology.

- Clemens, W. A., with Clemens, Lucy S.—“Contribution to the Biology of the Muttonfish, *Zoarces anguillaris*.” (*Contributions to Canadian Biology*, Ottawa (69).)
- Huntsman, A. G.—“Age-determination, growth and symmetry in the test of the Ascidian, *Chelyosoma*.” (*Transactions Royal Canadian Institute*, Vol. XIII.)
- “The standardization of the names of fishes and other marine products.” (*Canadian Fisherman*, Vol. VII.)
- “International Investigation of the ocean.” (*Canadian Fisherman*, Vol. VII.)
- Leim, A. H.—“A new species of *Spirontocaris* with notes on other species from the Atlantic Coast.” (*Transactions Royal Canadian Institute*, Vol. XIII.)
- MacArthur, J. W.—“Changes in Acid and Alkali Tolerance with Age in Planarians. With a Note on Catalase Content.” (*American Journal of Physiology*, Vol. 54; pp. 138-145. Nov. 1920.)
- Walker, E. M.—“*Wohlfahrtia* Vigil (Walker) as a Human Parasite.” (*Journal of Parasitology*, Vol. VII, pp. 1-7, 1920, (pl. I)
- “The Life Cycle of the Orthopteroid Orders. (Part 2 of a Symposium on the Life Cycle in Insects)” (*Annals Entomological Society of America*, Vol. XIII, No. 2, 1920, pp. 137-141.)
- “Orthoptera Collected in the Canadian Arctic.” (*Rept. of the Can. Arctic Expedition, 1913-18*, Vol. III. Insects. Part J: Orthoptera, 1920, pp. 3J-4J.)

Department of Botany.

- Baker, Miss L. V.—“Vestigial Centripetal Xylem and Transfusion Tissue in the Leaf of *Pinus Strobus*. 19 Text Figures.” (*Transactions of the Royal Society of Canada*, Vol. XIV.)
- Brown, H. P.—“Report of the Fertilizing Value of Activated Sludge.” (*Annual Report of the Provincial Board of Health for Ontario*, 1920.)
- Faull, J. H.—“Additional Notes on the Needle Blight of the White Pine.” (*Report of Minister of Lands and Forests, of the Province of Ontario*, 1920.)
- “Winter Browning of Coniferous Foliage in 1920.” (*Report of Minister of Lands and Forests, of the Province of Ontario*, 1920.)
- “Some Diseases of Pulpwood Trees of the Temagami Forest Reserve—including preliminary notes on (a) “Red Branch” of Balsam; (b) A Twig Blight of Balsam; (c) Canker of Poplar.” (*Report of Minister of Lands and Forests, of the Province of Ontario*, 1920.)

- "Plant Pathology; its Status and its Outlook." (Transactions of the Royal Society of Canada. Vol. XIV, 1921.)
- Sifton, H. B.—"The Seeds of Poisonous Weeds in Concentrated Feeds." (Canadian Veterinary Record, November, 1920.)
- "Some Characters of Xylem Tissue in Cycads." (Botanical Gazette, December, 1920.)
- "Canadian Plants Injurious in Hay and Coarse Feeds." (Canadian Veterinary Record, March, 1921.)
- "Longevity of the Seeds of Cereals, Clovers and Timothy." (American Journal of Botany, June, 1920.)

Department of English.

- Horning, L. E., with Jones, G. M. and Morrow, J. D.—"A High School English Grammar."
- Bush, Douglas—"A Note on Beowulf 1600-1605." (Modern Language Notes April, 1921.)
- "On Hobbies." (Canadian Forum, March, 1921.)
- "Celebrities in Transit." (Canadian Forum, April, 1921.)
- "Review of Knut Hamsun's Hunger." (Canadian Forum, April, 1921.)

Department of French.

- Squair, John—"The New Fraser and Squair Complete French Grammar." (Revision of 1901 edition.) Exercises to Part I by A. Coleman, University of Chicago. (D. C. Heath & Co., Boston.)
- "John Seath and the School System of Ontario." (University Press.)
- "Statism and Individualism." (Canada First League, January, 1920.)
- "David Willson of Sharon 1778-1866." (Transaction No. 20. The Women's Canadian Historical Society.)

Department of History.

- Flenley, R.—"Outline of the History of British Artillery to 1815." (Reprint of articles from Journal of Royal Artillery, 1920-21.)
- Kennedy, W. P. M.—"Nationalism and Self Determination." (Canadian Historical Review, March, 1921.)
- "The Nature of Canadian Federalism." (Canadian Historical Review, May, 1921.)
- Williams, R. Hodder—"The Literature of the Peace Conference." (Canadian Historical Review, June, 1921.)

Department of Italian and Spanish.

- Goggio, E.—"Relazioni Letterarie fra Italia e Stati Uniti." (Il Carroccio. Vol. XIII, No. 2. August, 1920.)
- "Margaret Fuller Ossoli and the Roman Republic." (Il Carroccio. Vol. XIII, No. 1. January, 1921.)
- "American Sympathy for Italy's Wars of Independence." (Il Carroccio. Vol. XIII, No. 4. April, 1921.)
- Pijoan, J.—"Antique Marbles in the Collection of the Hispanic Society of America. New York."

Department of Mathematics.

- Fields, J. C.—"Universities Research and Brain Waste." (Transactions Royal Canadian Institute, Vol. XIII, Part 1.)

Department of Mineralogy.

- Walker, T. L.—“Cosalite from Ontario.” (University Studies.)
 “Dyscrasite from Cobalt, Ontario.” (University Studies.)
 “Epsomite Lakes near Ashcroft, B.C.” (University Studies.)
 “Orthoclase from Penticton, B.C.” (University Studies.)
 “Ulexite from the Maritime Provinces.” (University Studies.)
 “A Chemical Study of Conglomerates.” (University Studies.)
- Walker, T. L. with Parsons, A. L.—“Rammelsbergite from Cobalt, Ontario.” (University Studies.)
 “The Dehydration of Spencerite.” (University Studies.)
- Walker, T. L. with Thomson, E.—“An Examination of Lillianite and Galenobismutite.” (University Studies.)
- Parsons, A. L.—“Calcite from Shangoinah Island near Thunder Cape, Lake Superior.” (University Studies.)
 “Economic Deposits in Thunder Bay District.” (Ontario Department of Mines, Vol. XXX., 1921.)
- Parsons, A. L. with Thomson, E.—“Animikite and Macfarlanite from Silver Islet, Thunder Bay, Lake Superior.” (University Studies.)
- Thomson, E.—“A Mineralographic Study of the Pyrite Group.” (University Studies.)
 “District between Hawk Junction and Wanda on the A.C.R.” (Summary Report C.G.S. 1921.)
- Todd, E. W.—“Notes on the Analysis of Lead-Bismuth Minerals.” (University Studies.)
- Gledhill, T. L.—“Iridosmine Crystals from Ruby Creek, Atlin, B.C.” (University Studies.)

Department of Philosophy.

- Bott, E. A.—“A Point of View.” (University of Toronto Studies.)
 “Juvenile Employment in Relation to Public Schools and Industries in Toronto.” (University of Toronto Studies.)
- De Wulf, M.—“L'Œuvre d'Art et la Beauté.”
- Tracy, F.—“The Psychology of Adolescence.” (The Macmillan Company, New York.)

Department of Political Economy.

SUPERINTENDENT'S REPORT

Buildings.

This year, the University has had two buildings in course of erection. The new Electrical Building, while not finally completed, was largely used by the Departments of Electrical Engineering and Applied Mechanics after January 1st, 1921. The Superintendent's department did the plumbing, heating, electric wiring and furnishings in this building, our contracts approximating \$75,000.00.

The new Press Building, started June 7th, 1920, was occupied by the Press and Students' Book Department in late September 1920. This department did the plumbing, heating and electric wiring in this building, involving approximately \$9,000.00.

In April the old house at No. 2 Surrey Place was torn down to make way for a Reception Hospital to be built by the City.

With the removal of the Departments of Electrical Engineering and Applied Mechanics from the Engineering Building, a general rearrangement of space in this building was necessary. These changes were made and the building repaired and renovated at a cost of \$15,000.00.

The Superintendent's department now has under its supervision a total of thirty-two buildings.

Grounds.

The front lawn has been restored but it has been decided not to touch the back lawn although it is in very bad shape until such time as prospective buildings in its vicinity are erected. The University roads, with the large increase in motor traffic have become a serious problem. These roads were not built for present traffic requirements and, in spite of continual repair, will not stand up. They are also too narrow for the increased traffic. The University will have to consider the building of more permanent and wider roads with curbs to protect the lawn margins.

Workshops.

The amount of work done by our staff of tradesmen has increased until, for the year ending June 30th, 1921, it amounted to approximately \$225,000.00. The average number of tradesmen employed, plumbers, carpenters, steamfitters, electricians and painters was 67, while in June, the maximum number reached 94. This work is done under the handicap of an inadequate building designed for a power plant and not for workshops.

The total number of employees operating under the supervision of this office averaged 172 with a maximum number of 204 in June.

Central Plant.

The question of fuel supply this year has been most difficult. During the summer and autumn coal was exceedingly scarce and very high in price. As we must, to ensure continuous operation, store a large part of our burning before the heating season begins, we, with other consumers, had to buy coal at greatly increased prices. This condition lasted until early December, when the situation broke and the price of coal was much easier. The effect of this high priced coal is noted in our operation charges. While the weather was exceptionally mild, 6.5° above the average, and we only burned 8,458 tons, as against 9,359 tons the previous year, the total cost of operation rose from \$84,701.00 to \$147,000.00, due largely to

AUDITOR'S REPORT.

TORONTO, 27th October, 1921.

To the Governors of the University of Toronto:

Gentlemen:—

Herewith I present the Financial Statement of the University for the fiscal year ending 30th June, 1921, and beg to report that all the transactions of the year upon Revenue Account and Capital Account have been duly audited and approved of.

Yours faithfully,

(Sgd.) G. T. CLARKSON.

Auditor.

FINANCIAL STATEMENT

APPENDIX I.

BALANCE SHEET, 30TH JUNE, 1921.

Funds and Liabilities.

SCHEDULE 1.

General Endowments Fund.

Additions for 1920-21:

Electrical Engineering Building.		
Grant for construction received from the Legislature ..	\$350,000 00	
Convocation Hall Advance:		
Restoration from proceeds of Wild Lands Sales, fifteenth instalment ..		1,251 06
Annuity debentures:		
Portion of 1920-21 instalments reducing principal:		
Twelfth instalment, issue of July, 1909	\$8,099 68	
Tenth instalment, issue of January, 1911 ..	1,950 00	
Tenth instalment, issue of January, 1911 ..	4,501 00	
Sixth instalment, issue of April, 1915	1,280 17	
		\$15,830 83
Increased valuation of University Park lease upon renewal Part Lots 55 and 56	\$10,800 00	
Building No. 6 Queen's Park, further payment upon purchase	468 67	
Building No. 100 Queen's Park, third of ten instalments paid on purchase		720 00
Building No. 8 Queen's Park, sixth of ten instalments paid on purchase		750 00
Building No. 184 College Street, fifth of ten instalments paid on purchase		500 00
Library proper:		
Additions for year, less depreciation (Schedule 7)	14,954 85	
Gymnasium Equipment:		
Additions for year (\$7,620 19, less old equipment written off, \$1,800)		5,820 19
		\$401,095 60

Contra.

Amount of account carried for No. 2 Surrey Place as a proposed Botanical building now written off, as house demolished to make room for Psychiatric Hospital (\$13,000 less sundry credits, \$1,717.30)	\$11,282 70
---	-------------

Central Power Plant, repayments from Revenue to 1920 inclusive written off asset account	\$163,759 57	\$175,042 27
		<u>\$226,053 33</u>
Return of 30th June, 1920		6,110,411 66
Return of 30th June, 1921		<u>\$6,336,464 99</u>

Note: This statement does not include any assets or liabilities of the Toronto Conservatory of Music.

SCHEDULE 2.

Specific Endowment Funds (Scholarships, Prizes, etc.).

I. ADMINISTRATION.

I. *Salaries.*

President's Office.

Sir Robert Falconer, K.C.M.G., President, 12 mos. to 30 June (with free house, heat and light)	\$10,000 00	
Miss A. W. Patterson, President's Secretary, 12 mos. to 30 June (paid also \$200 as Secretary, Faculty of Music)	2,000 00	
		<u>\$12,000 00</u>

Bursar's Office.

F. A. Mouré, Bursar, 12 mos. to 30 June (paid also \$250 in Music)	\$5,250 00	
Accounts Branch:		
C. E. Higginbottom, Accountant, 12 mos. to 30 June	2,400 00	
J. P. Jones, Appropriations Ledger Clerk, 12 mos. to 30 June	1,500 00	
Miss M. Smyth, Voucher Clerk, etc., 12 mos. to 30 June	1,200 00	
Miss J. H. Branton, Clerk, 12 mos. to 30 June	1,100 00	
Miss E. Long, Typist, etc., 12 mos. to 30 June	900 00	
Fees Branch:		
H. J. Bolitho, Fees Clerk, 12 mos. to 30 June	2,200 00	
Record Clerks, each 12 mos. to 30 June:		
Miss E. B. Goodwin	1,400 00	
Miss E. Grew	900 00	
Secretarial Branch:		
Miss A. M. Gall, Chief Clerk, 12 mos. to 30 June	1,800 00	
Miss M. Pyper, Assistant, 12 mos. to 30 June	1,000 00	
Miss M. Burns, Stenographer, 11 mos. to 30 June, @ \$1,000 per annum	916 67	
		<u>\$20,566 67</u>

Registrar's Office.

James Brebner, Registrar, 12 mos. to 30 June	5,000 00
A. B. Fennell, Assistant Registrar, 12 mos. to 30 June	3,100 00
A. T. Laidlaw, Assistant, 12 mos. to 30 June	2,500 00
H. J. Strong, Assistant, 22 Sept. to 30 June @ \$1,500 per annum	1,162 50
Miss E. Hargreaves, Desk Assistant, 12 mos. to 30 June	1,300 00
Miss N. MacKenzie, Minute Clerk (including services as secretary to Graduate Board) 12 mos. to 30 June	1,500 00
Clerks, each 12 mos. to 30 June:	
Miss M. McMillan	1,375 00
Miss A. S. Meen	1,375 00
Stenographers, each 12 mos. to 30 June:	
Miss E. M. Sharpe	1,250 00
Miss J. R. White	1,250 00
Miss E. M. Fasken	800 00
Register Clerks:	
Miss E. Keys, 12 mos. to 30 June	1,125 00
Miss A. MacGillivray, 6 mos. from 1 January @ \$1,300 per annum (transferred from Roll of Service)	650 00

1. *Salaries.—Continued.*

Miss F. Hahn, 5 mos. to 30 June @ \$60 per month	\$300 00	
Miss Alice Dunnett, Filing Clerk, 12 mos. to 30 June	900 00	
	<hr/>	\$23,587 50

Superintendent's Office.

A. D. LePan, Superintendent of Buildings and Grounds, 12 months to 30 June	\$4,800 00	
W. H. Bonus, Assistant Superintendent, 12 months to 30 June	2,500 00	
W. L. D. Carnie, Chief Clerk, 12 months to 30 June	1,600 00	
Miss J. Bell, Clerk, 12 months to 30 June	1,200 00	
Miss M. Edgar, Stenographer, 12 months to 30 June	1,200 00	
	<hr/>	\$11,300 00

Library.

H. H. Langton, Librarian, 12 months to 30 June (paid also \$200 as Editor, University Studies)	\$5,000 00	
W. S. Wallace, Assistant Librarian, 12 months to 30 June (paid also \$1,000 in History)	2,500 00	
Assistants, each 12 months to 30 June:		
Miss G. Buchan	1,800 00	
Miss H. Young	1,800 00	
Miss L. M. Mason	1,600 00	
Miss M. L. Newton	1,400 00	
Miss H. Fairbairn	1,375 00	
Miss E. V. Bethune	1,375 00	
Miss E. Creighton	1,375 00	
Miss H. G. B. Woolryche	1,375 00	
Mrs. A. C. Jones	1,375 00	
Miss A. M. Cordingley	940 00	
Miss E. Aldridge	1,200 00	
Miss A. E. Stennett	1,200 00	
Miss I. Edwards	1,000 00	
Miss H. C. Wrightman	940 00	
Miss C. B. MacFayden	940 00	
Assistants @ \$940 00 per annum:		
Miss M. Burgess, 1 July to 16 October (resigned)	274 17	
Miss M. MacFayden, 15 November to 30 June	587 51	
Miss M. A. Dickinson, 2½ months	200 99	
S. H. Fussell, Attendant (with rooms, heat and light valued at \$420 00 as caretaker of building) 12 months to 30 June	1,200 00	
	<hr/>	\$29,457 67

Gymnasium.

J. W. Barton, Physical Director, 12 months to 30 June	3,600 00	
T. A. Reed, Financial Secretary, 12 months to 30 June (charged to receipts from Athletic Field)	3,300 00	
D. M. Barton, Gymnasium Instructor, 10 months' salary	2,350 00	
W. W. Winterburn, Swimming Instructor, 10 months' salary	1,900 00	
A. Williams, Instructor, 12 months to 30 June (reduced service), \$550 00; Instruction in Fencing, 15 weeks @ \$10 00, \$150 00	700 00	
Part-time Instructors:		
A. Francis, 30 weeks @ \$15 00	450 00	
W. Knox, 4 weeks @ \$37 50	150 00	
A. Durnan, 10 weeks @ \$15 00	150 00	
F. Halbus (paid also in Ontario College of Education)	150 00	
Locker Attendants, each 12 months to 30 June:		
George Hare	1,250 00	
W. Rimmer	1,250 00	
	<hr/>	\$15,250 00

Graduate Studies.

Professor J. P. McMurrich, Honorarium as Chairman	\$300 00	
	<hr/>	\$300 00

1. *Salaries.—Continued.**Military Studies.*

Professor W. R. Lang, Director, 12 months to 30 June	\$5,700 00	\$5,700 00
---	------------	-------------------

General Service.

S. J. Apted, services as Beadle, 12 months to 30 June, (paid also \$825 00 as caretaker of Convocation Hall, and \$300 00 for supervising Architectural building)	125 00	
A. Bain, Attendant and Messenger, President's Office, 12 months to 30 June	1,150 00	
J. Christie, Chief Officer of Discipline, 12 months to 30 June, \$2,000 00; allowance credited to Pension Fund for year, \$100 00	2,100 00	
	<u>3,375 00</u>	3,375 00

\$121,536 84**3,300 00**

Less charged to Athletic Field receipts

\$118,236 842. *Pensions and Retiring Allowances.*

Mrs. Julia Loudon, Ex-President's widow, annual pension	2,500 00	
Professor A. McPhedran, allowance as Emeritus Professor	500 00	
	<u>3,000 00</u>	\$3,000 00

3. *President's Office.*

Office supplies, postage, printing and incidentals (\$345 10):		
President Sir Robert Falconer, sundry disbursements	47 57	
Librairie Beauchemin Limitee, repairs	12 00	
Office Specialty Mfg. Co., cases, folders, etc.	16 04	
Ryerson Press, printing report	165 24	
University Press, printing and stationery	104 25

		<u>\$276,092 08</u>

II. FACULTY OF ARTS.

25. *Salaries.*

(1) Departments in University of Toronto (\$346,478.75.)

Mathematics.

Professors, each 12 months to 30 June:		
A. T. DeLury	\$5,700 00	
M. A. Mackenzie	5,400 00	
J. C. Fields	5,400 00	
S. Beatty, Associate Professor, 12 months to 30 June	3,750 00	
Assistant Professors, each 12 months to 30 June:		
I. R. Pounder	3,125 00	
J. L. Synge	2,700 00	
Fellow (Sessional):		
A. B. Stevenson	700 00	
Miss M. E. G. Waddell, (\$700.00 extra services, \$50.00)	750 00	
W. S. Ferguson, Lecturer in Accounting (Sessional—paid also \$400.00 in Political Science.)	600 00	
		<u>\$28,125 00</u>

Mechanics.

W. J. Loudon, Professor, 12 months to 30 June	5,700 00	
N. E. Sheppard, Lecturer (Sessional), Mechanics and Mathematics	1,800 00	
		<u>\$7,500 00</u>

Physics.

J. C. McLennan, Professor, 12 months to 30 June	6,000 00
E. F. Burton, Associate Professor, 12 months to 30 June	4,320 00
Assistant Professors, each 12 months to 30 June:	
L. Gilchrist	3,560 00
J. Satterly, including Assistant Directorship of Undergraduate Laboratory	4,200 00
H. A. McTaggart	3,125 00
Demonstrators (Sessional):	
Miss F. Quinlan (paid also \$150 in Special Research)	1,300 00
Miss K. Crossley	1,200 00
Miss I. Giles	1,200 00

25. *Salaries.*—Continued.

Miss M. I. Mackey	\$1,200 00
Miss H. C. Millar	1,200 00
V. P. Lubovich, 10 December to 31 May (paid also \$125 in Special Research)	713 70
Assistant Demonstrators (Sessional):	
P. Lowe (paid \$125 in Special Research)	700 00
E. D. MacInnes	700 00
W. L. McQuarrie	700 00
Class Assistants (Sessional):	
Miss H. I. Eadie	250 00
F. W. Kemp (paid also \$181.67 in Special Research)	250 00
Miss A. T. Reed, Class Assistant and Secretary, 12 months' salary	1,500 00
Miss M. Swonnell, Clerical Assistant, 9½ months to 30 June, @ \$75 per month	712 50
Mechanicians, each 12 months to 30 June:	
T. S. Plaskett	2,400 00
J. R. Dowdell, Assistant	1,600 00
E. Slade, Assistant	1,600 00
R. H. Chappell, Glass-blower, 10 August to 30 June @ \$200 a month	2,141 95
P. Blackman, Lecture and Laboratory Assistant, 12 months' salary	1,400 00
	\$41,973 15

Astronomy.

C. A. Chant, Professor, 12 months to 30 June	4,920 00
Assistants (Sessional):	
J. A. Pearce	600 00
F. L. Blake	150 00
J. B. Russell	75 00
W. S. Vaughan	75 00
	\$5,820 00

Geology.

Professors, each 12 months to 30 June:	
A. P. Coleman, also Dean of Faculty	6,000 00
W. A. Parks, Palæontology	5,220 00
A. MacLean, Assistant Professor, 12 months to 30 June	3,125 00
Laboratory Attendants @ \$75 a month:	
W. Lilly, 4 days	10 00
D. Driscoll, 7½ months 12 days to 31 May	592 50
	\$14,947 50

Mineralogy.

T. L. Walker, Professor, 12 months to 30 June	6,000 00
A. L. Parsons, Associate Professor, 12 months to 30 June	3,840 00
Ellis Thomson, Lecturer (Sessional)	2,500 00
W. Allingham, Attendant, 8 months' salary	680 00
	\$13,020 00

Chemistry.

Professors, each 12 months to 30 June:	
W. Lash Miller, Physical Chemistry	5,700 00
F. B. Kenrick	4,800 00
F. B. Allan, Organic Chemistry	4,800 00
Assistant Professors, each 12 months to 30 June:	
L. J. Rogers	3,250 00
J. T. Burt-Gerrans, Electro-Chemistry	3,125 00

25. Salaries.—Continued

Lecturers (Sessional):		
W. S. Funnell	\$2,625 00	
W. H. Martin	2,500 00	
Assistants (Sessional):		
J. E. Clark	1,800 00	
M. E. Smith	1,000 00	
N. A. Clark	850 00	
T. C. McMullen	850 00	
C. S. Gilbert	750 00	
E. Haas	750 00	
W. Leaf	750 00	
G. H. W. Lucas	750 00	
J. W. Rebbeck	750 00	
Miss I. L. Roberts	750 00	
G. Williams	750 00	
E. W. Todd, 1 month (paid also \$1,750 in Special Research)	250 00	
E. J. Repath, Laboratory Assistant (with rooms, heat, and light valued at \$420 as caretaker of Chemical building), 12 months to 30 June, \$1,100.00; Lecture Assistant (Sessional) \$300 00	1,400 00	
Laboratory Attendants, each 12 months to 30 June:		
W. Banton	600 00	
S. King	450 00	
		\$39,250 00
<i>Biology.</i>		
B. A. Bensley, Professor, Zoology, 12 months to 30 June	5,400 00	
Associate Professors, each 12 months to 30 June:		
W. H. Piersol, Mammalian Anatomy	4,500 00	
E. M. Walker	3,900 00	
A. G. Huntsman, Marine Biology (without salary)		
Assistant Professors, each 12 months to 30 June:		
W. A. Clemens, Elementary Biology, @ \$3,125 of which \$2,000 paid from Special Research Fund	1,125 00	
A. F. Coventry, Vertebrate Embryology	3,125 00	
Lecturers (Sessional):		
J. R. Dymond, Systematic Vertebrate Zoology	2,000 00	
E. H. Cragie, Comparative Anatomy	1,875 00	
J. W. MacArthur, Experimental Biology (paid also \$250 in Physiology)	1,875 00	
W. H. T. Baillie, Mammalian Anatomy	2,000 00	
H. G. Armstrong, Demonstrator (sessional)	700 00	
Miss N. Ford, Special Assistant for Household Science (Sessional)	600 00	
Class Assistants (Sessional):		
L. Pequegnat (paid also in Anatomy)	200 00	
A. E. McCulloch	180 00	
N. B. Laughton	160 00	
J. M. Macdonald	150 00	
O. C. J. Withrow	150 00	
H. D. Ball	100 00	
N. Found	100 00	
P. J. F. Houston	100 00	
A. G. McPhedran	80 00	
P. D. Spohn (paid also in Anatomy)	50 00	
W. J. K. Harkness	25 00	
W. V. Johnston	20 00	
L. M. Murray	20 00	
H. W. Price	20 00	
N. K. Bigelow, Assistant in Systematic Biology (10 months—half time)	625 00	
Preparator Service @ 65c. to 75c. per hour:		
J. E. Bates, 609 hours	456 75	

25. *Salaries.*—Continued.

R. C. Riley, 443 hours	\$310 10
Miss M. Maitland, 50 hours	32 50
A. Pride, Sub-Curator, Biological Museum, 12 months to 30 June	1,050 00
E. B. S. Logier, Museum Assistant and Cataloguer (10 months— half time)	625 00
Miss E. Mason, Office Assistant, 12 months to 30 June	1,000 00
Laboratory Attendants:	
J. T. Howells, 12 months to 30 June	1,200 00
S. G. Smith, Junior, 7½ months, 13 days to 4 June @ \$56 per month	443 38
Miss N. C. Lawler, Departmental Secretary, 12 months salary ..	1,000 00
	<hr/>
	\$35,197 73

Botany.

J. H. Faull, Professor, 12 months to 30 June	4,920 00
R. B. Thomson, Associate Professor, 12 months to 30 June ...	4,320 00
Lecturers (Sessional):	
G. H. Duff	2,125 00
Miss J. G. Wright	1,500 00
Assistants (Sessional):	
A. R. Walker (paid also \$400 in Special Research)	1,400 00
E. H. Moss	1,200 00
H. D. Brown	200 00
F. B. Adamstone	150 00
Miss L. M. Hunter	100 00
Miss J. McGugan, Fellow (Sessional)	500 00
Technical Assistants, each 12 months salary:	
Miss M. E. Currie	1,000 00
Miss M. V. McCulloch	1,000 00
A. Simpson, Gardener (with living quarters valued at \$360), 12 months to 30 June	1,600 00
Laboratory Attendants @ \$9 00 a week	
F. Christie, 41 weeks, 5 days	376 50
J. Tiboldo, 6 weeks, 3 days	60 00
Occasional service, sundry persons	34 20
	<hr/>
	\$20,485 70

Bio-Chemistry.

Andrew Hunter, Professor, 12 months to 30 June	6,000 00
Associate Professors, 12 months to 30 June:	
H. B. Speakman, Zymology (without salary—paid in Special Research)	
H. Wasteneys (paid also \$100.00 in Medical Faculty)	3,875 00
Miss J. McFarlane, Demonstrator (Sessional)	1,200 00
Fellows (Sessional):	
N. S. Clark (paid also \$85 in Special Research)	900 00
R. W. I. Urquhart (paid also \$85 in Special Research)	900 00
H. Borsook	600 00
A. M. Wynne (paid also \$1,200 in Special Research)	600 00
J. W. Fletcher, Technician, 12 months to 30 June	1,200 00
Miss E. Dempsey, Technical Assistant, 9½ months to 30 June @ \$900 00 per annum	712 50
A. E. Giddens, Laboratory Assistant, 12 months to 30 June ...	1,000 00
Miss M. Delamere, Secretary Assistant, 12 months salary	1,000 00
S. Lloyd, Cleaner, 9½ months to 30 June @ \$75 per month of which half charged to Pharmacology	356 25
	<hr/>
	\$18,343 75

25. *Salaries.*—Continued.*Physiology.*

J. J. R. Macleod, Professor, 12 months to 30 June (paid also \$1,500.00 as Associate Dean, Faculty of Medicine) ..	\$6,000 00
Assistant Professors:	
A. C. Redfield, 1 month @ \$2,700 00 per annum (resigned)	225 00
J. M. D. Olmstead, 11 months to 30 June @ \$3,000 00 per annum	2,750 00
N. B. Taylor, Lecturer, also for Veterinary students (Sessional paid also \$500 00 in Special Research)	3,250 00
J. W. MacArthur, Demonstrator (Sessional—paid also in Biology)	250 00
Fellows (Sessional)	
Miss J. Lang	800 00
S. U. Page	800 00
C. H. Best (part time—paid also \$285 in Special Research)	400 00
E. C. Noble (part time—paid also \$285 in Special Research)	400 00
Miss C. J. Fraser (part time)	300 00
C. F. Knight (Michaelmas Term)	150 00
Departmental Librarians:	
Mrs. M. E. McFarlane, 4 mos. to 31 October (resigned) @ \$1,000 per annum	333 33
Miss M. Grange, 8 mos. to 30 June @ \$70 per month	560 00
Miss M. E. Armour, Assistant and Secretary, 10 mos. @ \$ 1,000 per annum; 2 mos. (part time) @ \$50 per month	933 33
E. Brock, Mechanic, 12 mos. salary	1,440 00
F. L. Robinson, Laboratory Assistant and Glassblower, 12 mos. to 30 June	1,600 00
Laboratory Assistant for Teaching Laboratories @ \$75 per month	
S. R. Smith, 3 mos., \$225, less deducted \$9.24	215 76
J. Creasy, 6 mos. to 30 June	450 00
W. Joyce, Animal Attendant, 12 mos. salary	1,050 00
Mrs. R. Green, Laboratory Cleaner (part time)	394 50
	<hr/>
	22,301 92

History and Ethnology.

G. M. Wrong, Professor, 12 mos. to 30 June	6,000 00
Associate Professors, each 12 mos. to 30 June:	
R. Hodder Williams	3,875 00
G. M. Smith	3,875 00
R. Flensey	3,875 00
W. P. M. Kennedy, Assistant Professor, 12 mos. to 30 June	3,440 00
Special Lecturers (Sessional):	
W. S. Wallace (paid also as Assistant Librarian)	1,000 00
S. H. Hooke	940 00
Instructors (Sessional):

L. Bruce Robertson	50 00
L. A. Pequegnat (paid also in Biology)	50 00
E. E. Shouldice (paid also in Surgery)	50 00
I. R. Smith	50 00
P. D. Spohn (paid also in Biology)	50 00
E. A. McCulloch	50 00
F. V. Stock	50 00
Miss G. Dowsley, Technical and Clerical Assistant, 12 mos. to 30 June	550 00
G. Lynne, Laboratory Assistant and Caretaker, 2 mos. @ \$1,100 per annum; 10 mos. @ \$1,450	1,391 67
Laboratory Attendant and Assistant Caretaker: Robt. Eades, 8 1/3 weeks @ \$17	141 48
H. McCormick, 30 August to 30 June @ \$28 per week	1,222 67

\$14,405 82*Pathology and Bacteriology.*

J. J. Mackenzie, Professor, 12 mos. to 30 June	\$6,000 00
H. B. Maitland, Assistant Professor, 12 mos. to 30 June	2,700 00
Fellows (Sessional)	
G. C. Cameron	1,000 00
W. P. Warner	1,000 00

46. Salaries.—Continued.

W. L. Robinson, Demonstrator and Assistant Curator of Pathological Museum (Sessional)	\$250 00
Assistants (Sessional)	
I. H. Erb	100 00
A. B. LeMesurier (paid also in Surgery)	100 00
A. Mackay	50 00
G. F. Laughlen	50 00
G. R. Philp	50 00
F. Thibault, Technician, 12 mos. to 30 June	1,200 00
A. Wilson, Laboratory Assistant, 12 mos. to 30 June (paid also \$750 as caretaker, Pathological building)	600 00
Laboratory attendants for preparing media: Miss E. A. Gordon, 3 mos. @ \$55 54; 8 mos. @ \$70	726 65
A Meyers, 4 mos. @ \$37; 8 mos. @ \$45	508 00
Miss I. E. Ruttan, Stenographer, 12 mos. to 30 June	1,050 00
	\$15,384 65

Pathological Chemistry.

V. J. Harding, Professor, 12 mos. to 30 June	\$4,800 00
C. G. Imrie, Assistant Professor, 3 mos. to 30 September @ \$2,350 per annum (resigned)	587 50
D. H. Boddington, Assistant in Clinical Laboratory (Sessional)	500 00
Fellows (Sessional):	
O. H. Gaebler (paid also \$200 in Special Research) ..	1,000 00
C. T. Potter	1,000 00
A. P. Hart (transferred to Pediatrics 1 January).....	187 50
W. S. Quint (Easter Term)	312 50
P. E. Faed, Demonstrator (Sessional—withdraw 31 January)	250 00
T. Richardson, Laboratory Assistant, 12 mos. to 30 June.....	1,000 00
Laboratory Attendants:	
Mrs. M. Davis, 12 mos. to 30 June (part time)	303 87
L. Sutton, 12 weeks @ \$10; 25 weeks, 4 days @ \$12 ..	428 00
	\$10,369 37

Pharmacy and Pharmacology.

V. E. Henderson, Professor, 12 mos. to 30 June	5,000 00
N. C. Sharpe, Assistant Professor, 11 mos. to 30 June, @ \$2,700 per annum	2,475 00
Class Assistants (Sessional):	
J. A. MacDonald	275 00
Miss D. Birkett	100 00
J. C. Hallamore	75 00
A. Brock, Laboratory Assistant, 3 mos. @ \$1,050 per annum; 9 mos. @ \$1,200	1,162 50
S. Lloyd, Cleaner, 9½ mos. from 16 September @ \$75 per month of which half charged to Bio-Chemistry	356 25
Miss J. Deas, Secretary and Librarian, 10 mos. salary	900 00
	\$10,343 75

Medicine and Clinical Medicine.

D. Graham, Professor, 12 mos. to 30 June	10,000 00
Associate Professors, each 12 mos. to 30 June:	
J. T. Fotheringham	700 00
W. B. Thistle	600 00
G. Chambers	450 00
H. B. Anderson (without salary)
W. Goldie (without salary)
Clinicians (Annual):	
W. R. Campbell	2,500 00
H. K. Detweiler	2,500 00
R. G. Armour, 6 mos. @ \$2,500 per annum	1,250 00
A. A. Fletcher	1,500 00

46. Salaries.—Continued.

R. Jamieson, 11 mos. @ \$1,500 per annum	\$1,375 00
N. M. Keith, 3 mos. to 1 Oct. @ \$1,500 per annum (resigned)	375 00
Clinicians (Sessional-without salary):	
G. F. Boyer	
A. W. Canfield	
A. H. W. Caulfield	
F. A. Clarkson	
E. E. Cleaver	
H. A. Dixon	
J. H. Elliott	
A. M. Goulding	
N. Gwyn

H. Spohn	
E. J. Trow	
G. S. Strathy	
G. S. Young	
Demonstrators, Clinical Microscopy (Sessional):	
G. W. Loughheed	250 00
A. B. Moffat, Assistant	100 00
Technicians:	
L. Heddick, 1 July to 31 Dec. @ \$1,500 per annum (resigned)	750 00
Miss P. D. Denne, 17 Jan'y to 30 June @ \$900 per annum	412 50
C. G. Dix, 3 mos. @ \$50; 2 mos. @ \$75	300 00
Miss R. E. Ratz, Chemistry, 12 mos. to 30 June	1,000 00
Secretarial Assistants @ \$75 per month:	
Miss D. Murray, 2 mos. to 31 August (resigned)	150 00
Miss M. Harvie, 9 mos. from 1 October	675 00
Sub-Department of Pediatrics:	
Alan Brown, Associate Professor (without salary)
Chemists (Annual)	
Miss A. Courtney	2,500 00
Miss I. F. MacLachlan, Assistant	1,500 00
Research Fellows, each 6 mos. from 1 January @ \$100 a month	
Miss G. Boyd	600 00
A. P. Hart, (transferred from Pathological Chemistry)	600 00
	<hr/>
	\$30,087 50
Charged to Eaton Endowment	\$17,087 50
	<hr/>

\$13,000 00

46. *Salaries.*—Continued.*Surgery and Clinical Surgery.*

Professors, each 12 mos. to 30 June:	
I. H. Cameron (retired)	\$1,050 00
A. Primrose (paid also as Dean)	700 00
Associated Professors, each 12 mos. to 30 June:	
G. A. Bingham	700 00
H. A. Bruce	700 00
F. N. G. Starr	700 00
C. L. Starr (Orthopedics)	700 00
W. McKeown	700 00
S. M. Hay	450 00
Associates, each 12 mos. to 30 June:	
C. B. Shuttleworth	300 00
J. F. Uren	300 00
G. Silverthorn (paid also \$700 as Professor of Medical Jurisprudence)	300 00
W. E. Gallie	300 00
Wallace A. Scott (paid also in Anatomy)	300 00

	\$1,253 11

(b) Maintenance of Department (\$2,887.00):

Supplies and Apparatus (\$1,205.23):	
Allen Mfg. Co., laundry	4 99
Allied Publishers Ltd., books	83 13

51. *Department of Medicine.*—Continued.

The Bursar, postage supplied	\$16 50
Canadian Laboratory Supplies, chemicals	8 14
Connaught Antitoxin Laboratories, Antitoxin Division, animals	10 00
Mrs. Davis, sundry cleaning	82 16
Professor Duncan Graham, disbursements:	
Laboratory supplies	31 60
Ingram & Bell, surgical instruments, chemicals, filter- paper etc.	484 44
Geo. A. McCogne, animals	7 50
A. McKinn, rabbits	39 75
Office Specialty Mfg. Co., cards	12 64
H. B. Post, plates	25 00
C. Potter, stereoptican, etc.,	96 80
J. G. Ramsey Co., plates	10 03
Geo. Sparrow & Co., saucepans	7 00
Synthetic Drug Co., mice	54 97
H. B. Tapscott, guinea pigs	11 25
University Press, printing and stationery	136 35
Petty items (3)	8 15
Freight charges, etc.,	11 58
Superintendent's Dept., labour, \$39.00; material, \$24.25 ...	63 25
Sub-Department of Pediatrics	
Apparatus and supplies (\$1,151.25)	
The Bursar, postage supplied	3 00
Canadian Laboratory Supplies, evaporating dishes, bottles, etc.	51 60
L. J. Cartwright, slides	38 25
T. Eaton Co., cards	3 00
Professor Duncan Graham, disbursements:	
Laboratory supplies	15 64
Grand & Toy, stationery	4 00
J. F. Hartz Co., condensers, tubing, chemicals, etc.,	129 12
Hospital for Sick Children, slides	6 00
Ingram & Bell, chemicals, tubing, flasks, thermometers etc.,	863 17
Richards Glass Co., tubes	24 55
Superintendent's Dept., material	12 92
Books and Periodicals (\$530.52)	
H. K. Lewis & Co., reprints	88 12
McAinsh & Co., books	22 25
Students' Book Dept., books	331 45
University Press, binding	88 70
	<hr/>
	\$4,140 11
Charged to Eaton Endowment	2,887 00
	<hr/>
	\$1,253 11

52. *Surgery.*

Supplies and Laboratory Expenses (\$170.68)	
T. W. Butler, cabinet	\$25 39
J. F. Hartz Co., skeleton	54 00
Geo. M. Hendry Co., chalk	6 86
Professor A. Primrose, disbursements: supplies	12 30
Superintendent's Dept., labour, \$5.63; material, \$4.00	9 63
University Press, printing and stationery	62 50
Apparatus (\$20.79)	
J. G. Ramsey & Co., slide boxes	20 79
	<hr/>
	\$191 47

53. *Obstetrics and Gynaecology.*

Supplies and Apparatus (\$61.99)	
J. F. Hartz Co., knives, etc.	29 68
Ingram & Bell, chemicals	6 56

53. *Obstetrics and Gynecology.*—Continued.

C. Potter, slide boxes	\$5 00
Robert Simpson Co., laboratory coat	6 00
University Press, printing	14 75

\$61 9954. *Ophthalmology.*

(Nothing spent.)

55. *Oto-Laryngology.*

Supplies and Apparatus (\$175.25)

F. Cantlon, frames	\$12 00
Geo. M. Hendry Co., blackboard	21 56
Medical Stores, M. D. 2, supplies	5 00
Dr. J. D. Morgan, viewing box and lamps	65 00
Miss M. N. Roebuck, painting	63 15
Petty items (2)	8 54

\$175 2556. *Therapeutics.*

Supplies and Apparatus (\$53.45)

J. F. Hartz Co., chemicals	\$8 75
Students' Book Dept., books	18 50
Toronto General Hospital, cards	26 20

\$53 4557. *Hygiene.*

Supplies (\$885.72)

Bennett Letter House, circular letters	\$12 05
The Bursar, postage supplied	28 00
Canadian Laboratory Supplies, chemicals	82 56
Canadian Public Health Association, folders	15 00
City of Toronto, Health Department, slides	12 00
Digestive Ferments Co., chemicals	60 54
T. Eaton Co., towelling	10 66
Wm. Fenton, slides	45 60
Dr. J. G. Fitzgerald, disbursements:	
Laboratory and office supplies.....	22 46
Grand & Toy, cards	7 00
J. F. Hartz Co., chemicals	56 87
G. B. Henderson & Co., brokerage	5 90
Hudson-Parker Co., coats	21 42
Ingram & Bell, chemicals	288 77
Lyman Bros. & Co., chemicals, tubes etc.,	43 84
S. J. Manchester, charts	32 00
The Map Co., map	5 10
J. F. Raw, Ltd., drawing board	17 50
United Typewriter Co., inspection	3 00
W. O. Ward, meat	6 20
University Press, printing and stationery	103 50
Superintendent's Dept., material	5 75

Apparatus (\$1,030.38)

Wm. Bartlett, shades	8 46
Canadian Laboratory Supplies, instruments	11 87
Canadian Office Appliance and Supply Co., line-a-time	19 50
Wm. Fenton, wire baskets	77 36
J. F. Hartz Co., syringes	7 35
Geo. H. Hees Son & Co., shades	63 15
Ingram & Bell, chemicals and instruments	266 07
Pathscope of Canada, stereoptican	97 82
Scientific Materials Co., test tube holders	215 19
United Typewriter Co., typewriter	121 50
University of Toronto, Engineering Society, rule	10 50

57. *Hygiene*.—Continued.

Wrought Iron Range Co., boiler	\$19 13	
Superintendent's Dept., labour, \$41.28; material, \$71.34 ..	112 62	
Alterations (\$585.73)		
Superintendent's Dept., labour, \$320.26; material, \$265.47	585 73	
		\$2,501 83

58. *Medical Jurisprudence*.

(Nothing spent.)

59. *Medical Building*.

Heat and light (supplied from Central Power Plant):		
Gas, city current and occasional fuel (\$318.43):		
Consumers' Gas Co.,	\$318 43	
Water (\$649.54):		
City Treasurer	649 54	
Caretaker's supplies (\$294.63):		
Superintendent's Dept., labour, \$4.56; material, \$290.07 ...	294 63	
Cleaning (\$1,640.50):		
Allen Mfg., laundry	\$4 80	
Canadian Cleaning Co., cleaning windows	50 00	
Superintendent's Dept., labour	1,585 70	
Repairs and renewals (\$2,802.45):		
Wm. Bartlett & Son, repairs to shades	5 00	
City Treasurer, elevator license	5 00	
W. Hood, exterminating rats	5 37	
A. Matthews Ltd., felt and gravel roofing	575 00	
Routery Bros., lathing and plastering	11 70	
University Press, name-plates etc.,	1 50	
Superintendent's Dept., labour, \$1,735.39; material, \$463.49	2,198 88	
Alterations in basement for Women Students (\$751.31):		
R. Robertson & Sons, cutting doorway, building wall	207 10	
Routery Bros., lathing and plastering	32 00	
Superintendent's Dept., labour, \$492.51; material, \$19.70 ..	512 21	
		\$6,456 86
Less Sundry Credits:		
Sale of lockers	\$38 50	
Cleaning	34 80	
Repairs	16 43	
		89 73
		\$6,367 13
Caretaker, Thos. Motton, 12 mos. to 30 June	1,400 00	
Assistant to caretaker, J. Cattle, 12 mos. to 30 June	1,000 00	
		\$3,767 13

60. *Pathological Building*.

Heat and light (\$5,904.26):		
Toronto General Hospital	\$5,904 26	
Gas and City current (\$1,122.08):		
Consumers' Gas Co.,	1,122 08	
Water (\$396.02):		
City Treasurer	396 02	
Caretaker's supplies (\$200.00):		
Superintendent's Dept., labour \$4.00; material, \$196.00 ...	200 00	
Cleaning (\$1,239.45):		
Allen Mfg. Co., laundry	3 45	
Canadian Cleaning Co., cleaning windows	30 00	
Superintendent's Dept., labour	1,206 00	
Repairs and renewals (\$601.86):		
Canadian Ice Machine Co., repairs	30 99	
City Treasurer, elevator license	10 00	
University Press, name plates	3 60	

60. *Pathological Building.*—Continued.

Superintendent's Dept., labour, \$253.25; material, \$304.02..	\$557 27	
Caretaker, Alex. Wilson 12 mos. to 30 June (paid also as laboratory attendant)	750 00	\$10,213 67

61. *General Expenses.*

Stationery, printing, postage, office supplies etc. (\$2,649.40):		
Addresser-press, machine and stencils	\$142 62	
The Bursar, postage supplied	241 44	
Canadian Office Appliance and Supply Co., line-a-time model	19 50	
Grand & Toy Ltd., chair cushions	3 80	
A. S. Hustwitt & Co., cabinet and stencils	22 00	
Might Directories Ltd., directory	15 30	
Dr. E. S. Ryerson, disbursements:		
Telegrams, \$9.95; carfares \$8.00	17 95	
Students Book Dept., Books	24*00	
United Typewriter Co., inspections	22 50	
University Press, printing and stationery	2,137 90	
Superintendent's Dept., labour, \$1.35; material, \$1.04	2 39	
Typewriters, Etc. (\$255.15)		
United Typewriter Co., typewriter	255 15	
Furnishing room in Toronto General Hospital (\$289.06)		
Murray-Kay Ltd., linoleum	79 50	
Office Specialty Mfg. Co., chairs etc.	132 86	
Superintendent's Dept., labour, \$51.03; material, \$25.67.....	76 70	
Appropriation for Dean's Office (\$488.43)		
Dr. A. Primrose, sundry disbursements	140 71	
Dr. J. J. R. MacLeod, sundry disbursements	67 07	
Secretary-Treasurer, Hart House, entertaining guests of Faculty of Medicine and special dinner	80 65	
Miss H. Sharpe, clerical assistance to Dean	210 00	
	\$3,682 04	
Less sale of typewriters (2)	50 00	\$3,632 04

62. *Summer Session in Medicine and Special Post-Graduate Courses.*

Remuneration to Instructors:

(a) Summer Session (\$1,520.00):

H. W. Baker	\$70 00
C. E. C. Cole	70 00
H. K. Detweiler	70 00
J. G. Gallie	70 00
Wm. Goldie	70 00
R. R. Graham	70 00
W. B. Hendry	70 00
N. M. Keith	70 00
W. W. Lailey	70 00
O. R. Mabee	70 00
A. G. McPhedran	70 00
R. D. Rudolph	70 00
Wm. A. Scott	70 00
G. E. Wilson	70 00
A. B. Wright	70 00
G. S. Young	70 00
R. G. Armour	40 00
Angus Campbell	40 00
G. W. Howland	40 00
H. S. Hutchison	40 00
D. N. MacLennan	40 00
C. B. Parker	40 00
E. S. Ryerson	40 00
N. S. Shenstone	40 00
J. S. Simpson	40 00
J. Sproule-Manson	40 00

62. Summer Session of Special Courses, etc.—Continued.

(b) Course in Paediatrics (\$240 00):	
G. A. Morgan	\$40 00
G. A. Davis	30 00
R. Simpson	30 00
G. F. Boyer	25 00
I. Erb	25 00
G. Pirie	25 00
B. Hannah	20 00
A. H. Rolph	20 00
Geo. F. Smith	15 00
L. B. Robertson	10 00
(c) Post Graduate Course, December (\$390.00):	
Wm. Goldie	33 75
R. A. Jamieson	33 75
L. Murray	33 75
John Oille	33 75
J. G. Gallie	22 50
W. B. Hendry	22 50
W. W. Lailey	22 50
K. C. McIlwraith	22 50
Wm. Albert Scott	22 50
B. P. Watson	22 50
G. A. Bingham	5 00
H. A. Bruce	5 00
F. A. Cleland	5 00
R. E. Gaby	5 00
W. E. Gallie	5 00
R. R. Graham	5 00
R. I. Harris	5 00
A. B. LeMesurier	5 00
O. R. Mabee	5 00
J. A. McCollum	5 00
A. S. Moorhead	5 00
C. B. Parker	5 00
A. Primrose	5 00
J. A. Roberts	5 00
D. E. Robertson	5 00
L. B. Robertson	5 00
E. S. Ryerson	5 00
N. S. Shenstone	5 00
E. E. Shouldice	5 00
C. B. Shuttleworth	5 00
C. L. Starr	5 00
F. N. G. Starr	5 00
G. E. Wilson	5 00
A. B. Wright	5 00
(d) Post Graduate Course, May (\$333.00)	
R. Jamieson	28 00
L. Murray	28 00
John Oille	28 00
J. G. Gallie	20 00
W. B. Hendry	15 00
F. W. Marlow	15 00
K. C. McIlwraith	15 00
D. J. G. Wishart	11 25
Wm. Goldie	10 50
J. A. Kinnear	10 00
W. A. Scott	10 00
R. E. Gaby	9 45
W. E. Gallie	9 45
R. R. Graham	9 45
A. B. LeMesurier	9 45
A. S. Moorhead	9 45
D. E. Robertson	9 45
N. S. Shenstone	9 45

62. Summer Session of Special Courses, etc.—Continued.

C. B. Shuttleworth	\$9 45	
C. L. Starr	9 45	
G. E. Wilson	9 45	
C. E. Hill	7 50	
W. H. Lowry	7 50	
W. W. Wright	7 50	
V. J. Harding	7 00	
W. W. Lailey	7 00	
G. M. Biggs	6 75	
G. Royce	4 50	
Sundry Expenses:		
The Bursar, postage supplied	65 36	
University Press, printing	164 30	
		<u>\$2,712 66</u>
		<u><u>\$155,357 15</u></u>

IV. FACULTY OF APPLIED SCIENCE.

63. Salaries.

C. H. Mitchell, Dean, 12 mos. to 30 June	\$6,000 00	
		<u>\$6,000 00</u>

Electrical Engineering.

Professors, each 12 mos. to 30 June:		
T. R. Rosebrugh	\$5,700 00	
H. W. Price	4,800 00	
Lecturers (Sessional):		
W. S. Guest	2,810 00	
A. R. Zimmer	2,625 00	
Demonstrators (Sessional):		
W. H. Orr	1,100 00	
H. S. Brown	1,000 00	
S. K. Cheney	1,000 00	
W. A. Dancy	1,000 00	
R. D. Huestis	1,000 00	
A. L. Tennyson	1,000 00	
W. J. Nichol (4 months)	500 00	
Electricians:		
W. R. McKee, 12 mos. to 30 June	1,800 00	
G. Moir, Assistant, 18 Oct. to 30 June @ \$700 per annum.	493 52	
T. R. Carter, Assistant, 3 weeks, 5 days @ \$13.42 per week	49 86	
J. W. Lawson, Mechanician, 12 mos.' salary (paid also \$800 in Special Research)	1,100 00	
		<u>\$25,978 38</u>

Mechanical Engineering.

R. W. Angus, Professor, 12 mos. to 30 June	\$5,220 00
L. M. Arkely, Associate Professor, 2 mos. to 31 Aug. @ \$2,850 per annum (resigned)	475 00
J. H. Parkin, Assistant Professor, Hydraulics, 12 mos. to 30 June (paid also \$500 in Special Research)	2,700 00
N. F. P. Death, Special Lecturer, 4 mos.	800 00
U. C. Holland, Assistant, Machine Design (Sessional)	1,500 00
H. A. Tuttle, Instructor, Thermodynamics (Sessional)	1,500 00
Demonstrators, Thermodynamics (Sessional):	
R. C. Hardie	1,000 00
A. L. Stewart	1,000 00
H. K. Dutcher, Special Instructor, Hydraulics (Sessional)	1,200 00
Demonstrators, Hydraulics (Sessional):	
N. G. McDonald	1,200 00
J. J. Weicker	1,100 00

63. *Salaries.*—Continued.

F. Hickey, Engineer and Machinist, 11 month's salary (paid also \$150.45 in Special Research)	\$1,650 00	
J. O'Connor, Assistant Machinist, 1112 hrs. @ 85¢	945 20	
W. Odd, Fireman, 1516 hrs. @ 55¢	833 80	
Laboratory Assistants:		
G. S. Laing, 3 mos. to 30 Sept. @ \$1,200 per annum (transferred to Electrical Bldg.)	300 00	
F. Millen, 1368 hrs. @ 50¢	684 00	
	<hr/>	\$22,108 00

Applied Mechanics.

Professors, each 12 mos. to 30 June:		
J. McGowan	\$5,100 00	
P. Gillespie	4,800 00	
C. R. Young, Associate Professor, 12 mos. to 30 June	3,840 00	
A. T. Laing, Assistant Professor (part time—paid also as Secretary to Faculty)	1,250 00	
S. G. Bennett, Lecturer, Commercial Engineering (Sessional—paid also \$400 as Assistant Secretary to Faculty)	1,875 00	
Demonstrators (Sessional):		
C. A. Hughes (paid also \$100 in Special Research)	1,000 00	
W. L. Sagar (half time—paid also \$600 in Special Research)	500 00	
W. K. Simpson, Mechanician, 12 mos. to 30 June	1,750 00	
John Brown, Laboratory Attendant, 8 mos. salary	650 00	
	<hr/>	\$20,765 00

Mining Engineering.

H. E. T. Haultain, Professor, 12 mos. to 30 June	\$5,700 00	
F. C. Dyer, Assistant Professor, 12 mos. to 30 June	2,700 00	
J. T. King, Lecturer (Sessional)	2,500 00	
W. F. Green, Demonstrator (Sessional)	1,000 00	
E. Tozer, Laboratory Assistant, 12 mos. to 30 June	1,100 00	
C. Waybrant, Laboratory Attendant, 7 mos. salary	700 00	
	<hr/>	\$13,700 00

Metallurgical Engineering.

G. A. Guess, Professor, 12 mos. to 30 June	\$5,700 00	
Lecturers (Sessional):		
Wesley Austin, allowance for Session, part time	420 00	
J. E. Toomer	2,500 00	
J. Stark, Attendant, 9 mos. salary	540 00	
	<hr/>	\$9,160 00

Ferro-Metallurgy.

T. R. Loudon, Associate Professor, 12 mos. to 30 June	\$3,720 00	
	<hr/>	\$3,720 00

Surveying.

L. B. Stewart, Professor of Surveying and Geodesy, 12 mos. to 30 June	\$5,700 00	
W. M. Treadgold, Associate Professor, 12 mos. to 30 June	3,720 00	
S. R. Crerar, Assistant Professor, 12 mos. to 30 June	3,125 00	
Lecturers (Sessional):		
E. W. Banting	2,810 00	
J. W. Melson	1,875 00	
	<hr/>	\$17,230 00

Applied Chemistry.

J. Watson Bain Professor of Chemical Engineering, 12 mos. to 30 June	\$5,100 00	
Associate Professors, each 12 mos. to 30 June:		
M. C. Boswell Organic Chemistry	3,900 00	

63. *Salaries.*—Continued.

E. G. R. Ardagh, Analytical Chemistry	\$3,840 00
C. S. Adams, Lecturer (Sessional—paid also \$400 in Special Research)	1,800 00
O. Rolfsen, Assistant (Sessional)	1,400 00
Demonstrators (Sessional):	
G. G. McDonald	1,200 00
H. C. Soehner (paid also \$300 in Special Research).....	1,200 00
Victor Thomson	1,200 00
A. Hunt, Glass-blower, 8 Oct. to 30 June	1,098 00
D. Sinclair, Laboratory Assistant, 12 mos. to 30 June	1,250 00
Laboratory Attendants:	
J. Johnson, 11 mos. to 31 May @ \$800 per annum	733 34
J. Addison, 1 Oct. to 30 June @ \$8.75 per week	347 10
F. Coles, 1 Oct. to 18 June @ \$8.75 per week	332 50
	<hr/>
	\$23,400 94

Electro-Chemistry.

Demonstrators (Sessional):	
W. R. Fetzer	\$1,500 00
J. Kelleher, @ \$1,300 of which \$500 charged to Special Research	800 00
E. A. Bishop, Lecture Assistant (Sessional..paid also as caretaker, Mining building)	100 00
Laboratory Attendants @ \$35 per month:	
J. Heffron, 1 Oct. to 7 Jan.	113 12
G. Banton, 15 Jan. to 4 June	161 50
	<hr/>
	\$2,674 62

Architecture.

C. H. C. Wright, Professor, 12 mos. to 30 June	\$5,700 00
Associate Professors:	
A. W. McConnell, 12 mos. to 30 June	3,720 00
A. Berrington, 9 mos. to 30 June @ \$3,500 per annum ...	2,625 00
Lecturers (Sessional):	
H. H. Madill	2,310 00
J. L. Banks, Modelling (part time)	1,000 00
C. W. Jeffreys, Freehand Drawing (part time)	1,000 00
F. E. Simpson, Assistant, Modelling (Sessional—half time)...	500 00
Miss J. C. Laing, Instructor and Librarian, 12 mos. to 30 June	1,200 00
Attendants @ \$75 a month:	
G. E. Drake, Modelling, 5 mos. to 28 Feb.	375 00
F. J. R. Martin, 3 mos. to 31 May	225 00
Special Lecturers (Sessional):	
H. B. Dunington-Grubb	200 00
W. A. Langton	50 00
	<hr/>
	\$18,905 00

Drawing.

C. H. C. Wright Professor (paid as Professor of Architecture)	
J. Roy Cockburn, Associate Professor, Descriptive Geometry 12 mos. to 30 June	3,900 00
Lecturers (Sessional):	
W. J. Smither	2,625 00
W. J. T. Wright	2,250 00
Demonstrators (Sessional):	
H. J. Franklin (paid also \$288 in Special Research).....	1,400 00
E. R. Grange	1,400 00
W. B. Dunbar (paid also \$350 in Special Research)	1,200 00
J. H. Curzon	1,000 00
T. S. Graham	1,000 00
C. E. Hastings	1,000 00
W. A. Sibbett	1,000 00

63. *Salaries.—Continued.*

A. C. Wilson	\$1,000 00	
G. R. Workman	1,000 00	
L. C. M. Baldwin (resigned 31 Jan.)	600 00	
A. R. Mendizabel (2 mos.)	300 00	
A. Wardell (4 mos.)	600 00	
G. Brown, Attendant, 8 mos. salary	650 00	
Miss F. Stinson, Office Assistant, 18 Oct. to 28 June @ \$18 to \$20 a week (half time, balance in Engineering Physics)	350 00	
		\$21,275 00

Engineering Physics and Photography.

G. R. Anderson, Associate Professor, 12 mos. to 30 June	\$4,320 00	
Demonstrators (Sessional):		
K. B. Jackson	1,250 00	
J. T. Ransom	1,200 00	
Photographers:		
H. R. Jarvis, 33 weeks @ \$20	640 00	
Miss M. Hines, Assistant, 33 weeks 4 days, @ \$12 to \$17 a week	512 35	
Miss F. Stinson, Office Assistant (see also Drawing)	350 00	
		\$8,272 35

Special Lectures.

A. R. Clute, Lectures, Corporation Law and Limited Companies (paid also in Political Science)	\$400 00	
		\$400 00

Secretary's Office.

A. T. Laing, Secretary to Faculty and Librarian, 12 mos. to 30 June (paid also \$1,250 in Applied Mechanics)	\$2,750 00	
S. G. Bennett, Assistant Secretary, 4 mos. to 30 June @ \$100 per month (paid also in Applied Mechanics)	400 00	
Miss E. Birkett, Record Clerk, 12 mos. to 30 June	1,050 00	
Stenographers, each 12 mos. to 30 June:		
Miss R. Cave	1,000 00	
Miss E. Myers	1,000 00	
		\$6,200 00
		\$199,789 29

64. *Mining Building.*

Heat and light (supplied from Central Power Plant):		
Gas, city current and occasional fuel (\$1,304.24):		
Consumers' Gas Co.	\$1,304 24	
Water (\$251.42):		
City Treasurer	251 42	
Caretaker's supplies (\$338.25):		
Superintendent's Dept., labour, \$4.28; material, \$333.97..	338 25	
Cleaning (\$2,696.20):		
Canadian Cleaning Co., cleaning windows	50 00	
Superintendent's Dept., labour	2,646 20	
Repairs and renewals (\$3,001.46):		
Automatic Telephones & Time Recorders Ltd., repairs	8 70	
Wm. Bartlett & Son, shades	172 96	
City Treasurer, elevator license	10 00	
Crescent Concrete & Paving Co., repairs	75 00	
A. Morton, wiring chairs	17 85	
Otis Fensom Elevator Co., repairing elevator	502 38	

64. *Mining Building.—Continued.*

L. J. Rogers, analyzing soap	\$16 00	
University Press, name plates	15	
Superintendent's Dept., labour, \$1,315.24; material, \$883.18	2,198 42	
		<u>7,591 57</u>
Less sundry credits:

W. H. Cox Coal Co., fuel	203 00	
Ridout & Bethune, teaming	49 00	
Light (\$108.39):		
Consumers' Gas Co.	53 30	
Toronto Hydro-Electric Co.	55 09	
Water (\$60.14):		
City Treasurer	60 14	
Alterations to plumbing, etc (\$3,503.51):		
Routery Bros., lathing and plastering	167 93	
Superintendent's Dept., labour, \$2,220.33; material, \$1,115.25	3,335 58	
		<hr/>
	\$3,924 04	
(b) Housekeeping Account:		
Cleaning and House Service (\$1,597.63):		
Canadian Cleaning Co., cleaning	10 68	
T. Eaton Co., sheeting, cleanser, etc.	67 26	
J. T. Hinchcliffe, waxing floors	17 90	
Industrial Refuge, laundry	200 93	
Toronto Window Cleaning Co.	11 25	
L. White & Sons, cleaning	5 00	
J. T. Wilson, laying linoleum	2 75	
University Press, printing	19 45	
Superintendent's Dept., labour, \$1.70; material, \$33.08	34 78	
Pay lists, wages of cleaners	1,227 63	
		<hr/>
	5,521 67	
Less sundry credits, occasional meals, etc.	71 69	
		<hr/>
		\$5,449 98
(3) 100 Queen's Park:		
Fire extinguishers (\$60.00):		
Superintendent's Dept., material	60 00	
		<hr/>
		\$60 00
		<hr/>
		\$87,831 79

91. *University College Women's Union.*

(a) Maintenance of Building:

Fuel (\$585.88):	
W. H. Cox Coal Co., fuel	\$549 53
Dunlop Coal Co., fuel	16 75
Ridout & Bethune, teaming	19 60
Gas and city current (\$587.10):	
Consumers' Gas Co.	587 10
Water (\$37.51):	
City Treasurer	37 51
Repairs and renewals (\$468.04):	
Superintendent's Dept., labour, \$332.24; material, \$135.80	468 04

 \$1,678 53

Provisions and housekeeping expenses (\$12,728.16):

P. Andrews, cake and pastry	147 46
Armstrong & Spaffard, groceries	1,337 94
Jas. Bamford, fruit, etc.	700 98
J. Blood, groceries	199 85
Belle Ewart Ice Co., ice	20 90
Campbell Flour Mills Co., flour, etc.	130 14
J. B. Ciceri & Co., fruit	74 33
Club Coffee Co., coffee	282 79
Geo. Coles Ltd., confectionery	33 32
M. Doyle Fish Co., fish	70 30
T. Eaton Co., cans, brooms, etc.	10 37
E. B. Eddy Co., matches and serviettes	116 20
Farmers' Dairy Co., milk and cream	1,638 94
Glassco Ltd., jam	292 80
Grand & Toy Ltd., stationery	10 35
Gunns Ltd., butter, meat, etc.	1,674 92
Harris Abattoir Co., meat	2,517 50
H. J. Heinz Co., pickles, etc.	54 42
W. S. Johnston & Co., printing lunch tickets	23 46
McWilliam & Everist Ltd., fruit	7 25
Wm. Neilson Ltd., ice cream	315 88
Patterson & Sons, provisions	861 67
Miss M. E. Pew, eggs	30 00
W. H. Proctor & Co., jam	47 90
F. Simpson & Sons, groceries, etc.	51 26
Students' Book Dept., books	11 00
Telfer Bros., biscuits	14 48
Tupman Thurlow Co., meat	22 00
United Typewriter Co., repairing machine	2 30
Warren Bros. & Co., groceries	576 40
Harry Webb Co., bread	942 38
Whyte Packing Co., provisions	346 01
Miss M. C. Wrong, disbursements:	
Food supplies, \$61.49; utensils, etc., \$9.40; sun-	
dries, \$9.03	79 92
University Press, stationery and printing	19 05

XI. (92) ROYAL ONTARIO MUSEUM.

University's share of maintenance advanced to the Trustees of the Royal Ontario Museum under 2 Geo. V, Cap. 80	\$34,905 64
---	-------------

XII. (93) CENTRAL POWER PLANT.

Fuel (\$122,970.29):	
Britnell & Co., teaming	47 21
Canadian Pacific Railway, car rental	196 00
Century Coal Co., fuel	31,630 47
W. H. Cox Coal Co., fuel	46,337 65
Dunlop Coal Co., fuel	9,971 84
Geo. A. Matthews, repairs to coal-loading machine	55 50
Wm. McGill & Co., fuel	14,075 16
Milnes Coal Co., fuel	5,545 13
Ridout & Bethune, teaming	9,300 06
L. Joslyn Rogers, analysis of coal	40 50
Scott-Millar Coal Co., fuel	3,956 86
Superintendent's Dept., labour, \$1,502.93; material, \$310.95	1,813 91
City Electric Current (\$3,667.35):	
Toronto & Niagara Power Co.	3,667 35
Water (291.80):	
City Treasurer	291 80
Repairs and renewals, engineer's supplies and miscellaneous items (\$7,495.54):	
Canadian Fairbanks-Morse Co., repairs to scales	68 54
Jas. Crow Co., repairs	32 10
Goddard Bros., moving armature	103 25
Inspector of Weights and Measures, inspection	12 00
Mrs. Mary MacDonald, compassionate allowance as widow of employee	330 00
R. Robertson & Sons, work on boilers, etc.	855 75
Toronto Welding Co., welding mains	71 00
Turnbull Elevator Co., shortening cables	10 10

93. *Central Power Plant.*—Continued.

Universiey Press, printing	\$14 50
Petty items (6)	7 15
Superintendent's Dept., labour, \$2,413.20; material, \$3,521.45	5,934 65
Sundry advertisements, re fuel tenders, etc:	
<i>Evening Telegram</i>	12 40
<i>Mail and Empire</i>	18 90
<i>The Globe</i>	12 60
<i>Toronto Daily Star</i>	12 60
Special Alterations, pipe covering and soot blowers (\$9,751.23):	
Diamond Specialty Co., blowers	2,529 57
Superintendent's Dept., labour, \$2,508.64; material, \$4,713.02	7,221 66
Engineers, assistant engineers, firemen and trimmers, (\$13,861.46):	
Chief engineer, Chas Moseley, Jr. 12 months to 30 June ...	2,000 00
Assistant engineers at \$125.00 per month:	
L. McMaster, 12 months to 30 June, \$1,500.00; over- time, 38 hours, \$19.80	1,519 80
J. H. Sandie, 12 months to 30 June, \$1,500 00; over- time, 30 hours, \$15.63	1,515 63
Wm. Smith, 12 months, to 30 June, \$1,500.00; over- time, 34 hours, \$17.71	1,517 71
Firemen at \$100.00 to \$110.00 per month:	
G. O'Connor, 9 months, 5 days, \$1,008.34; overtime, 26 hours, \$11.93	1,020 27
M. Andrews, 8½ months, \$935.00; overtime, 24 hours, \$11.09	946 09
R. H. Cameron, 6 months, 20 days, \$728.95; over- time, 16 hours, \$7.34	736 29
B. Coles, 6 months, 18 days, \$726.98; overtime, 18 hours, \$9.26	736 24
H. Elliott, 4 months, 29 days, \$496.67; overtime, 6 hours, \$2.50	499 17
Wm. McDonald, 4 months	440 00
J. Hand, 14 days	46 67
A. Ford, 8 days	26 67
Trimmers and helpers:	
Sundry labour at \$90.00 to \$100.00 per month	2,856 92
	<hr/>
	\$158,037 67
Less sundry credits	\$160 11
	<hr/>
	\$157,877 56

XIII. (94) CONTINGENCIES AND MISCELLANEOUS.

Hart House: Equipment for Gymnasium and Athletics (\$7620.19):	
American Tent & Awning Co., awning	36 00
Bennett-Wright Co., fulcrums for diving board	93 50
Mrs. A. Brown, fencing jackets	24 00
G. H. Corsan, water wings	32 00
David Davis, piano cover	25 00
Dunlop Tire & Rubber Goods Co., matting	26 59
T. Eaton Co., clocks, etc.	39 00
A. J. Kerns Co., rowing machine	257 80
Rice Lewis & Son, boxing gloves	119 58
Nordheimer Piano Co., piano	400 00
Offie Specialty Mfg., Co., tables, desks and chairs	155 00
A. G. Spalding Bros., boxing gloves	186 25
T. W. Stafford, boxing gloves	30 00
A. T. Twycross, boxing platform	250 00
A. Weller & Co., target rings	18 80
H. A. Wilson Co., floor and wall apparatus	5,718 05
J. Wisdom & Co., boxing gloves	10 42

94. *Contingencies and Miscellaneous.*—Continued.

Superintendent's Dept., labour, \$31.38; material, \$53.66;		
freight charges, \$103.26	188 30	
Petty items (3)	\$9 90	
Alumnae Association Plans (\$750.00):		
J. M. Lyle, in full for plans prepared	750 00	
Chester Massey Portrait (\$1,060.00):		
F. Horsman Varley, fee for portrait (\$1,500. less \$500. paid		
in 1919-20)	1,000 00	
A. J. Boughton, frame	60 00	
Medals (\$141.80):		
Ryrie Bros.	164 30	
Less received from donors	22 50	141 80
President's House, 69 St. George St.. (\$758.75):		
Repairs, etc. (\$421.25):		
Pedlar People Ltd., garage	233 58	
Superintendent's Dept., labour, \$144.09; material,		
\$43.58	187 67	
Fuel (\$337.50):		
CConnell Anthracite Mining Co.	337 50	
Association of Urban Universities, dues	11 39	
Canadian Bank of Commerce, Stationery Dept., title cards ...	9 00	
Dunlop's, flowers for funerals of late Prof. Toews, Dr. Ellis,		
and Senator Dale	90 00	
S. A. Frost, flowers for funeral of caretakers wife (Mrs. Clark)	15 00	
Dr. H. M. Harrison, medical attendance to S. Fowler, injured		
on duty	10 00	
Rous & Mann, printing programmes for Keats Centenary	36 72	
W. S. Johnston & Co., printing tickets for Keats Centenary	7 65	
S. S. Smith, commission on sale of lands, Port Hope	38 75	
Society for the Promotion of engineering Education, subscrip-		
tion	12 57	
Miss E. E. Shaw, engrossing resolution to Dean C. K. Clarke	25 00	
Miss I. M. D. Sutherland, illuminating address to Mr. Chester		
Massey	250 00	
Sir Edmund Walker, Chairman's disbursements for postage etc.	4 68	
National Trust Co., sundry valuations	158 00	
Taxes (\$291.35):		
City Treasurer, adjustments for 1921 on the following		
properties:		
100 Queen's Park	180 52	
1 Queen's Park	47 57	
2 Surrey Place	15 54	
71 St. George St.	20 45	
92 St. George St.	15 07	
94 St. George St.	12 20	
Sundry persons, occasional attendance	14 00	
Small accounts (4)	7 62	
		<u>\$11,312.47</u>

XIV. (95) CAPITAL ACCOUNT CHARGES.

Accountant, Supreme Court of Ontario, twelfth annual pay-		
ment on debenture issue of 1909	25,260 00	
Accountant, Supreme Court of Ontario, sixth annual pay-		
ment on debenture issue of 1915 re-Hart House	5,975 00	
Toronto General Hospital, tenth annual payment on debenture		
issue of 1911, re Pathological Building	6,568 00	
Toronto General Hospital, tenth annual payment on debenture		
issue of 1911, re grant to Toronto General Hospital	15,157 00	
Wardrop Estate, sixth instalment on purchase of house,		
No. 8 Queen's Park	750 00	
Shoenberger Estate, fifth instalment on purchase of house,		
No. 184 College St.	500 00	

95. *Capital Accounts Charges.*—Continued.

Campbell Estate, third instalment on purchase of house, No. 100 Queen's Park	\$720 00	
Purchase of Beatty leasehold, City Treasurer, taxes, 1921	468 67	
Repayment to Endowment on account of advance for con- struction of Central Power Plant (written off Asset valua- tion)	20,208 00	
		<u>\$75,606 67</u>

XV. (96) SPECIAL COURSES FOR RETURNED SOLDIERS.

R. E. L. Kittredge, for instruction given in 1918-19	\$375 00
--	----------

XVI. (97) SPECIAL RESEARCH.

Applied Science.

Chemical Engineering (\$3,787.18):

Research Assistants:

R. C. Cantelo, 1 October, to 30 June	1,800 00
Geo. E. Gollop, 15 December, to 16 June	1,100 00
C. S. Adams, 2 months (paid also in Department) ...	400 00
H. C. Soehner, 2 months (paid also in Department) ...	300 00

Expenses (\$187.18):

Canadian Laboratory Supplies, chemicals	145 00
Central Scientific Co., tubes	24 40
National Electro Products Ltd., hydrogen	14 34
Ontario Rubber Co., tubing	3 44

Civil Engineering (\$3,079.08):

Research Assistants:

A. R. Duff, 15 December, to 30 June	1,300 00
W. L. Sagar, 1 January to 30 June (paid also in De- partment)	600 00
W. B. Dunbar, 2 months (paid also in Drawing)	350 00
C. A. Hughes, 1 month (paid also in Department) ...	100 00

Expenses (\$729.08):

Aikenhead Hardware Ltd., hardware	22 17
Allen Bros., sand	21 00
Art Metropole, paper	7 92
Britnell & Co., cement	24 28
John Brown, labour, 125 hours at 40 c.	50 00
City of Toronto, Dept. of Works, limestone	16 80
A. R. Duff, petty disbursements	12 71
Grand & Toy, paper	1 70
Wm. & J. G. Greey, castings	28 81
C. C. Hommon, photo	5 64
C. A. Hughes, petty disbursements	11 67
McGregor & McIntyre, steel	7 14
Photography, Dept. of, slides	9 67
O. H. Pierce, calculating machine	400 00
R. Robertson & Sons, stone, etc.	79 28
W. S. Tyler, screen	15 75
Superintendent's Dept., labour, \$19.70; material, \$29.34	49 04

763 58

Less balance of 1919-20 advance—returned by Professor
Gillespie

34 50

729 08

Electrical Engineering (\$5,715.53):

Research Assistants:

C. K. Duff, 1 July, to 30 April	1,500 00
C. R. Hill, 1 October to 30 June	1,125 00
W. C. C. Duncan, 1 July to 21 September at \$100 per month, \$270.00; 1-30 June, \$110.00	\$380 00

97. *Special Research.*—Continued.

G. F. Tracy, 2 months	\$220 00
Mechanician, J. W. Lawson, 12 months to 30 June (paid also in Department)	800 00
Expenses (\$1,690.53):	
British Aluminum Co., aluminum	3 26
Canadian General Electric Co., lamps	5 29
Canadian Kodak Co., films	7 58
Canada Metal Co., lead pipe	1 13
Canadian National Carbon Co., batteries	54 82
H. S. Clark, valve	8 00
A. & F. Fisher, copper wire	6 12
General Radio Co., apparatus	557 04
Geo. Green Welding Co., welding tubes	7 00
Instruments Ltd., galvanometer	120 00
Wm. L. Laurie, valve	6 00
Northern Electric Co., apparatus	83 50
Photography, Dept. of, slides	26 21
Chas Potter, charts	2 75
Prof. H. W. Price, petty disbursements	12 81
Students' Book Dept., books	22 80
Vimy Supply Co., transformer	7 50
Weston Electrical Instrument Co., apparatus	695 72
Superintendent's Dept., freight, etc., \$30.44; labour, \$7.08; material, \$25.48	63 00
Engineering Physics (\$971.51):	
Canadian General Electric Co., search-light	267 96
Consolidated Optical Co., lens	61 80
Edison Swan Electric Co., lamps	46 74
Adam Hilger Ltd., micrometer	552 26
Superintendent's Dept., cable, \$3.51; freight, etc. \$22.84; labour, \$12.55; material, \$3.85	42 75
Mechanical Engineering (\$3,045.77):	
Research Assistants:	
J. H. Parkin, 1 July to 30 September (paid also in Department)	500 00
H. C. Crane, 3½ months at \$100	350 00
E. V. Ahara, 2 months	200 00
J. S. MacAllister, 2 months	200 00
L. Galbraith, 2 weeks	50 00
Expenses (\$1,745.77):	
Aikenhead Hardware, hardware	24 07
Prof. R. W. Angus, purchase of sundry supplies	29 53
Art Metropole, tracings	5 58
Atlas Engineering & Machine Co. Ltd., graduating plates	3 75
Brigden's Ltd., prints and diagrams	152.95
F. G. Ericson, turnbuckles	4 90
S. L. Galbraith, drafting	23 20
F. Hickey, machine work, 177 hours at 85c (paid also in Department)	150 45
Macey Office Equipment Co., stools	22 00
Photography, Dept. of, slides	27 28
H. V. Short Hardware Co., micrometers, etc.	143 80
S. K. F. Industries, freight	1 39
Standard Pattern Works, aerofoil models	247 45
Students' Book Dept., subscriptions	34 75
C. H. Taylor, meters, etc.	538 89
University Press, stationery	9 80
Superintendent's Dept. freight, \$2 94; labour, \$209 38; material, \$113 66	325 98
Mining Engineering (\$820.01):	
Research Assistant, B. F. Hannan, 2 months	250 00

97. *Special Research*.—Continued.

Expenses (\$570.01):

Albany Pump Co., machinery	154 02
Baines & David, steel	4 49
Geo. C. Cooper, grinding	11 50
Dewey & Almy Chemical Co., lime	4 81
Driver-Rarris Co., nicrome ribbon	5 74
F. C. Dyer, petty disbursements	12 08
Gregory Electric Co., motor	35 66
F. Hickey, pole-pieces	56 45
Lever Bros., oxygen	4 08
G. E. Leworthy, glass blowing	4 65
W. R. McKee, apparatus	51 25
Jas. Morrison Brass Mfg. Co., gauge	4 14
Norton C., tubes, etc.	24 78
Ontario Rubber Co., tubing	7 29
J. G. Ramsey & Co., films, etc.	29 57
Geo. A. Ready, apparatus	3 50
Robt. Simpson Co. Ltd., motor	14 90
Singer Sewing Machine Co., machine parts	3 29
Tallman Brass & Metal Ltd., discs	28 31
Van der Linde Rubber Co., rubber rings	31 18
Petty items (2)	2 45
Superintendent's Dept., freight, \$2.05; labour, \$31.78; material, \$42.04	75 87
General Expenses (\$1,990.00):	
University Press, Bulletin No. 2	1,990 00

 \$19,409 08
Medicine.

W. Cowan, laboratory attendant, 9 months at \$75.00; 3 months at \$83.33	925 00
Miss Violet A. Gillett, artist's services	125 00
Apparatus and supplies (\$1,732.43):	
Allen Mfg. Co., laundry	6 48
Edward Bind, drawings	142 50
J. F. Hartz Co., syringes	20 58
Hudson-Parker, towels, etc.	16 52
Ingram & Bell, chemicals and surgical instruments	202 15
Masco Co. Ltd., hair dryer	25 00
Geo. B. Meadows Ltd., cages	1,085 62
Photography, Dept. of, slides	17 85
Physiology, Dept. of, making calorimeters	15 00
Dr. D. E. Robertson, disbursements:	
Laboratory supplies, etc., \$35.65; balance from 1919-20, \$7.86	43 51
F. L. Robinson, making calorimeters	15 00
Rubber Products Co., calorimeters	34 14
N. B. Taylor, travelling expenses (Akron)	71 10
Superintendent's Dept., labour, \$35.10; material, \$1.88	36 98
Animals and keep, (\$358.00):	
A. O. Bennett, animals	8 25
R. Johnston, animals	44 00
John O'Donnell, dogs, \$18.00; care of dogs, \$193.60	211 60
Dr. D. E. Robertson, animals purchased	94 15
Pathological Chemistry:	
O. H. Gaebler, Research Assistant, 1 month (paid also in Department)	200 00
Psychiatry:	
Research Assistants:	
Miss M. Rathbun, 2 months, 18 days, at \$65.00 per month	169 00
Miss B. M. McCreary, 2 months, 17 days, at \$65.00 per month	166 85
W. E. Blatz, 1 month	85 00

97. *Special Research.*—Continued.

Expenses (\$74.35):	
A. E. Docherty & Co., adding machine	\$20 12
Hardware Co., of Toronto, rule	2 00
C. H. Stoelting Co., tuning fork	52 23
	\$3,835 63
<i>Anatomy.</i>	
Dr. Herbert G. Wilson, Research Assistant	250 00
Expenses (\$442.45):	
Dodge Mfg. Co., steel roller	12 18
Grand & Toy Ltd., guides	1 25
Hynson, Westcott & Dunning, colours	17 36
Ingram & Bell, chemicals	52 37
Prof. J. P. McMurrich, petty disbursements	20 94
Sanderson, Percy & Co., shellac	16 83
Photography, Dept., of, slides	13 85
Spencer Lens Co., apparatus	94 67
Williams & Wilkins, subscription	3 75

John A. Brashear Co., camera lens	300 00
	\$300 00
<i>Bio-Chemistry.</i>	
G. H. Berkeley, Research Assistant, 1 month (paid also in Research, Botany)	100 00
Expenses (\$870.60):	
AnSCO Co., cotton	2 62
Barnett's Antiques, kettle	15 00
Canadian Laboratory Supplies, chemicals, etc.	186 26
Central Scientific Co., Apparatus	73 31
Eastman Kodak Co., chemicals	50 46
T. Eaton Co. Ltd., carbonate of soda	4 00
Eimer & Amend, apparatus	49 75
General Chemical Works, chemicals	46 54
Emil Greiner Co., apparatus	151 18
International Equipment Co., freight	3 92
Lamotte Chemical Products, chemicals	50 58
Lyman Bros. & Co., chemicals	2 80
McKay School Equipment Ltd., apparatus, etc.	68 15
Merck & Co., chemicals	21 89
Musher & Co., flour	2 92
National Drug & Chemical Co., chemicals	5 43
Palo Co., apparatus	72 61
Wm. Rennie Co., seeds	2 70
Will Corporation, tubes	17 38
Superintendent's Dept., labour	43 10
	\$970 60
<i>Biology.</i>	
Assistant Professor, W. A. Clemens, (share of salary charged to Research—see Faculty of Arts)	2,000 00
Technicians:	
Miss M. Maitland, 181 hours at 65c.	117 65
N. B. Laughton, 66 hours at 65c.	42 90
Miss E. Logier, 33 hours at 75c.	24 75
J. E. Bates, 30 hours at 75c.	22 50
W. B. Ririe, 3 hours at \$1.00	3 00

97. *Special Research.*—Continued.

Expenses (\$3,899.79):

H. A. Ball, pails	\$4 04
C. Melvin Bartlett, nets	7 20
Beaver Brass Mfg. Co., brass buckets, etc.	36 35
W. R. Brock Co., cotton	6 79
Buffalo Apparatus Corporation, chemicals	58 52
Canadian Laboratory Supplies, apparatus	153 01
Canadian Numbering Machine Co., machine	18 40
M. E. Carson, specimens	16 22
City of Toronto, Parks Dept., monkey	20 00
Prof. W. A. Clemens, Fisheries Research in Lake Nipigon: Travelling expenses, \$207.65; board for assistants, \$193.30; express on equipment, \$126.01; boat hire, \$101.10; labour, \$67.50; supplies, \$54.44	750 00
F. Conley, cartage	4 50
Dennison Mfg. Co., tags	12 07
Eastman Kodak Co., alcohol	18 53
T. Eaton Co. Ltd., hardware, etc	65 55
Freyseng Cork Co., corks	19 18
General Biological Supply House, chemicals	28 39
Geological & Natural History Survey, apparatus	57 83
Wm. & J. G. Greey, cloth	39 18
J. Hallam, compass	4 28
J. F. Hartz Co., apparatus	120 92
Geo. M. Hendry Co., stoppers	6 45
A. Hoover & Son, fish	12 00
Hughes-Owens Co., instruments	4 12
Dr. Martin Knudsen, thermometer frame	11 14
Kny-Scheerer Corporation, forceps	11 00
John Leckie Ltd., nets and ropes	420 36
Lyman Bros. & Co., chemicals	101 17
Geo. B. Meadows, cages	470 28
National Drug & Chemical Co., chemicals	34 67
Negretti & Zambra, thermometers	40 85
Office Specialty Mfg. Co., cases	5 97
Ontario Cork Co., corks	3 18
Ontario Rubber Co., tubing	10 65
W. H. Piersol, petty disbursements	3 15
J. G. Ramsey & Co., plates	22 90
Rice, Lewis & Son, hardware	3 13
Richards Glass Co., vials	34 30
Scientific Materials Co., chemicals	13 15
Robt. Simpson Co., locks, etc.	10 75
Spencer Lens Co., apparatus	26 30
Stanyon Sales Co., vials	23 34
Toronto Dog & Cat Hospital, animals	53 40
Toronto Produce Co., fodder	5 85
Prof. E. M. Walker, expenses detailed under Special Re- search, Botany	100 00
Whitall-Tatum Co., chemicals	87 62
Will Corporation, apparatus	410 80
University Press, stationery	10 50
Petty items (6)	11 87
Superintendent's Dept., freight, \$34.76; labour, \$268.13; material, \$207.04	509 93

 \$6,110 59
Botany.

Assistant Professor, H. B. Sifton, 12 months to 30 June	2,500 00
Research Assistants:	
A. R. Walker, 4 months at \$100 (Paid also in Department)	400 00
Miss Clara W. Fritz, 1 month at \$100; 5 months at \$50.00	350 00
G. H. Berkeley, 1 month, paid also in Research, Bio- Chemistry)	100 00

97. *Special Research.*—Continued.

Clerical Assistants:

P. A. Matthews, 10 weeks at \$25.00	\$250 00
Miss Roberta Dinsmore, 3 weeks at \$20.00	60 00
Miss M. Winterbottom, 1 week	25 00

Expenses (\$3,303.08):

Art Metropole, microscopes, etc.	625 64
I. L. Conners, petty disbursements	5 71
Miss Evelyn Criddle, seeds	39 00
Julien P. Friez & Sons, paper	6 38
Ingram & Bell, apparatus	395 81
Kny-Scheerer Corporation, illuminator	61 12
Lake Simcoe Ice Supply Co., ice	18 00
McKay School Equipment Ltd., apparatus	33 96
Pringle & Booth, photos	16 20
J. G. Ramsey & Co., plates	85 52
Mrs. J. E. Ridgway, colour standards	11 21
Spencer Lens Co., microscopes, etc.	1,055 45
St. Mary's College, plant illustrations	40 58
Prof. R. B. Thompson, expenditures re Joint Expedition, 1921, with Prof. E. M. Walker:	
Travelling expenses, \$359.19; gasoline and car acces- sories, \$159.99; hotel expenses, \$72.08; supplies, \$52.69; provisions, \$23.86; sundries.	
\$36.81	\$704 62
Share charged to Special Research, Biology, \$100; charged to 1921-22.	
\$104.62	204 62
Topley Co., apparatus	245 16
Toronto Hydro-Electric System, heaters	15 80
Will Corporation, laboratory supplies	117 49
Superintendent's Dept., freight, \$2.95; labour, \$1.61; mater- ial, \$25.49	30 05

 \$6,988 08
Chemistry.

Associate Professor, John B. Ferguson, 12 months to 30 June	3,800 00
Research Assistant, Electro-Chemistry, J. Kellcher, 1 October to 31 May (paid also in Department)	500 00
Expenses (\$683.26):	
Canada Flint Glass Co., apparatus	9 60
Canadian Laboratory Supplies, incubator, etc.	155 65
Dental Co. of Canada, blowpipe	5 24
L'Air Liquide Society, oxygen	19 77
Leeds & Northrup Co., galvanometer, etc.	21 48
W. R. McKee, apparatus	55 00
Port Hope Sanitary Mfg., Co. Ltd., sink	16 67
Rogers Electric Co., relays	12 12
Spencer Lens Co., apparatus	308 40
Thermal Syndicate Ltd., tube	2 83
H. C. Tugwell & Co. Ltd., plates	14 18
Volta Mfg. Co., apparatus	8 73
Hiram Walker & Sons Metal Products Ltd., wire	30 70
Superintendent's Dept., freight, \$7.05; labour, \$12.24; mater- ial, \$3.60	22 89

 \$4,983 26
Geology.

Prof. A. P. Coleman, disbursements re Summer Expedition, 1920:	
Travelling expenses, \$525.05; hotel expenses \$251.25; sup- plies, \$49.50; sundries, \$33.90	\$859 70
Less charged to 1919-20 appropriation	800 00
Photography, Dept. of, prints	59 70
	16 73

 \$76 43

97. *Special Research.*—Continued.*Mineralogy.*

Research Assistant, E. W. Todd, 1 October to 30 April (paid also in Dept. of Chemistry)	\$1,750 00	
Expenses (\$1,656.76):		
Bausch & Lomb Optical Co., microscope, etc	346 62	
Eastman Kodak Co., chemicals	20 03	
T. Eaton Co., Ltd., pump, etc	10 90	
Robert Elder Carriage Works, body for car	36 05	
A. D. Gorrie & Co., Ford Car and accessories	816 03	
Ingram & Bell, bottles	17 22	
Kent's Ltd., prism	8 00	
Lyman Bros. & C. Ltd., chemicals	41 04	
Office Specialty Mfg. Co., sections	65 69	
D. Pike Co., tent, bags, etc.	73 74	
J. G. Ramsey & Co., filters and plates	28 23	
Ritchev Supply Co., powder	2 99	
Prof. T. L. Walker, disbursements re field work:		
Hotel expenses, \$53.85; car accessories, \$26.37; supplies and sundries, \$19.78	100 00	
G. Ross Workman, drafting	25 00	
University Press, stationery	3 95

APPENDIX V.

Superintendent's Stores and Sundry Labour Account

Ledger balance, 30 June, 1920	\$13,297 36
Purchases made during 1920-21:	
Adams Furniture Co., stools	78 75
Advance Oil & Supply Co., oil, etc.	137 48
Aikenhead Hardware Ltd., hardware	1,929 39
Anatomical Dept., methylated spirits	6 65
Art-Way Products Co., varnish	97 20
J. Austin & Sons, lumber	47 98
Autocall Co., signals	19 68
Automatic Telephones & Time Recorders, Ltd., telephones	91 01
Babcock & Wilcox, Ltd., piping	178 54
Baines & David, electrical supplies	18 17
Barrett Co., pitch	144 00
Wm. Bartlett & Son, shades	59 30
Batts, Ltd., lumber	574 26
Beardmore Belting Co., belting	145 00
A. C. Biggar, key blanks	18 88
Bird & Son, roofing material	38 41
Boeckh Bros., brushes	223 21
Booth Coulter Copper & Brass Co., plumber's supplies	18 28
British Aluminum Co., aluminum	9 76
W. R. Brock Co., towels	74 85
Brown's Copper & Brass Rolling Mills, copper	343 76
Builder's Moulding Co., lime, cement, etc.	111 60
Robt. Bury & Co., lumber	2,120 05
W. Calder & Son, tools	5 75
Canada Brokerage Co., soap	155 24
Canada Hardware Co., hardware	2,504 24
Canada Metal Co., bronze	33 62
Canadian Asbestos Co., asbestos	56 56
Canadian B Tower & Forge Co., motor	567 12
Canadian Fairbanks-Morse Co., steel cases	10 56
Canadian Fish Co., belt hooks	17 19
Canadian General Electric Co., electrical supplies, cable wire, plates, etc.	18,984 41
Canadian Germicide Co., soap	85 82
Canadian Ice Machine Co., lime, etc.	21 65
Canadian Johns Manville Co., roofing blocks	3,496 90
Canadian Laboratory Supplies, supplies	10 10
Canadian Machinery Co., saw bits	430 14
Canadian Powers Regulator Co., regulators, etc.	51 38
Canadian S.K.F. Co., bearings	32 13
John Catto & Son, towels, etc.	231 00
Central Electric Supply Co., electrical supplies	536 43
Central Ornamental Glass Co., clock dials	64 64
Common Sense Mfg. Co., rat poison	8 48
Consolidated Plate Glass Co., glass	616 50
Cooke & Boulton, beeswax	97 06
Crane, Ltd., piping	3,328 71
Crescent Concrete Paving Co., cement	245 00
Jas. Crow Co., repairs	7 00
W. H. Cunningham, glue	63 57
Crucible Steel Co., rods	6 46
Davis Slate & Mfg. Co., slate	89 40
Dean Bros. bronze plating	19 51
Wm. S. Dean, locks	21 01
Dearborn Chemical Co., chemicals	261 77
Department of Soldiers' Civil Re-Establishment, gasoline ..	40 40
Diamond Cleanser Mfg. Co., cleanser	25 01
Dodge Mfg. pulleys, etc.	75 57
Dominion Carbon Brush Co., brushes	19 68

Superintendent's Stores and Sundry Labour Account.—Continued.

Dominion Radiator Co., plumbers' supplies	\$1,546 71
C. A. Dunham Co., plumbers' supplies	1,756 70
Dunlop Tire & Rubber Goods Co., rubber hose	625 28
Eagle Lock Co., locks	947 05
T. Eaton Co., cloth, etc.	390 31
Eby-Blain, Ltd., soap	47 02
E. B. Eddy Co., matches	927 83
J.H. Edmunds Co., reflectors	17 68
Electric Insulations & Varnish Co., varnish	165 79
Ely Bros., charcoal	54 40
Factory Products, conduits electrical supplies, etc.	5,535 36
A. D. Fisher Mfg. Co., motor	277 75
Garlock Packing Co., packing	298 63
Good Mfg. Co., plumbers' supplies	165 39
Goodyear Tire & Rubber Co., hose	35 45
Gordon MacKay Co., towels	78 57
Gurney Foundry Co., grate box	15 76
T. H. Hancock, lumber	5,013 99
E. Hansard, caning chairs	5 50
Hardware Co. of Toronto, hardware	606 66
F. C. Henderson, glass	14 40
Geo. M. Hendry Co., beaver board, etc.	552 34
Henry Engineering Co., fuses	297 35
Hersey Mfg. Co., rubber disc	7 64
Interlake Tissue Mills, towels	1,683 78
Johnston Temperature Regulator Co., valves, etc.	47 10
A. M. Judd, lamps, etc.	7,000 97
Lagonda Mfg. Co., steel cutters, etc.	7 51
R. Laidlaw & Co., lumber	531 83
Lancashire Dynamo & Motor Co., motor	103 00
J. Leckie, lime	39 57
John Lindsay, cinch anchors	23 75
J. T. W. Low, chair pads	8 00
A. R. Lundy, fence	225 38
Lyman Bros. Co., chemicals	148 17
McClary Mfg. Co., pipe	338 99
McCull Bros. oil	780 51
N. Macdonald, paper	26 90
McDonald & Wilson, lighter	175 50
McFarlane Mfg. Co., ladders	130 36
McKay School Equipment Co., settees, etc.	2,728 48
W. R. McKee, electrical work	11 50
D. K. McLaren Ltd., belting	10 30
Martin Sales Agency, towel machine, etc.	67 63
Masco Co., lugs	25 52
Geo. A. Matthews, motors, etc.	523.93
Matthews Bros., moulding	25 33
Geo. B. Meadows Co., baskets, etc.	179 24
Medland Bros., cleanser	41 85
Merck & Co., chemicals	73 73
Monarch Brass Mfg. Co., topping machine	30 45
J. H. Morin & Co., glue, etc.	52 12
J. H. Morrison, cement	7 58
Jas. Morrison Brass Mfg. Co., piping, etc.	8,597 19
Mott Co., sinks, etc.	100 71
A. Muirhead Co., paints	171 76
Murphy Iron Works, grate bars	1,296 00
Murray-Kay Co., cork carpet	425 32
North American Incinerator Co., trough	38 38
Northern Electric Co., electrical supplies	2,465 09
Ohio Varnish Co., varnish	17 03
Oil of Joy Mfg. Co., polish	18 18
Ontario Foundry Co., castings	204 27

Superintendent's Stores and Sundry Labour Account.—Continued.

Ontario Lime Co., piping	\$631 76	
Ontario Rubber Co., rubber tips	12 76	
Ontario Soap & Oil Co., soap, etc.	569 40	
Otis-Fensom Elevator Co., elevator supplies	529 07	
Panels Ltd., panels	62 31	
Pathological Dept., alcohol	7 89	
Pease Foundry Co., fire pot	56 85	
Peckover's Ltd., steel	1,043 50	
Perfection Sanitary Brush Co., brushes	99 08	
N. L. Piper Railway Supply Co., lanterns and supplies	91 98	
Queen City Brass Co., castings	132 06	
Queen City Glass Co., glass	15 15	
Reid & Brown Structural Steel & Iron Works, rollers	356 22	
Renfrew Electric Products Co., heater	205 59	
T. G. Rice Wire Mfg. Co., wire guard	12 50	
Rice, Lewis & Son, hardware	148 33	
R. Robertson & Sons, fire brick	7 00	
Roofers' Supply Co., roofing	2,547 15	
Sanderson, Pearcey & Co., glass, paint, etc.	5,482 27
